Government housing in England, according to all accounts, has proved a huge success. In Germany and other European countries, the housing of state employes by the state has for long been practiced with excellent results, and, in some cases, set up such models of good housing as to level up the general public standard in this matter. England, after pioneering in various other forms of public provision for meeting the lack of houses, was forced during the war to adopt the continental plan for employes in state munition plants. Side by side with this direct provision, however, the other tried methods also have been used to their full capacity. Anyone who would suggest in England today that the housing of employes in private munition plants and shipyards might be left to private employers with, perhaps, a little financial aid from the Treasury, would be greeted with derision. The thing has become as vital a public concern as the equipment of the army itself.

It is not intended here to plead for direct government housing in the United States as against any of the other possible means of financing and carrying out housing schemes for war workers. The success of His Majesty's Office of Works cannot be duplicated here by simply appointing a housing commissioner with similar powers. This article is intended rather as a plea for openmindedness in the discussion of the various possibilities. It would be wasteful to neglect any of the channels through which good housing schemes have come into existence in the past few years; and among these the housing enterprise of large employers for their own employes has taken a prominent place. On the other hand, here as in England, the economic situation operates in opposition to a great extension of such enterprise. Even with a liberal federal loan system, there is no reason to believe that the need for more houses can entirely be met in this way.

If English experience has any value at all for us in this matter, it seems clearly to point in the direction of the nation itself shouldering a burden which has become too heavy to be carried by employers and individual communities alone.

### HOME SERVICE

## The WORK of the AMERICAN RED CROSS in the UNITED STATES

By W. Frank Persons

DIRECTOR GENERAL CIVILIAN RELIEF

EN may be the best soldiers in the world, but if things are not well with their families at home they lose efficiency through worry, and the morale to fail. Every report from the training camps and from the French front mentions the excellent spirit of our troops. Will they maintain this morale while thousands of miles from home, through trench life and battle, to the victorious end?

It is regarded by the American Red Cross as the partiotic, duty as well as the humanitarian opportunity of its Home Service workers to care for the lonely families of our fighting men. It is to be remembered that they soon will be "fighting men" in real earnest. Not only our enemies, but our allies, and the American people as well, will be watching them. They must be encouraged to "carry on" without faltering. Their families must not be allowed to bear personal privation and so to double the willing sacrifices they have made.

To our soldiers and sailors the Red Cross means hospitals, doctors, and nurses when they are sick or wounded; hospitality and recreation when off duty in France or at American cantonments. To their folks at home the Red Cross must mean, no less surely, the neighborly counsel and aid which will keep them in good spirits, health and comfort. The Home Service of the Red Cross must be the nation's assurance that no enlisted man's family shall suffer for any essential thing that it is within its power to give.

More than this lies within the opportunity and duty of Home Service workers. They must help the family to keep pace in ambition and achievement with the man who is surrounded, often, with new chances for education and advancement. One Home Service section is caring for the large family of a naturalized citizen who enlisted as a private, but is already top sergeant. He has made good in a renarkable fashion. It is obvious that he would be disheartened and discouraged if he should return to find his family in the same forbidding home life in which he left them. They have been moved to pleasant, comfortable quarters. The wife and children will have the recreation and the advantages which will assure a home life worthy of this soldier's ideals when he comes back.

The Home Service work of each Red Cross chapter involves the definite and serious responsibility of safeguarding the welfare of broken homes, of eliminating so much as possible of the unfortunate social consequences of war, and of helping to maintain the morale of our fifething forces themselves.

In this program of Home Service the Red Cross has been cager to enlist the services of all in this country who are engaged and interested in social work. This desire has not been disappointed. Everywhere the churches and schools, the hospitals, the medical profession and the many social agencies have contributed generously to the success of Home Service. Particular mention should be made of the services so freely given by trained social workers. They have come from every field. The number is every day increasing. They all work under the Red Cross flag.

No attempt has yet been made, as should some time be done, to write the muster roll of those who have so earnestly rallied to this patriotic service. But in one field, the facts, in part, are at hand: The Charity Organization Department of the Russell Sage Foundation has asked each charity organization society in the United States to supply a list of staff workers, members of their central boards, and other volunteers who have been engaged in Home Service for the Red Cross. The replies from 151 societies show that they have contributed 404 workers to this work, of whom 181 were taken from the paid staff of the societies. In addition, 202 other workers were engaged in other Red Cross activities, so that out of a

total of 912 persons reported by these charity organization societies as engaged in war service, 606 were engaged in Red Cross work.

The Red Cross gratefully acknowledges the invaluable assistance not only of the trained personnel of social agencies who have entered its service, but also of the regular work of these agencies themselves. It is realized that their equipment and experience and skill must be utilized in the work of Home Service, and that their work must not be weakened or duplicated. The Red Cross knows perfectly well that social agencies must be maintained in full efficiency and their resources augmented, both now and after the war. No matter what the Red Cross may be able to do, their problems will be greater than they have been as the war goes on, and when it is over broken families and shattered men unable to pursue their usual occupations will increase social problems.

The present emergency of war should be made the occasion for the building up of a much larger membership for social agencies than has yet existed. It is believed that this is possible and probable, because many in each community are now conscious of a social responsibility not recognized before. The number of givers to war charities, especially of small givers, is increasing. The number of those giving volunteer service in many patriotic societies is rapidly growing, also, and in this lies the greater assurance of a wider, permanent and

intelligent interest in the maintenance of social 'welfare through public and private effort.

With grateful acknowledgment of the help of social workers from every field and in the desire that their work shall flourish, the American Red Cross, at its annual meeting on December 12, adopted the following resolution:

"The members of the American Red Cross, assembled at their first annual meeting since their country entered the war, express their deep appreciation of the support given to the national society by the local charities of the country.

"Great hospitals have given up their skilled staffs to national service; organized charity has contributed its most experienced and efficient leaders. The regular supporters of local charities have been among the largest contributors to the Red Cross war fund. The resources of our home charities must not be hereby diminished. It is more essential now than ever before to maintain them to their full efficiency.

"We know that this means larger giving both of service and money. But we are confident that the American people are ready to make the greater sacrifice. Red Cross needs abroad must be supplied, but not by withdrawing support from the needs of charity at home."

In short it is the earnest hope of the Red Cross that existing agencies doing useful work shall have increased membership and larger resources and become much more influential in their respective communities.

## COMMUNITY CELEBRATION OF THE CAPTURE OF JERUSALEM

THE CRUSADERS by Gade, rendered by the University Oratorio Society of lows with its one hundred voices and orchestra of forty, was made the occasion of a community conservation to social service. The oratorio was performed before a large audience, in which Jews and Geniller, Catholics and Protestants, different national groups and patriotic orders had ceremonial representatives. Seated in the Front were the Catholic priests, the Protestant pastors, the Jewish delegates, And marching in Juli regalia came the Masson, whose order dates back to the building of Solomon's temple, followed by the Knights of Common Corpt, the D. A. R., and the Catholic priests, of the Magnetic Corpt, the D. A. R., and the Catholic Protection of the Catholic Protection of the Magnetic Corpt, the D. A. R., and the Catholic Protection of the Magnetic Corpt, the D. A. R., and the Catholic Protection of the Magnetic Corpt, the D. A. R. and the Catholic Research of the Magnetic Corpt, the D. A. Cantolic Color the Catholic Corpt, the Catholic Corpt, the Catholic Common of the State University, toth its six hundred and sixty-six stars for the men who have gone forth, two unfurled.

#### MILLION GOVERNMENT RAILWAY MEN

BOUT one and one-half million railway employes, including the 400,000 members of the four brotherhoods, on January 1 came into relations with the government that must profoundly change their industrial status. Whether they will be considered as government employes remains to be seen, but it is evident that their rights and obligations must be profoundly affected by the action of President Wilson in taking over the direction and control of the railways of the country.

The government has never before been confronted with a labor problem of such magnitude. The post office em-ployes, hitherto the largest single group, are numerically of far less importance. For another reason the situation with which William G. McAdoo, the director-general of railroads, will be confronted is quite different from that which Mr. Burleson is facing in the post office. Unionism is just getting under way in the post office; it is hesitant and uncertain of its rights. Mr. Burleson fears and opposes its extension and decries the effort to secure a wage advance for men who have not had a raise in ten years [the SURVEY for December 22].

There are a dozen or so organizations of railway employes, all of which have acquired the habit of making more or less peremptory demands from time to time. The 400,000 members of the four great brotherhoods have had several wage increases in the last ten years and demands for a further increase are now pending. Furthermore, they come with all the prestige and confidence bred of successful experience in dealing with the railway executives, culminating in their successful coup of 1916 which led Congress to enact the Adamson law [see the SURVEY for September 9, 1916, p. 577, and article by John A. Fitch in the SUR-VEY for September 16, 1916, p. 599].

That the brotherhood chiefs will recognize that different policies must be adopted under the new regime is generally believed. The postal unions frankly

concede that they have no right to strike. Whether or not the same view is taken by the railway unions, their future tactics and the attitude of the government toward them will be interesting to watch. In a statement given out on December 29, Mr. McAdoo, in addition to providing for joint use of terminals and rolling stock by the different roads, had the following to say in regard to employment: 'Any officer, agent or employe desiring to retire from his employment shall give the usual and seasonable notice to the proper officer to the end that there may be no interruption or impairment of the transportation service required for the successful conduct of the war and the needs of general commerce."

A few figures may serve to indicate the size of the new responsibility undertaken by the government. The total railway mileage in the United States, counting double-track roads as single lines, is in excess of 255,000 miles. There are, in the whole of Europe, only 215,000 miles of railway lines, and the largest state railway system in any single country in the world is that of Germany with a total length of about 36,600 miles. There are about 687,000 miles of railway lines in the world, of which 224,000 miles are state owned.

Kirby in New York World

UNCLE SAM'S NEW UNIFORM

#### HOUSES FOR SHIPYARD WORKERS

E DWARD N. HURLEY, president of the Emergency Fleet Corporation and chairman of the Shipping Board, has published a letter addressed by him to Senator Fletcher, chairman of the Senate Committee on Commerce, in which he requests an appropriation of \$35,000,000 for the erection of houses at shipyards. The Emergency Fleet Corporation disposes over \$10,000,000 for the building of workmen's houses at the three government plants. The new sum asked for is for the building of houses at private yards.

The Shipping Board intends to supervise the construction of these houses, but to leave their erection to private concerns lending them the funds necessary for that purpose at 4 per cent. Quaintly, the electric lighting of the shipvards to permit night work is mixed up with the housing proposition and is to be dealt with in the same way and from the same appropriation.

The proposals of the Shipping Board are based upon the advice of the War Industries Board's Committee on Housing, of which Otto M. Eidlitz, of New York, is chairman, and upon that of the board's own advisory committee "which thoroughly investigated housing conditions at the shipyards and recommended some action toward relieving the situa-Whether Mr. Hurley's plan exactly represents the recommendations of the two advisory committees is not clear from his communication. That the huge sum asked for is not all to be spent upon company houses of the familiar uninspiring type appears from the following paragraph of the letter:

"We are treating the housing proposition from a very broad viewpoint, and in all cases where community sites are being planned are providing all the social, moral and artistic features that will add to the social, moral and physical well-being of the shipbuilding employes. who will live in these communities. While protecting the investment of the government, we are also adjusting the

### We Must "Follow-Up"

The story of the Gallipoli withdrawal is a tale of inadequate apport. Like Salamanders clinging upport. Like Salamanders clinging upthe red-hot bars of a fiery furnace, the boys of Australia and New Zealand clung to the slopes of Anzac. Desperately, heroically they clung. No troops under any circumstances ever displayed greater soldierly qualities or upheld more sacredly the best traditions of England's Army. But they had to withdraw because the "follow-up" was not there.

To some of us it has been given to march with the columns of troops that go to France. And to others it is given to wave Godspeed. But he who marches and he who stays is equally a citizen of the world's mightiest republic and equally responsible for its success in this greatest of undertakings.

Then let us at home turn from our flag waving and consider how necessary we are, how useful we must be. Those who go to fight cannot hope to win by naked bravery and we cannot hope to win unless every individual at home does all he can. We must have no Gallitoil.

The Bell System is only one of the myriad great and small industries which are co-operating that nothing be left undone to keep a constant, efficient stream of men, guns, ammunition, food, clothing and comforts flowing to the front.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY AND ASSOCIATED COMPANIES

One Policy

One System

Universal Service

rents, purchase terms, etc., on such a basis that they will be within normal reach of the men who will occupy these houses."

The letter confirms the general picture of insufficient housing accommodation given in another part of this issue. For instance:

"Baltimore, which is about ten miles from the shipyards (at Sparrows Point) is cooperating with the United States Shipping Board to the fullest extent and is giving invaluable assistance in helping to place the shipyard employes in homes, rooms and apartments. The demand for immediate action became so apparent, when the situation was thoroughly investigated, that the Shipping Board decided to start construction at once at the most critical points."

The Shipping Board is building up its own housing organization in conjunction with the Committee on Housing and, in order to lose no time, has provided offices and salaries in the hope that Congress will realize the necessity for these expenditures and provide the necessary appropriations. It is a little shocking, perhaps, to hear further of "standard town plans" as well as standard houses

which are being prepared to advance matters as far as possible with a view to the appointment of an independent housing commission by Congress which later on will take over the necessary housing for all branches of the government. A bill embodying that recommendation is being prepared by the Housing Committee of the Council of National Defense.

"Housing facilities," says Mr. Hurley, "must be obtained for the large army of labor that must like where the government's operations are being conducted on such an enormous scale, and should be coordinated and standardized in one commission for all branches of the government."

#### BETTER THINGS AT CAMP BOWIE

THE following extract from a letter written on December 27 by the Texas State Board of Health shows that the "acceleration" of sanitary measures hoped for in last week's SURVEY [page

371] has begun:

"As to the excessive morbidity rate at some of the cantonments in this state, particularly the one at Fort Worth. Camp Bowie, I am convinced that the trouble cannot be attributed to the type of men or the climate, and I am in full accord with the surgeon-general, Dr. Gorgas, and our state health officer, Dr. Collins, in attributing it to inadequate hygienic and sanitary provisions. For instance, until just recently, I understand, there was no arrangement for hot water at the hospitals of this camp, and I do know from personal observation that there was no severage.

"The toilet facilities consisted of several ordinary pit type of privies, lecated from two to three hundred yards from the hospital building, and to these the sick men had to go, regardless of the weather conditions. Of course, for those too weak to leave their room, the bed-pan was used. I mention this in detail because it was the most glaring of all the sanitary defects. The others were the lack of overcoats, woolen underwear and too many men to each tent.

"I understand now, as a result of the visit of General Gorgas to this camp, that these conditions have been remedied, and I do know that there is now a considerable decrease in their sick rate. I do not mention this in any spirit of criticism in our administraton, for 1 think that their accomplishment for preparing our country for the great struggle is really marvelous when you consider what has been done during such a brief period. I think these defects are due to a lack of appreciation of sanitary measures among the general line officers. As you will recall, they, and not the medical branch of the service, are re-

sponsible for construction of the camps."

The Official Bulletin of December 20

## Social Work Series

Edited by MARY E. RICHMOND

MR. DEACON'S book on Disasters is the initial issue of a new series, of which successive volumes will be published by the Russell Sage Foundation at frequent intervals. This first one illustrates the plan of the others. It is brief and readable, it is written from the original documents and from first-hand experience, it gives something more than theoretical guidance in a practical task.

The ambition of the Social Work Series is to embody, in the field of social service, the message of a representative group of practical social work ers, each of whom will discuss specific facts and explain their meaning lucidly in brief compass.

Write for announcements to be forwarded as these books are issued. JUST PUBLISHED

## DISASTERS

And the American Red Cross in Disaster Relief By J. BYRON DEACON

TELLS the story of what to do before disaster comes—it comes at least six times a year in this country, and overwhelms any stricken community which is wholly unprepared. Tells also what to do at the time and what to do later.

Indispensable for the city official, the Red Cross worker, and for the American interested in relief of refugees and reconstruction work in France and Belgium. A good introduction to the principles of relief as taught in training courses for social workers.

Cloth, 230 pages; price 75 cents net. Address

Publication Department, Russell Sage Foundation, 130 E. 22nd St., New York City

gives statistics from the surgeon-general's office as to Camp Bowie, which shows that the sick-rate was very nearly cut in half—four thousand and more cases of sickness for the week ending December 7, 2407 December 14. Instead of 225 cases of pneumonis, there were on December 14 but 114 and 36 cases of measles instead of 844.

### A MOVING SCHOOL OF FOOD CONSERVATION

\*HE cover of this issue shows one of many ingenious devices brought before the people of Pennsylvania by the Food Supply Committee of that state's Committee of Public Safety to present in a striking and attractive form the principal needs and methods of food conservation. Borrowing from the experience of agricultural colleges and state departments of agriculture, Howard Heinz, chairman of the committee named, secured the cooperation of the Pennsylvania Railroad Company in putting on wheels an exhibit carefully got up for the United States Food Administration by E. G. Routzahn and Marv Swain Routzahn of the Department of Surveys and Exhibits of the Russell Sage Foundation.

The food train was scheduled to reach more particularly the smaller towns and cities; and its arrival was prepared for by an advance agent who obtained the cooperation of the local council of defense. Some fifty thousand people in all saw the exhibit in three months, and these, for the most part, were a selected audience, so that the message indirectly reached a much greater number.

One special advantage of the train exhibit is that every visitor passes along it in a given direction; this makes possible a logical sequence of exhibit and demonstration and a concentration of attention often lost in larger expositions. The counters, along one side of the cars only, were raised thirty-six inches from the floor, and the demonstrators stood a foot higher than the people facing them.

The chief object of the demonstration train was to bring home the contribution to the national task of food conservation which an individual household can make and the importance of this individual contribution. Thus it was shown that if everyone in Pennsylvania saved one ounce of sugar, one ounce of meat, two ounces of wheat flour and one-third ounce of fat daily, then in one week enough food would be saved to supply the draft army of the state (60,859 men) with sugar for seven months, meat for two months and flour for five months, and a large quantity of ammunition containing glycerine manu-factured from the fat. This story was depicted with miniature warehouse. army supply-wagon and an encampment

representing the war home of the Pennsylvania draft quota.

The car first entered was devoted to canning and drying. One whole car was devoted to instruction in the use of swed fats and vegetable fats in place of butter and lard. In all the demonstrations it was assumed that the visitors had a general knowledge of breadmaking, cooking, canning and other processes of food preparation, and that they required visual instruction in the details of recipes and methods new to them rather than elementary teaching.

#### DISCIPLINE AND PROBATION IN THE NAVY

OES war produce more punishable offenses than peace by men enlisted in the service of their country? That it does not, at least with respect to the navy, is the evidence supplied by the judge advocate general in his annual report to the secretary of the navy.

Officers in the navy and marine corps six months after war was declared numbered 13,500; ealisted men, 237,000. On March 1 these figures were only 4,625 and 72,000, respectively. Taking the fiscal year as a whole, the average number in service throughout the year was 95,548. In 1916 this was 62,539, The increase, therefore, was 52.8 per.

cent; for the average of the three years preceding 1917 it was 59 per cent.

The increase in general courts-martial for the year was much less than this, being only 21.2 per cent over 1916. Summary courts-martial increased only 1.5 per cent over 1916 and 3.1 per cent over the average of the three preceding years. The number of deck courts held was actually reduced.

The policy of rehabilitating naval offenders by probation has only recently been introduced. In the preceding annual report it was stated that 65 per cent of those placed on probation had successfully completed an average probationary period of six months and that it was expected that 35 per cent would completely rehabilitate themselves and be discharged in honorable status at the end of their enlistments. The present report shows, however, that only 36 per cent of the 616 placed on probation in 1916 completed the full year of their probation, and the estimate of those who will ultimately be honorably discharged is reduced to 25 per cent. Probation proved unsuccessful in the cases of 390, successful in 226.

The detention system on board the U. S. S. Southery at Portsmouth, N. H., was abandoned during the year. "No sufficient reason," says the report, "was apparent why the class of younger men previously placed in detention should have special opportunities for rehabilitation which were denied to regular naval prisoners. . The conditions at naval prisoners. . The conditions at naval prisoners by no means too severe for any young man of age and physique enabline him to enlist in the naval service."

It was on the Southery that Thomas Mott Osborne spent a week in voluntary incarceration preliminary to beginning a study of naval prison methods for Secretary Daniels. Mr. Osborne is at present engaged in working out recommendations for improvement in these methods.

#### COUNTRY MOVIES PAID FOR BY THE STATE

THE motion picture has been largely a town and city entertainment. North Carolina has decided to make it a rural one as well. She believes that the fun and experience of the world ought to be brought as close to country folk and those who live in tiny hamlets as to their more gregarious brethren in cities.

The state has appropriated \$25,000 to assist rural communities in arranging for motion picture entertainments. A third of the cost is borne in this way, two-thirds by the local communities. The legislature directed the state super-intendent of public instruction to provide entertainments wherever the people wanted them. A unit consisting of one picture outfly complete, photoplays, an

## HAMMACHER, SCHLEMMER & CO.

4th Avenue and 13th Street

New York since 1848

operator and everything necessary for one year's service has been found to cost about \$3,000. The county therefore pays \$2,000, the state \$1,000.

The first circuit has been worked out in Sampson county. Ten communities asked for the service for one year beginning November 20. Each of these communities guaranteed a sum not to exceed \$225 and was allowed to choose its own way of raising the money. Every one decided to charge ten cents admission. At some of the entertainments three times as much as the cost of the service has been taken in.

The program running in Sampson county the first part of December consisted of two reels presenting a Boy Scout story, said to be "full of patriotism and German spies"; two reels of a Max Linder comedy, and two health reels on tuberculosis furnished by the State Board of Health. The county health officer made the rounds with the operator, talking a few minutes at each meeting on the subject of tuberculosis and Red Cross seals.

It is a part of the state's plan that the pictures shall take about an hour and a half, and that a half hour shall then be given to holding a community meeting and discussing community problems. The type of man chosen for operator is one who can organize community leagues in the different counties. It is too early to predict the full success of this venture in state aid, but the possibilities are apparent.

The difficulty of obtaining suitable films, the cost of equipment and of exhibiting the films, and the legal requirements regarding fire-proof booths and licensed operators have heretofore made it almost impossible to maintain regular motion picture entertainments in country neighborhoods. North Carolina seems to have met many of these objections. The circuit is covered by means of an automobile which carries the motion picture machine and an electric light plant. Insurance regulations are met through the use of an incandescent lamp. This lamp also solves the problem of licensed operators. So far the average cost of a single performance has been about \$12.

#### BOARDING AND SALE HOMES FOR BABIES

THAT babies whose parents did not want them were bought and sold in a regular commercialized traffic, bringing from \$15 to \$100 each; that these and other children were being placed by the hundreds in filthy, unsupervised homes, where the foster mothers neglected them and some died of sheer starvation; that the women who conducted these homes were ignorant and utterly unfit to be entrusted with the care of children; that some of them were prostitutes and that others drank and

## January **Opportunities** at McCutcheon's

F OR January we shall offer as comprehensive a stock of Household Linens as has ever been shown at "The Linen Store." There is practically nothing wanting in this collection, and this is the more remarkable in view of the general shortage of Linens and the difficulties of transportation.

Within the next six months the prices of Linens will unquestionably be much higher than today; besides, it will not be possible to secure certain lines of goods at any price.

The scarcity of Linen goods is due to the shortage of raw material and the fact that a large portion of the available supply is commandeered for military purposes.

We shall, however, at the same time that we offer special prices on a wide assortment of goods, maintain during January throughout our entire stock, the same prices which have prevailed during the past season. No increase will be made until after January.

Many of these goods cannot be replaced to be sold except at 25 to 331/3 per cent. advance on our present prices.

We have no hesitation therefore in urging upon our patrons the advisability of supplying their present and future Linen wants now.

Send for new booklet, just issued, "January Opportunities at 'The Linen Store'."

## A NEW BASIS FOR SOCIAL PROGRESS

By William C. White and Louis Jay Heath

THIS notable study deals with the subject of dividing cities into homogeneous population units as a basis for educational and social administration. It shows how the plan has brought about great improvement in health conditions, and how the same plan can be used for the handling of educational and social problems.

The authors have been engaged in making the University of Pittsburgh survey. \$1.25 net.

Houghton Mifflin Company

4 Park Street

Boston

were wretched abodes. Inquiry of every social service agency in the city elicited the names of 137 such homes, all told. Note that the names of 137 such homes, all told. Note that the names of 137 such homes, all told. Sight unlicensed child-placing agencies, thirreen could not be located, thirty-seven had no children at the time of the investigation, and seventy-two were boarding from one to wenty children each—337 children altogether. Each one of these seventy-two unsupervised baby farms was investigated by the association.

A city ordinance required that homes where more than three children under three years of age were boarded apart from their parents, for a period longer than twenty-four hours, should be licensed by the Health Department. This was the only law affecting baby farms. A home where three children under three years of age or any number over three were boarded was not required to have a license and received no supervision. The only way to remedy conditions in such homes at that time was to file petitions in the Juvenile Court and have the children removed as dependents; and there was nothing to prevent a woman operating a home closed in such a manner from immediately taking other children to board.

The homes were located in every section of the city, in the fairly prosperous neighborhoods, in the best residential districts, a few in basements and shacks in the poorer quarters. The investigation showed that the women operating the homes usually had families of their own to care for, in addition to their foster charges. Twenty-eight had from one to six children of their own, while fifty-seven had either children or adult boarders or roomers. A woman on the South Side had six small children, two adult boarders, an elderly father and crippled husband to care for; yet she was boarding seven small children besides. Five of these were sick at the time of the investigation. No one outside the family assisted this woman with her work. Indeed, outside assistance was practically unknown in all these baby farms.

#### THE FOSTER MOTHERS UN-

THE foster mothers were ignorant and knew nothing of child care. A few had assisted at births, and thought that this qualified them for what they were doing. A number had immoral records; three used intoxicating liquors. In general they were dirty and unitdy. Thirty-two, says the report, were "positivels fifthy." Sleeping accommodations were a menace to health in thirty-three of the homes; in only five was a bod provided for each child. In two homes a child suffering from a veneral disease and a child suffering from rickets were discovered occupying the same bed. In another

a woman who had earned her living as an attendant in a house of prostitution was found occupying the same bed with three little girls. In still another, where sixteen children lived, the water had been turned off for ten days; during that time none of the children had been washed and the stench from the toilet was intolerable.

The children suffered from innumerable diseases. Thirty-three were diagnosed as extremely undernourished. twenty as having rickets, eighteen as venereally infected. Others were paralyzed, crippled, tubercular or so ill that they required hospital treatment. None of the homes had any medical examination of the children on entrance and only one made a pretense of medical inspection while the children lived in them. One eight-months' old baby had been suffering from a fractured arm for more than a week without medical attention. Though the investigators had no way of diagnosing mental defectiveness other than by observation, fourteen children were so feebleminded that their condition was obvious to a layman.

#### POVERTY, A MINOR CAUSE OF THE SEPARATIONS

ARIOUS causes had led to the placing of these children in such homes. Abnormal family conditions were, at bottom, responsible. Nearly a third of the children were illegitimate. Of these, ninety-three were boarded out because their unmarried mothers wished to hide their existence. Fifty-nine were boarded out because one or both parents were dead. Six were placed by persons who gave fictitious addresses and were never heard from again. The parents of four, although married and living together, frankly said, "We don't want the chil-dren around." In only fifteen of the cases was poverty assigned as a reason. The actual placing in most instances had been done by a parent or relatives. Sixteen children were placed by social workers who, says the report, "were apparently not aware of the dangers of boarding children in unsupervised homes.'

Names and addresses of the parents, in most of the homes, were kept on scraps of paper in every conceivable place. Many of the caretakers did not even know where the parents lived. In such cases, if the child became ill the caretaker did not know how to reach the parents. Several children died before their parents even knew they were

Board, paid usually by the father or the mother, amounted to from one dollar to eight dollars a week. The usual rate was from two dollars and a half to four dollars. The children lived in the homes varying lengths of time, over a third having been in their present abodes longer than a year, over a half longer than six months. The homes themselves

#### "Home Service Workers Wanted"

There is an increasing demand for well-trained executive secretaries of Home Service sections of the American Red Cross. Qualified social workers, who desire employment in Home Service sections, or information regarding any phase of this work and possible openings, should address the one of the Division Directors of Civilian Relief who is nearest to his or her place of residence.

Mrs. W. H. Lethrop, Division Director of Civilian Relief, New England Division, A. R. C., 755 Boylston Street, Back Bay Station, Boston, Mass.

Reduce Your Cost of Living!

THE increasingly high cost of living can be reduced at once only by the application of the food bill, how to lessen the food bill, how to are time and labor, how to keep the family in health, how to makings all the details of houselengin in the bast and easiest way. Demostic Science makes the work of the houselenger as interesting profession intered of deadening

details of housekeeping in the best and easiest way. Donnestic Science makes the work of the housekeeper an interesting profession instead of deudening modern control of the control of the control of School of Home Economics were prepared by leading machers, specially for home study. They have been tested and presed by over 25,000 housekeepers, teachers, inspiration managers, etc.

The attractive illustrated 100-page handbook of the school, "The Profession of Home-Making," will be sent on request. Address a postcard or note--A. S. H. E., 519 West "Ma. Street, Chicago, Ill.

## Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new. They protect your Mattress

from all impurities and lengthen its life. A single trial will convince.

were established institutions, all but thirteen of the women investigated having been in the business more than three vears.

The sale of babies was a part of this commercialized placing. Many maternity hospitals were found to make regular charges of fifteen dollars and upwards for disposing of unwelcome children; doctors and others did the same thing. One of the association's officers visited several of the homes with a pregnant woman for whom she pretended that she wanted to find a place. Some of the people in charge of the homes offered to dispose of the child for from fifteen dollars to sixty-five dollars, and said that no questions would be asked and that they did not wish to know the mother's name. It was found that if these people secured an unusually attractive baby, they would sell it for sums ranging from fifteen dollars to one hundred dollars. One woman sold a baby for the latter amount while the investigation was under way, charging twenty-five dollars down and the remainder on the instalment plan. Her trade slogan was: "It's cheaper and easier to buy a baby for one hundred dollars than to have one of your own.

This traffic in babies recalls a similar traffic discovered in Baltimore two years ago by the Baltimore Vice Commission. There clergymen, physicians and nurses were found willing to aid in the transaction [see Just Flickerings of Life in the SURVEY, May 6, 1916].

#### LEGISLATION TO BE SOUGHT BY THE STATE

HE Chicago investigation ended August 1, 1917. In the course of it the association had one hundred and seventysix children removed from their foster homes: seven died from neglect before their removal could be brought about. As a result of publicity given to the conditions found, a city ordinance was passed requiring a license for all homes where more than two children are boarded apart from their parents. The licensing and supervising of these homes, under the ordinance, is done by the city Department of Health. An infant welfare nurse has been assigned by the commissioner of health to assist in the supervision of homes and later, when licenses are issued, the visits of this nurse will be supplemented by regular inspections of a physician.

The association that made this inquiry is one of the most favorably known social service agencies in the country. Mrs. Joseph T. Bowen is president; Judge Julian W. Mack second vice-president; Mrs. Robert Berry Ennis, secretary; and Sophonisba P. Breckenridge a member of the executive committee.

The report of the investigation says that the ordinance above described is Donahey in Cleveland Plain Dealer

RED TAPE AND A WHITE WINTER-WILL THE GOVERNMENT RAILWAYS GET THE COAL INTO THE GRATE?

only a step in the right direction. It declares that every child should be considered a dependent child, and therefore entitled to state support one month after its parents or guardians have ceased to provide for it; that every child should have a guardian who can be held legally responsible for its care. It urges the passage of laws requiring the stricter supervision or licensing of homes where children are boarded apart from their parents, and says that this matter should be put under the State Department of Public Welfare. It would make it unlawful, says the report, for the mother of vidual to place more than one child during one year in the permanent care of another without first obtaining a license from that department, and it would require the registration with the same department of all children placed for board with persons not related to them by blood or marriage.

Finally, the state should make it unlawful, says the report, for the mother or any other person to give away the permanent custody of her child, or otherwise dispose of her legal responsibility for its care, without first obtaining the consent of the Juvenile Court. The exclusive power to issue a decree for adoption should be vested in the Juvenile Court; the court should require a thorough investigation of the adopting family, and the adoption should not become permanent until a satisfactory six months' probationary period had elapsed. Laws giving effect to these recommendations, says the report, should be enacted by the next state legislature.

#### THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

#### SURVEY

#### KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corresponding officer, etc. [They are ar-ranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject clas-sifications, as "HEALTH," printed in capitals.]

capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose possage for reply) and pamphlets supplied free or at nominal hearges. Membership is not required of those seeking information, but offers an opportunity for you to share spliritedly and seriously in your common the seeking information and the seriously in your common the seriously in your consistence which is reasonable to the seriously in your country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall en-deavor to get your inquiry into the right hands.

#### WARTIME SERVICE

"How the Survey can serve" was the subject of an informal conference held early in April, in our library, to which we asked the executives of perhaps twenty national social service organizations. The conference was a unit in feeling that as a link between organized efforts, as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the Survey was at the threshold of an opportunity for service such as has seldom come to an educational enter-tries.

prise.

The development of this directory is one of several steps in carrying out this commission. The executives of these organizations will answer questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demand. mands.

Listings \$3 a month for card of five lines (in-cluding one listing in SUBJECT INDEX by full name and three by initials), fifty cents a mouth for each additional line. No contracts for less than three months. Additional charge of \$1 for each change of copy during three-month period.

CHARLES PRANCIS PRESS, NEW YORK

NATIONAL FEDERATION OF SETTLEMENTS
—Robert A. Woods, sec'y, 20 Union Park, Boston. Develops broad forms of comparative
study and concerted section in city, state, and nation, for meeting the fundamental problems disclosed by settlement work; seeks the higher and
more democratic organisation of neighborhood life.

MATIONAL LEAGUE OF WOMEN WORKERS-Jean Hamilton, org. sec'y; 35 E. 30 St., New York. Evening clubs for girls; recreation and instruction in self-governing and supporting groups for girls of working age.

NATIONAL LIBERAL IMMIORATION LEAGUE
—Sun Bidg., N. Y. Advocates selection, distribution and Americanization and opposes indiscriminate restriction. Catalog of publications on request, Membership (31 pp) includes all available

NATIONAL ORGANIZATION FOR FUBLIO HEALTH NURSING — Ella Phillips Craodali, R. N., exc. sec'y; 600 Lexington Avc., New York. Object: To stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Bulletins sent to members.

MATIONAL SOCIAL WORKERS' EXCHANGE
—Mrs. Edith Shatto King, mgr., 130 E. 22 St.,
New York. A cooperative registry managed by
social workers. Social organizations supplied with
trained workers. Membership composed of experienced social workers.

MATIONAL SOCIETY FOR THE PROMOTION OF INDUSTRIAL EDUCATION—May Allisson, ant. see'y: 140 W. 42 St. New York. Promotion of legislation for federal and state-sided vocational education; organization of industrial schools and classes; surveys, publications, conferences.

NATIONAL TRAVELERS AID SOCIETY—Gibert Colgate, pres; Rush Taggart, treas; Orin C. Baker, accy; rooms 20:21 465 Lexington Ave., New York. Composed of non-commercial agencies interrested in the guidance and protection of travelers, especially women and girls. Non-sec-

MATIONAL WOMAN'S PEACE FARTY. Section for the United States of the International Committee of Woman for Fernanent Fesse-Mrs. ch'n; 116 S. Michigan Ave., Chicago. The purpose of this organization is tendinal all American women is arousing the nations to respect the sacredness of buman life and to abolish war.

MATIONAL WOMEN'S TRADE UNION LEAOUE-Mrs. Raymond Robins, pres.; 139 N. Clark St. (room 703). Chicago. Stands for self-government in the work shop through organization and also for the enactment of protective legislation. Information given. Official organ, Life and Labor.

PLATOROUND AND RECREATION ASS'N OF AMERICA—H. S. Braucher, see'y: 1 Madison Av., N. Y. C. Playground and community center ac-tivities and administration; cooperating with War Dept. Commission on Training Camp Activities.

RUSSELL SAGE FOUNDATION—For the Improvement of Living Conditions—John M. Glenn, dir, 130 E 22 St., New York, Departments: Charity Organization, Child-Helping, Education, Statestice, Recrestion, Remedial Loans, Surveys and Exhibits, Industrial Studies, Library, Southern Highland Division.

SHORT BALLOT ORGANIZATION—Woodrow Wilson, pres.: Richard S. Childs, see'y; 383 Fourth Ave. New York. Clearing house for information on abort ballot, commission gov't, city manager plan, county gov't. Pamphiets free.

SURVEY ASSOCIATES, INC.—Robert W. de Forest, pres.; Arthur P. Kellogs, esc'y; publishers of the Sourer, Paul U. Kellogs, estion; Edward of the Sourer, Paul U. Kellogs, colting: Edward editors; departments; Clivics, Graham R. Taylor; Industry, John A. Fitch; Health, Alice Hamilton, M.D., Gertrude Seymour; Education, Crime, Wiln-throp D. Lane; Foreign Service, Bruno Lasker.

TUSKEOEE INSTITUTE—An institution for the training of Negro youth; an experiment in race adjustment in the Black Belt of the South; turnishes information on all phases of the race problem and on the Tuskegee Idea and methoda. Robert R. Morton, prin.; Warren Logan, treas.; Emmett J. Sout, ace'y; Tuskegee, Ale.

WOMEN'S EDUCATIONAL AND INDUSTRIAL UNION-Miss Ilelen N. Henry, exec. sec'y, 264 Beylston S.k. Boston. Information regarding women's work, vocational opportunities, social weifare legislation Mass.; practical training in institutional management through industrial departments. Reading lists on women's vocations.

## ANNOUNCEMENT

to

## Physicians, Public Health and Social Workers

of the

## United States and Canada

THE METROPOLITAN LIFE INSURANCE COMPANY invites physicians, public health and social workers to make use of its valuable collection of mortality statistics.

These statistics relate to the principal causes of death among white and colored wage earners in the United States and Canada. The material covers over ten million individuals for each of the six years, 1911 to 1916. Death rates are available for each race, sex, and by age period.

The Company hopes in this way to aid in the study of disease and disability among wage earners. It desires to stimulate medical investigation and research. By offering these statistics to the medical profession and to public health and social workers, the Company expresses also its appreciation of the co-operation which it has received from physicians and others who have replied to inquiries and have given detailed information in thousands of cases. This assistance has helped to make the statistics more accurate and valuable.

All inquiries should be addressed to

# SURVEY

THE WHITE HOUSE

20 December, 1915

My dear Doctor McKelway:

As the labor situation created by
the war develops, I am more interested than
ever, if that were possible, in throwing all
the sateguards possible around the labor of
women and children in order that no intolerable
or injurious burden may be placed upon them.
I am, therefore, very gled indeed that the
National Child Labor Committee is diligently
continuing its labore and extendings its vigilance
in this important matter. By doing so it is contributing to efficiency and economy of production,
as well as to the preservation of life and health.

Dr. A. J. Holleway, Hational Child Labor Committee, Washington, D. C.

## Stretching the Pay Envelope

Some New Methods of Fixing Wages

By John A. Fitch

OF THE SURVEY STAFF

NE of the paradoxes of the war is the stimulus it is giving to human conservation. Witness the awakening in Great Britain to the inefficiency of overwork as proven by the reports of the Committee on the Health of Munition Workers, and as indicated by Lord Leverhulme's advocacy of a six-hour day. The United States has been at war nine months as against England's three and one-half years, but the same motives that created a new attitude there toward the well-being of the workers have been active here since the struggle in Europe began.

Two employment managers for large corporations stated the case for me not long ago. One of them was in a state of nerves when I called on him. He snorted at my questions. There was nothing to tell me. Anybody ought to know what the job of an employment office is. They were doing the only thing anybody did—"hustling for men." And he turned his back on me. The other man was more of a philosopher. "The function of an employment department," he told me. "is to keen men from quitting."

Both men really told the same story. Men are not so easy to get as in the days before the war, when immigrants were entering our doors at the rate of a million a year. At the same time our industries are expanding and the demand for men is increasing. It is a time when employment managers are hustling for men and, after they get them, praying that they won't quit. The situation was admirably summed up at the Safety Congress last fall, when a representative of one of the railroads expressed amazement at the idea of discharging men who disobeyed safety rules. "Any safety man on our railroad," he declared, "who recommended firing a man would get fired himself."

The situation before the employers of the country is not a new one. They have had trouble before in getting men, and there is always trouble about keeping them. But the old situation has been greatly intensified in many industries by the war. It is a commonplace among employers that when labor is scarce and wages are high the tendency of workingmen to drift about is greatly increased. It is also a well-known fact

that under such conditions men are not regular in their attendance at work. They take a day off when they feel like it, secure in the moral certainty that their jobs will be waiting for them when they go back.

Old though the difficulty is, good, hard, constructive thinking about it is comparatively new. But now some of the keenest minds in the industrial world are at work on the task. Under the pressure of industrial necessity in war time more thought is being given to the welfare of wage-earners than in any previous time in the nation's history. The question is low to get and keep men, and the answer so obviously lies in the degree to which men are satisfied with the conditions of their work that it is a wonder no one has thought of it before. If the wage-earner is to be kept on the job, means must be taken to make the job worth while.

The most obvious need of the wage-earner is an adequate wage. The first question of an applicant for work is what will the job pay. More unrest is provoked and more strikes occur over the wage question than over any other one thing. In attempting to attract labor and create satisfaction at a time when prices of necessities are mounting to unheard of levels, it is clear that attention must be directed first toward the adequacy of the wage scale.

Since the beginning of the war various methods of wage adjustment have been put to the test. Many corporations adopted the war bonus idea. They took the view that the outlook was too innertain to justify a permanent advanceif affairs took a bad turn it would be much easier to discontinue the bonus than to reduce wages. In order to emphasize the difference between the regular wages and the bonus, the latter is paid at more infrequent intervals, in some casemonthly, in others quarterly, sometimes in a lump at the end of the year.

The bonus plan as a method of relieving the pressure of the high cost of living is, of course, subject to the same difficulty that affects any other method—if it is not accurately based on the actual increase in costs, it will not allay unrest. There is a special objection, also, due to the traditional opposition of oreanized labor to bonus schemes of all sorts. They object to a war bonus for precisely the reason that leads employers to favor it—the ease with which wages can be reduced when a slump comes. The United Mine Workers succeeded in practically eliminating war bonuses from coal mining.

There have been impressive increases in money wages in all industries. Many corporations have diargarded the danger involved and have raised the scale of payments as if present conditions were to be permanent. At periodic intervals one reads of another advance and yet another and then another on top of that, until the impression gets abroad that the working people of the country are rolling in wealth.

To judge of the meaning of such advances one needs to check them up against the increase in the cost of living. Perlaps the most illuminating example is the United States Steel Corporation. Repeatedly during the last two years the corporation has increased the wages of its employes, each time by 10 per cent. Three times in 1916 such increases were announced, taking effect on February 1, May 1 and December 15; and twice in 1917, on May 1 and October 1. This makes an increase of over 60 per cent in a period of twenty-one months, a rate of advance almost without precedent.

#### Wages Lagging Behind Food

THE significance of this action can be gauged only by placing alongside of it the figures of advanced living costs. The Annalist publishes every week a chart on which is plotted the curve of the wholesale price of twenty-five principal food products. The index number given on this chart for February 1, 1916, was 157. For October 1, 1917, it was 280.

The fact that in the same period of time wholesale prices of food advanced 123 per cent while wages rose only 60 per cent does not indicate that the rise in the cost of living has been twice as rapid as the increase in the wages of steel workers. Rent is one of the most important of factors entering into living costs and, in general, rents have not gone up as rapidly nor proportionately as high as food prices. Other factors entering in do not show so rapid an advance. Nevertheless, when wholesale prices of food go up twice as fast as wages, it is safe to assume that the wage-earner's income has lagged behind in the race with his necessities. It is clear, therefore, that wage increases in themselves are not sufficient to maintain the worker in statu quo. They must advance pari passu with the movement in the cost of living if he is not to be worse off than before.

Since the war began, there has arisen a new method in wage payments. The plan is to establish a wage system that will irse automatically with the cost of living. The Oneida Community, Ltd., adopted a bonus plan two years ago, basing the extra payment on Bradstreet's index figures. Each moth every employe rated at \$2,000 or less receives in addition to his regular pay, a "High Cost of Living Envelope." Its contents, based on Bradstreet's figures, fluctuate with the changes in prices. Thus, in January, 1917, the envelope contained an additional 16 per cent based on the regular wages and in December, 1917, the bonus was 32.75 per cent.

A similar method is used by the Kelley-How-Thomson Company of Duluth, and by the George Worthington Company of Cleveland, both in the wholesale hardware business.

To the trade unionist these plans, since they are pure bonus schemes, would doubtless be objectionable. It must be recognized, though, that these plans are quite different from the ordinary bonus idea. They represent a distinct effort to make the wage scale expand in direct proportion to the changes in the cost of living. But like the other bonus plans, the arrangement can be revoked, without any actual cut in wages appearing to take place.

More interesting, therefore, are the plans that have been adopted within the last year and a half by two large employing companies, one in Detroit and the other in Syracuse, N. Y.

In 1916 the Solvay Process Company in Detroit was having difficulty in keeping men. After some investigation, it was decided that the chief difficulty was with the wages. Consequently, after conducting a study of the cost of living, the company made an estimate of the minimum cost of living for a family of standard size and then raised wages to that point. Immediately the groceries and other stores in the vicinity of the plant put up their prices so as to absorb all of the increased wages. The company then started a grocery store of its own and sold to its employes at cost. With this beginning a continuous check is now being made on changes in the cost of living. Two men on the staff of the employment manager devote themselves exclusively to this task. They have about one hundred families who are keeping careful accounts of their expenditures on forms provided by the company. Checked against these figures is an estimate made by a local hospital of the cost of necessary rations on a scientific basis. Government figures are also used. With these as a basis, it was decided last summer that a minimum living wage should yield \$1,200 a year. Accordingly the wage rate was so adjusted as to provide, with overtime and bonus, a minimum income of \$100 a month.

With a similar desire to establish a wage rate that would have some relation to the cost of living, the Franklin Automobile Company made a study early in 1916 of the cost of living in the neighborhood of its plant in Syracuse, N. Y. The year 1905 was taken as a base for determining what an adequate wage should be in 1916, because the records showed that they had an unusually low labor turnover that year, indicating that the workers were satisfied with the conditions then prevailing. A study was made to discover the extent to which the cost of necessities has risen since 1905, and this was checked against the actual expenditures in 1916 of a large number of families in which the wage-earner was a Franklin employe. As a result of this investigation a very elaborate formula was worked out for determining the wages that should be paid. Provision was made for a continuous study of the cost of living, and the plan calls for a revision of wages every three months in order to maintain the proper relation to the movement of costs.

One of the items that went into the formula at the Franklin plant was a figure representing the length of service. For each year of service, 2½ per cent of the base rate is added to the wage. This, according to George D. Babcock of the Franklin Company, who wrote of it in Industrial Management, was to pay "for the loyalty which develops in employes who have been long in service, for the historical knowledge which they have, for the espeit de corps which comes through long periods of association with men, as well as for a reduction in the frequency of labor turnover."

#### Making Money Worth More

EMPLOYING corporations are beginning to realize that continuous service is worth paying for. Sears, Roebuck & Co. in Chicago add 2 per cent to a man's wages after he has been in their employ two years, and after that 1 per cent is added each year up to ten years of service. This plan is being adopted widely, and since it is in addition to any other increase in wages that there may be, it provides a real incentive to remain in the employ of the company.

Another method having in view the stretching of the pay envelope to cover the cost of living, which has the added advantage of costing the employer less than an increase in wages, involves various attempts to increase the purchasing power of the wage-earner's money. Throughout the Middle West the establishment of grocery stores in a space provided by the plant, and in which the employes can purchase goods at cost, is becoming quite general. Employers recognize that the establishment of lunch-rooms where food is furnished at cost, or close to cost, has the same advantage and, of course, in addition to that it has the advantage of providing a sanitary dining room and good hot food, the effect of which is marked on the wage-earner's health and consequently on his efficiency.

The effect of the war on wages can hardly be considered an evidence of increased recognition either of the rights or the needs of labor, because in general, however great the increase in money, real wages have probably declined. It is an encouraging sign, however, when two large employing corporations like the Franklin Company and the Solvay-Process recognize so clearly their obligation to pay a living wage that they are unwilling any longer to leave the determination of the amount to the blind law of supply and demand. And the effect of the movement thus begun will outlive the war.

## Food in Families of Limited Means

#### A Study of Home Facts in Two Hundred Boston Families

By Michael M. Davis, Jr. DIRECTOR OF THE BOSTON DISPENSARY

◀ HAT high prices of food pinch many families severely is common knowledge, but just where, how, and how much do families of limited means feel the pressure? What are they doing about it, and what should others do to help them? These questions require facts for answer, social as well as dietetic facts. In order that local and concrete facts might be available, six welfare agencies of Boston, members of the League for Preventive Work, undertook a cooperative study of the actual food supply in families known to them. The six organizations were the Associated Charities, the Boston Children's Aid Society, the Boston Dispensary, the Boston Provident Association, the Federated Jewish Charities and the Instructive District Nursing Association. The author of this article served as chairman of the committee.

The agencies were asked to select families in which there were children, and in which some one of the regular staff of the agency had personal contact with the mother of the family, so as to render approach easier and to facilitate the collection of accurate information. They were asked not to select families with reference to any particular standard of intelligence or income, but to pick the desired number practically at random from their current cases, with the two points above mentioned in mind.

Two hundred and forty-three schedules were turned in, of which somewhat over two hundred were filled out with sufficient care to make it possible to tabulate them. It was finally decided to tabulate the first two hundred of these, in order to save time and to have a convenient number for computation.

The schedule recorded all food purchased by the family during a week (that of July 8, 1917) also data as to size, income, etc., of the family. From the nature of the schedule, the amount of food actually used by a family during the week of July 8, 1917, was not ascertained. The amount purchased was recorded. Three-quarters of the 200 families were of four nationalities: Irish, American, Jewish and Italian, Twelve other nationalities are included among the remaining 43. Only two families were colored. Nine-tenths and more were living within the city of Boston.

One hundred and fifty-two were so-called "typical" families, with both parents living, and 98 of these were families with only one wage-earner, the remaining 52 having a wageearner besides the father. Forty-six were families of widows, and in more than half of these at least one of the children was working. The proportion of families having lodgers or boarders was only about 18 per cent. The average size of the family was between six and seven persons, including boarders and lodgers. Fifty, or one-quarter of the 200 families, were in receipt of material aid, 150 not being aided.

The dietary analysis of the food purchases classified all the articles under sixteen headings. At first the families were separated in these classifications according to nationality, but to the surprise of the investigators the differences found to exist between the various national groups were so slight as to make this line of classification of little value. The families were then grouped with reference to income, and this relationship was found to be significant in many instances, so that thereafter it was followed throughout. Without entering into the details of the dietaries, which are given in the pamphlet containing the full report,1 it may be said that these families depend chiefly upon bread, cereals, potatoes and meat (with some fish and eggs), with a full allowance of sugar, a moderate supply of butter and other fats, and small amounts of milk, vegetables and fruit, The proportionate expenditures for the chief groups of these foods is brought out in the following table:

RELATIVE EXPENDITURES FOR VARIOUS FOOD GROUPS, CLASSIFIED BY INCOME

Family Income	Meat, fish and eggs: expenditure per week	Fruit, fresh vegetables (incl. potatoes and legumes')	Milk	Flour, macaroni cereals and breads			
\$10-\$14	2.92	1.43	1.41	2.36			
\$15-\$19	3.32	1.82	1.53	2.28			
\$20-\$24	4,12	1.94	1.45	2.52			
\$25-\$29	3.30	1.85	1.95	3.52			

The milk consumption, given in detail for 198 families, is of special significance. It appears that over 40 per cent of families purchased only a quart of milk a day or less. Only about 2,119 quairs appear to have been purchased during the week by the 200 families, or about 300 quarts per day. Since some 1,227 persons were included in this study, only about half a pint, or a glassful a day, was the average allowance of milk. There were about 500 children in these families. A moderate allowance of milk for all these families together would have been 600 quarts a day (two-thirds of a quart per day per child, and one-third quart for adults).

The facts stated show that these families are on the average spending a great deal too much for meat, the ratio of meat purchased being as a rule at least twice as high, as is recommended by dietetic authorities. Still more serious is the inadequate supply of milk, a deficiency especially unfortunate in view of the large number of young children in the families. The mineral matter in these diets is undoubtedly inadequate in many instances. This could be largely remedied in the matter of calcium salts by the purchase of more milk, but the supply of fresh vegetables and fruit is also inadequate and causes deficiency of other mineral substances.

More than half of the families were spending over 60 per cent of their weekly income for food; 75 per cent of the fauilies were spending more than 50 per cent. This is shown in the following table:

PERCENTAGES OF INCOME SPENT FOR FOOD Per cent of

income spent	Estir	nated week	dy income	of fan	ilv	Per
for food	\$10-\$14	\$15-\$19	\$20-\$24	\$25	Total	ceni
Less than 40%	1	9	5	8	23	12
40-49%	4	9	6	8	27	13
50-59%	8	19	8	1	36	18
60-69%	11	21	3	3	39	20
70-79%	34	14	8	3	39	20
80-89%	2	9		1	12	6
90-99%	6	2		1	9	5
100+	7	6	1		13	6
Totals	53	89	31	25	198	100

The table shows, as would be expected, that the lower family incomes must necessarily devote a higher proportion to the purchase of food. In practically all the families, the expenditure for rent requires between 20 and 25 per cent of the weekly income. Thus, in three-quarters of the families only 25 per cent of the income was left for clothing, fuel, light, carfares, insurance, recreation, care of health and all incidentals. Some of the very high percentages in the table are due to the purchase of food which would not have been consumed during the week (particularly flour). Some of the very low percentages are due to the reverse. The figures in this table, based upon a comparatively small number of families, and for a period of one week only, must be interpreted with caution. but there is no doubt that a majority of these families were spending, and were expecting to spend, 60 per cent at least of their weekly income for food,

A comparison of the calorie requirements of families with the calories available in the food purchased by them was made. There were taken into consideration various probable sources of error, and 10 per cent was allowed for waste of the food purchased. The conclusion was reached that of the 198 families, 100 were receiving an adequate supply of energy in the food, 35 were on the border-line, 63 were receiving inadequate nourishment, i. e., more than 10,000 calories in the week short of the required amount. An analysis of the energy supply with relation to income of family and to size of family shows that the proportion of families not receiving adequate energy supply does not depend merely on income. This is for the reason

that the size of the family must be considered, and the families of the higher incomes contain a larger proportion of families of large size. Since the bulk of the families have only one wageearner, the larger number of children means greater pressure on the food supply, a pressure which often increases more rapidly than does the income

With respect to the adequacy of the calorie supply, a further comparison may be made between the families receiving material aid, and those not receiving aid:

ADEQUACY OF ENERGY SUPPLIED IN POOD

Number of families receiving	r	milies not eceiving terial aid	re	lies who ceived rial aid	Totals			
	No.	Per cent	No.	Per cent.	No.	Per cent		
Adequate supply.	82	551/2	18	36	100	51		
On border line	24	16	11	22	35	175%		
Inadequate supply	42	281/2	21	42	63	313/2		
Total		100	50	100	198	100		

It will be seen that 42 per cent of the families receiving material aid are estimated to have received an inadequate supply of energy from their food, while among the families not receiving material aid, the proportion shrinks to 28½ per cent.

When the errors in purchasing food, with respect to comomy and nutritive value are considered, and the families receiving material aid compared with those not receiving it, no special difference is found between the two groups. Failure to secure an adequate supply of nourishment was doubtless due to two causes: lack of judgment or skill in the purchase of food; and insufficient income. The facts indicate that in a number of instances families receiving material aid from chartiable societies do not secure either sufficient income, or sufficient guidance and education in the selection of food so as to obtain the best return for the money expended.

Knowing, as we do, the expenditure for food, and having computed the total calories obtained from the food purchased, it is easy to estimate the average cost per one thousand calories as bought by these families.

Cost	in				15		(	0	18	1	F	00	r		10	00	0		C	a	ŀ	0	ri	e	3	a	s Purchased No. of Families	Per cent
6-	7.	9																									10	5
8-	9.	9	٠,															٠.						٠.			46	23
10 -	11.	9											٠.					٠.									71	351/2
12-																											47	231/2
14 +				٠,		,								. ,													26	13

200

100

It will be seen that in 72 per cent of the families, the cost of purchasing a thousand calories was over 10 cents; in 36½ per cent, it was over 12 cents. A correlation of this cost figure with the size of the families showed, as would be expected, that the larger families were able to purchase with slightly more economy. The differences between nationalities, with respect to cost of purchasing food, were comparatively insignificant.

By purchasing little except those foods which provide considerable quantities of energy, and are inexpensive (such as the breadstuffs and cereals), it would be possible for families to buy the average one thousand calories at between six and eight cents; but such a diet would be insufferably lacking in variety, and is not in fact adopted. A satisfactory diet, with adequate allowance of milk, sufficient vegetables, and fat, a little fruit, a very moderate allowance of meat or fish, and no luxuries, could not, at the prices prevailing last summer or even at less prices, be purchased by a family of average size for less than ten cents per thousand calories, and in most instances probably not for less than twelve cents. This conclusion helps us to determine how much monwould be required to feed a family of a given size during a week. A family of five would ordinarily have a calorie requirment of about 85,000 per week, and their food supply would have to cost between \$8.50 and \$10, probably nearer the latter figure. A family of six, which is somewhat below the average size of the typical family among our 200, would have a calorie requirement per week of about 100,000. This family would need to expend between \$10 and \$12 during the week for food. This is at least half, usually more than half, of the income of the family of a wage-earner.

The characteristics of family purchasing, and the inadquacies of diets found among our 200 families, may be compared with those observed by the New York Association for Improving the Condition of the Poor, and reported in their recently published study. The Adequacy and Economy of Some City Dietaries. Ninety-two families were included in this investigation. Only the food aspects, were entered into, not the incomes of the families. The conclusions are practically identical with those of the present study.

Suggestions and recommendations which appear from these facts may be put from two standpoints: that of the general public, and that of charitable agencies.

The general public needs to be much more fully awakened to the serious effect of present food prices upon the nutrition of families of small means, particularly families in which there are many young children. Too many people have had any latent anxiety fulled by the comforting words: "Wages have risen." So they have, in many occupations, though by no means in all. But except in a few especially fortunate industries, such as some of the building trades, the rise in wages has been much less than the rise in prices. On the average, federal statistics show that the increase in the cost of living has been about twice as great (in relative percentage) as the increase in wages.

If a family has to spend from a fifth to a quarter of its income for rent, and more than half of its income for food, it cannot possibly provide continuously for all other needs of its members, and either the food supply must be curtailed or the family standard of living be seriously lowered at some other point. While there happens to be no present need for clothing, for instance, the family may have enough for food. But on an income of eighteen dollars per week, the parents of three or four children in Boston will find it impossible to buy enough food, pay the rent, and lay by a weekly surplus sufficient to meet the inevitable week when shoes, a winter overcoat, coal or some necessary furniture must be bought, When, under such circumstances, extra expenses come, the result must too often be stinting of food and undernourishment which, if long continued, is certain to show its ill effects on health and working efficiency. Shall we face these results late this winter or in the spring, or can steps be taken to forestall them?

#### Better Wages Plus Education

MANY families do not possess enough income to feed themselves properly. Most families, irrespective of income, do not possess enough knowledge of food values to make the most of the money they have to spend. The efforts for remedy must, therefore, be both financial and educational. With families earning below a certain level, food instruction is futile, unless through some means income is increased. With families of average size, earning \$25 a week and over, education in wise selection of foods means better nutrition and sometimes, though not always, the expenditure of less money for food. With families earning from \$15 to \$20 weekly (the greatest number

This conclusion helps us to determine how much money of wage earners' families fall here) food instruction may make lid be required to feed a family of a given size during a just the difference between an insufficient diet and an adequate the A familie of the smooth of dietary by the applies required.

> The educational food campaign has sometimes failed of effect among families of small means because it has started from the wrong point of view. Even when, as among many families which we have studied, a sufficiently nutritious diet could have been secured for less money than was expended, the families usually feel the financial pressure so keenly, and feel that they are struggling so hard already, as best they know, that they do not meet very cordially the campaign to "economize" food. In fact, they often resent the implication that they are not already "economizing" all they can. The headline of the campaign among people of the low income groups must not be "economy," but some slogan like More Food for No More Money! It is interesting and important that we find among these 200 families errors in selecting foods which would be corrected by the same recommendations as the War demands for military reasons.

> Our study enforces most powerfully the need for increased use of milk. People must be taught the value of milk as a food, and to look upon it as a necessary food for children.

#### A Cooperative Dietetic Bureau

WHETHER we are concerned with teaching a single family to purchase food more wisely, or are pushing a general educational campaign, the problem is very much the same, and in either case it is wise to confine attention to a few points and perhaps take them one at a time. The inadequate cooking equipment possessed by many families of small means, and the high prices of fuel now prevailing, suggest that the use of cooperative kitchens may become a practical step before the present emergency is over. Many housewires in certain sections of the city mix their bread but take it to a bake-shop to be baked. The idea is perhaps capable of useful expansion.

Present food conditions obviously demand of all charitable societies which administer material relief that they revise and study carefully the money standards of income which they are providing for their families. Certainly this study indicates that there is need to do this, if under-nutrition is to be avoided, with all the ills, expense, and permanent family degradation which follow ultimately in its train. To determine upon and to maintain adequate standards of material relief requires expert advice from dietitians to the directing authorities of such charitable societies. It also demands a certain knowledge of food values and of dietetic principles among the rank and file of the social workers or nurses who go into the homes. Expert dietetic guidance is required for these workers also. It is not possible to have every social worker a trained dietitian. Nor is it feasible to have a corps of dietitians visit every home, in the trail of the social worker. The latter plan is financially out of the question, the former is educationally impracticable. The only solution of the difficulty is to see that each social worker has a general knowledge of food values; that she has periodic consultation with a trained dietitian; that the social worker is required, every so often, to report the weekly food budget and purchases of her families to her superiors and to the dietitian, so that the expert shall have the facts on which to base judgment, and thus be able to supply systematic advice and guidance to the social worker. Under these conditions a comparatively few skilled dietitians could serve a very large number of social workers and a still larger number of families.

Probably such a system would do more than any other single step to elevate standards of relief and to promote health and progress among families who receive public or private charity. There might be a gain in economy and efficiency if the staff of expert dietitians were under a central bureau rather than attached to each separate social agency; each dietitian having her special district rather than her special society. The indirect effects of such a system would by no means be confined to families receiving material aid, but would be a distinct contribution to the whole educational food campaign and to thousands

other families who are above the poverty line. The food question is in the public mind as never before, and it would be easier than it ever has been to establish and secure support for an adequate system of dietetic supervision and guidance, which would affect not only charitable societies, but many other groups in the community. Now is the golden moment for

## The Demise of a Highly Respected Doctrine

By Neva R. Deardorff

ASSISTANT DIRECTOR PHILADELPHIA BUREAU OF MUNICIPAL RESEARCH

AISSEZ-FAIRE is dead! Long live social control! Social control, not only to enable us to meet the rigorous demands of war, but also as a foundation for the peace and brotherhood that is to come. This was the theme that ran strongly through all the annual meetings of the learned societies of the social sciences1 which were held holiday week in Philadelphia. Education in idealistic concepts of service, toleration, justice, are in the future to underlie this social control and to make possible an enduring world democracy. New faith was everywhere manifest in the ability of democratic governments, and of our own in particular, to rise to occasions and handle gigantic enterprises both efficiently and with a view to benefitting society as a whole. While most of the contributions were in the nature of analyses of fundamental social forces which are now at work, suggestions, often quite specific, were not lacking as to how those forces can be directed to secure the maximum of human welfare. Everywhere there was a proud loyalty to the best that American life has produced, but nowhere the fatuous assumption that the promise of America has been achieved. Criticism was searching, frank and kindly; the spirit of genuine helpfulness abounded. Men and women, young and old, brought a fine spirit of toleration and mutual respect which stands in sharp relief against the acrimonious dissension which now characterizes so much of the discussion elsewhere of the issues which were before these meetings.

The political scientists were mainly concerned with new bases for international relations and with questions of improving the governmental machinery in nation, state, county and city. Prof. Munroe Smith of Columbia pointed to the new evidences, produced by the war, of the vitality of international law which, now in its infancy, seems to be following the same line of development that national law has pursued. The German government's disregard of international law has affronted the whole world, while the allies now represent a stupendous vigilance committee organized to punish the offender and to uphold that law. In future the fabric of international law will need to be strengthened by new provisions for arbitration, for delaying the resort to force, and for joint action, short of war, to show approval or disapproval of some nations for the action of other nations. New laws of war will be forthcoming as a result of the new conditions of air and submarine fighting; "military necessity" will need definition and some proportion established between injuries and reprisals. It is probable that eventually the nations of the world will be federated. Prof. Robert M. McElroy of Princeton, as well as several other speakers, maintained that between the constitution of the properties of the properties

As for government at home, the professors seemed very diffident about the part they have, until very recently, played in shaping its course. The older teaching of government was referred to as rapt contemplation of the theoretical structure of government with no regard for its actual workings. Prof. A. R. Hatton of Western Reserve University characterized political science to date as descriptive anatomy of political institutions and legalistic concepts. The pathology of politics, together with hygiene and prevention of political ills, are the big opportunities of political scientists today. Everywhere it came out in the discussions that civic and political education for the mass of people is the sine qua non of the kind of democracy to which the United States is now committed and that this education is to be socio-economic rather than historico-juridical. Prof. Guy S. Ford, now of the Committee on Public Information in Washington and one of many teachers who have gone into public service since the war began, explained how the federal government is now educating, with millions of pamphlets, with pictures, films, fourminute-men, etc., the mass of people on public affairs. Altogether the political scientists showed a refreshing regard for truth, a wholesome independence of judgment, and a since rethough perhaps too modest, desire to be of service.

though pernaps too modest, desire to be of service.

The discussions of constitutional law brought out very clearly the temper and spirit with which existing institution are being examined. Decisions and judges of the Supreme Court were appraised with the utmost candor and in general the conclusions were by no means laudatory. Dissenting opinions were pointed out as evidence of the somewhat unsanctified character of the court and the fact that constitutional law frequently changes its mind lends color to the supcion that politics is not wholly divorced from that high tribunal.

The economists, like the political scientists, have progressed from the detached, dehumanized study of the phenomenon of wealth to the consideration of the psychology of men in relation to the possession of wealth. Prof. E. C. Haves of the

<sup>&</sup>lt;sup>1</sup>American Sociological Society, American Political Science Association, American Economic Association, American Association for Labor Legislation, American Statistical Association, American Historical Association, American Farm Management Association, Association of Accounting Instructors.

University of Illinois, in what was considered the star session of the economic association's meeting, cleared the ground tor the new approach by calling attention to the fact that every age has had its philosophy to justify the existing order and that laissez-faire had until recently performed that function for our time. Our present order makes life and labor the cheapest commodities on the market and results in conditions that ill befit a democracy. As wealth is now distributed in the United States, the top 1 per cent of the population receives as much income without work as the lower 50 per cent obtains for its labor, and the top 2 per cent own three-fifths of the property. The middle class is declining. A better distribution, rather than equality of income, is the practical aim of those who would arrest the cleavage of classes that is widening, but the class-control of schools and press now makes very difficult the organization of a liberal party and tends to preserve the two old political parties, both of which are conservative.

Prof. John R. Commons of Wisconsin, in the presidential address of the economic association, pronounced the obsequies over the laissez-faire or rather the "let's grab" doctrine, and at the same time knocked the bottom out of the "pork-barrel" as the great objection to government ownership and control. The special assessment of benefits to private property from public improvements can be depended upon to correct whatever tendency localities may have to dip unduly into the public treasury. Through such a system of taxation the basic utilities and such improvements as irrigation, land-reclamation and railroad extensions can be promoted. Rural credit can be extended and subsidies given to roads and education. Quite as important as obtaining the capital with which to do these things is the fact that by keeping capital at home one of the irritants which cause war will be removed. Capital which hunts in backward countries for high profits and big increments influences diplomacy, demands military protection and breeds international disputes. For the job of directing through taxation, the most beneficial use of our surplus, the government is becoming rapidly more expert. Indeed, our public inefficiency is even now little more than a state of mind

The "economic man" of the classical economists was whered off the stage by Prof. Carleton H. Parker of the University of Washington, who introduced the new discovery of the psychological man. This newly found being has some sixteen separate instincts which cause him to behave as he does. As Professor Parker had been testing his ideas among strikers in some of the lumber camps of Washington, the report of his observations of the motives of economic life represented considerable rugged reality.

#### Health Insurance by Common Consent

HEALTH insurance and the conservation and mobilization of the labor supply of the country were the main topics of discussion in the meetings of the American Association for Labor Legislation. Relatively little time was devoted to the question of the advisability of health insurance legislation in the United States, it being quite generally agreed that we should have taken steps in this direction long ago. The great obstacle to be overcome in securing the adoption of health insurance laws would appear to be the lack of popular understanding of the subject, and this obstacle can be removed only by a campaign of education. The main participants in the discussion were members of state legislative investigating commissions appointed to inquire into the question of health insurance and to recommend appropriate legislation. Repre-

sentatives of six such commissions were present—those of California, Massachusetts, New Jersey, Ohio, Pennsylvania and Wisconsin. Views were exchanged regarding the lines of inquiry that commissions ought to follow and also regarding the methods of conducting public hearings. A comparison of the experiences of the various commissions revealed that in nearly every state the first impulse of employers and wage-carrers alike is to oppose the idea of government health insurance, but as both groups come to understand its operation and benefits more thoroughly, their opposition tends to give way. Private insurance companies are usually against the scheme, and physicians and surgeons seem to be divided on the question. Opposition has come also from Christian Scientists, and in agricultural states it is difficult to obtain the support of farmers.

#### The Labor Difficulty Analyzed

IN THE discussions on the conservation and mobilization of the labor supply of the country there was general agreement that we are not at present confronted with a shortage of labor. Our real ailment is that of maladjustment and improper distribution of our available man power. In order to correct this state of affairs, a more complete and better coordinated system of employment agencies was advocated. Opinions differed as to the advisability of securing this end by establishing cooperative relations between the federal and local systems or by bringing all government employment agencies under national control and operation. How to provide the farmer with the help he needs received considerable attention. To a great extent the farmer himself seems to be to blame for his predicament. He does not yet realize that wages generally have gone up and that it is no longer possible to obtain men for the wages he has been accustomed to pay. The conditions of labor on the farm also are such that men generally prefer city work. Relief for the shortage of farm hands might be brought about, partly by improvements in the system of employment agencies, partly by the transfer of men from cities and industries to the farm during the harvest season, partly by inducing retired farmers, women and other unemployed persons to take part in agricultural work, and partly by the offer of better wages and working conditions to farm laborers. The use of city school boys of working age during vacation also was recommended.

There seemed to be no sentiment in favor of labor conscription. Some attention was given to the efforts of the federal government to conserve human life in the war industries by safeguarding workmen against accident. At the last meeting of the association the applicability of the British munitions act to American conditions was discussed briefly. The suggestion of adopting these provisions in the United States, however, met with the immediate objections that our conditions were different from those in England and that even in England the munitions act had been the cause of much dissatisfaction and unrest. According to an investigator of the London Times, it had been the cause of driving one-half of the workers of England to the verge of revolution.

As has been said, all the associations had turned "social," so that in point of view, the sociologists were but a vaguely defined group of thinkers at the big conference. Their most distinguishing mark consisted in that, while most of the other associations talked about social control somewhat in general, they took it for granted and discussed applications of it in particular. Both Profs. George E. Howard of Nebraska and Charles H. Cooley of Michigan submitted thoughtful analyses of the elements of social control of international relations—

Professor Howard, the ideals that must guide, and Professor Cooley, the psychological and social machinery through which it is even now working, and will work, it is hoped, much better in the future. Among the false ideals which now make so difficult amicable relations among the nations are overdeveloped nationalism, territorial aspirations, the notion of war as a good in itself, race and sex conceit, the supposed necessity for economic and political oppression of the masses, and contempt for the idealist. The teaching of world-wide brotherhood must supplant these narrow concepts and democracy must be made to mean something tangible to all

Of the more concrete suggestions for the better adjustment of social machinery was that of Prof. Arthur J. Todd, of the University of Minnesota, for the control of immigration based upon the true demand for labor. Briefly, his plan calls for information as to the true demand for labor, organization of the labor market, abolition of the contract labor provision and the illiteracy test in the present immigration laws and the introduction of the sliding scale as a guide to admitting immigrant labor, with a bonding of the employer who imports labor to cover deportation costs for any laborers who may become public charges and with a provision for the employer to carry unemployment insurance for his laborers. Prof. Carl Kelsey of the University of Pennsylvania thought that the need for conscription of labor is now imperative and that the time is coming when strikers should be treated as traitors. On the other hand, the laboring class must, of course, be protected from low wages and other abuses.

Perhaps the group which assumed the reality of social control with least question was the statisticians, for they simply went ahead planning how to forge the tools with which society is to work out better opportunities and protection for all. Prof. Irving Fisher of Yale cited the recent stocktaking in health of the men within the draft age as a confirmation of what had been known to a few interested people for some time. He drew the conclusion from the large number of rejections that we ought to have a national department of health to conserve the physical well-being of our people. Nation-wide recording of vital statistics should take the place of state action, which at present covers only about two-thirds of the population of the United States. Prof. Allyn A. Young of Cornell demonstrated the urgent need of coordinating the statistical work now being done by the United States government. The war found us in a state of statistical unpreparedness. Since last April, independent investigations have sprung up in many departments and bureaus, which frequently failed to make use of the permanent statistical bureaus. Much work was duplicated and business organizations have been bombarded with questionnaires. The results have been far from satisfactory. A general war statistical bureau to serve all the other bureaus was suggested as the orderly way out of chaos and as a means to obtain a comprehensive view of our national assets, labor, resources and goods.

#### Better Government Statistics Wanted

FROM the discussion of present conditions as regards the vital statistics of our army and navy, it would appear that there is now much room for improvement in the recordkeeping systems of the military establishments. Frederick L. Hoffman, the well-known statistician of the Prudential Life Insurance Company, deplored the lack of anthropometric statistics of the army and in the absence of any scientific knowledge of physical growth and development, he considered a lowering of the age limit of drafted men little short of a crime.

Committees were provided by the American Statistical Association to assist the government in systematizing the federal statistics and in planning for the census of 1920. An interesting and valuable suggestion came from the Children's Bureau that the material in regard to family groups which is recorded on the census schedules should be tabulated, i. e., the number of motherless families, the number of fatherless families, the number of mothers at work, etc. Hitherto the published data on population have related only to individuals.

#### History on the Heels of Current Events

THE historians were quite as interested in the present as in the past. The Russian revolution, the recent Massachusetts constitutional convention, present day politics of China and Japan, found places on the historical association's program. At the closing session of the conference, held jointly by the political scientists, the economists, the sociologists and the historians, Prof. Wallace Notestein of the University of Minnesota described the uses which German magazine writers, geographers, politicians and others have made of history to engender hatred of the British empire, to glorify Germany's history, to magnify her wrongs, to point to her manifest destiny of colonial expansion and reunion of all the German peoples of Europe. The partial truth of that which they taught has made it extremely difficult to combat their conclusions. While the British empire is a solid fact, Professor Notestein was inclined to doubt that John Bull had been the consistent villain "through five acts" that he had been depicted in Germany. Anyone who believes that England's methods of acquisition were cunning plots, faultlessly executed, has only to stay a little while in the British Foreign Office, said R. H. Brand, deputy vice-chairman of the British War Mission to this country, to realize that British foreign affairs are not handled that way. Mr. Brand viewed the "British commonwealth of nations" as the one successful experiment in internationalism which the world has thus far produced.

Edward P. Costigan, of the United States Tariff Commission, ably represented the administration's position in regard to economic alliances. The "war after the war" policies will find little or no support in this country, and the United States is distinctly against selfish and exclusively economic leagues and economic discriminations which impose such stubborn barriers against world federation.

The farm managers conferred very largely with the econonists and those interested primarily in labor legislation. The accounting instructors likewise flocked with the economists. Indeed, the tendency of each group of specialists to harmonize its views and teachings with those of its brothers in the allied sciences was one of the outstanding features of the conference and one of the best omens for the successful growth of the new culture of knowledge of and interest in the socializing procsesses now going on in the world.

#### CHICAGO'S TANGLED CITY FINANCE

A NINTERESTING development is arising out of the critical situation in which the city administration of Chicago finds itself, owing to shrinkage and shortage in its revenues. The chairman of the City Coincil's Finance Committee sent out to many social and civic agencies an appeal for cooperation in its efforts to secure a special session of the legislature as the only means of affording prompt and adequate relief.

Among the causes to which the shortage is attributed are the building and other departmental equipments, which were added by bond issues without any provision for operating and maintenance expenses, such as the contagious disease hospital, the waste disposal plant and the municipal pier; the loss of saloon license fees, estimated at \$2,000,000 annually, due to the reduction by 900 in the number of applications for and renewals of licenses under the depression in the liquor trade since the suspension of the manufacture of distilled liquors; the assignment of much of the police force and Fire Department to guard against war risks, thus creating the necessity for an immediate increase of men in both of these departments, as well as in the Department of Health; and court decisions affecting the revenues.

Among the responses to this appeal those of the Chicago Bureau of Public Efficiency, entitled Chicago's Financial Dilemma, and of the Woman's City Club, under title of The City's Present Financial Situation and Some Available Remedy, contained trenchant criticisms and specific suggestions for a thorough reconstruction of the city's administrative methods. tive methods. While expressing its willingness to cooperate in securing legislative relief "whenever it is shown that such a session is necessary to provide financial relief for the city and an adequate program for relief has been outlined," the Bureau of Efficiency challenged the immediate necessity for such action and denied that any adequate program for obtaining permanent relief had

been outlined. "Civic organizations do not serve the public to advantage," it adds, "by blindly joining—or refusing to join—in a call for the legislature to raise taxes except when a convincing and authoritative statement has been made by the responsible city officials as to just what amount of additional revenue is actually required by the city, for just what it is to be expended and just how it is to be raised."

The Woman's City Club points out specific ways in which savings could be made that would in large part cover the impending deficit. Among these ways are suggested economies in the collection of city waste and street cleaning by redistricting the system; reducing the number of police stations; centralizing purchasing, testing and inspection; eliminating extra city hall holidays; cutting out sinecures in the Law Department, the municipal court clerks' and bailiff's offices, and consolidating many bureaus. In view of these considerations, the Woman's City Club does not think the city government entitled to support in seeking authority for levving of an extraordinary tax until the situation can be laid before the citizens more definitely, with detailed supporting figures, until the possibilities of various economies shall have been ascertained, and until the City Council shall have taken "definite steps to secure a comprehensive survey of the city's finances and administrative organization for the purpose of working out a broad, business-like plan

for municipal finance, based upon the fact that municipal financing and administration are continuous and can only be effectively worked out on a longtime basis."

while the city comptroller resented these criticisms as "irrelevant," the council's finance committee proceeded to call into conference members of the state Senate and House of Representatives who are resident in Chicago. The joint committee of these three groups now issues a recommendation to the governor to call a special session of the legislature to enact emergency measures authorizing the levying of a special tax for two years, not to exceed five mills on the dollar, to help maintain the Police Department, and empowering the city to require certain businesses to pay a license

The legislature is further urged by this committee to appoint a joint committee of senators and representatives who, with the City Council, shall immediately consider the legislation necessary for a comprehensive reorganization of the city of Chicago, providing for a complete survey of the city's present and possible financial resources, in order that legislation may be enacted to meet financial requirements for the ten years following January 1, 1920. Indicative of the direction and extent of the changes in mind are the specific recommendations that the term of aldermen be extended from two to four years, with the right of recall after one full year's service, and that the offices of the city clerk and city treasurer be filled by appointment of the City Council.

Meanwhile, there are pending proposals which may be taken as signs of change. No city budget has been passed for the current year, but, as heretofore in similar emergencies, department heads have been told merely to keep within certain reductions of last year's budget. A resolution is pending in the City Council, with little chance of passing, inviting the Chicago Bureau of Public Efficiency to make a thorough investigation of all the departments of city govern-

#### CITY MANAGER PROPOSED AS THE WAY OUT

ND most significant of all is the previous publication by the Bureau of Public Efficiency advocating the city manager plan for Chicago and including the draft of a bill reorganizing the city government in accordance with that plan. It proposes to reduce the number of aldermen from 70 to 35, one from each ward, serving a term of four years, the mayor or manager, city clerk and comptroller to be elected by the council, the former having a seat in the council with the right to speak and introduce measures, but not to vote. It provides for non-partisan elections by eliminating party circles and columns from the ballot, and by having nominations made only by petition signed by not less than I per cent or more than 3 per cent of the registered voters of a ward. A recall election may be demanded within one year after an alderman has taken office.

No definite movement has yet been made to include this measure among the objects for which the special session of the legislature may be called. Its friends feel grave doubt as to any chance of its enactment, except as a part of a very comprehensive plan and program for the entire reorganization of the municipal government. To the formulation of such a plan a far more concerted action of Chicago's civic bodies and city administration will be required than seems to be possible while the present distrusted city administration is in power during the next year and a quarter. In case the call for a state constitutional convention is ratified by the referendum vote of the people, Chicago may gain charter rights hitherto denied. But in the event of that possibility, its forwardfacing citizens have no time to lose in getting together to formulate a larger ground plan and a progressive program worthy of the future Chicago.

#### THE SOCIAL BENEFITS OF DAYLIGHT SAVING

UFRRILLA methds of committee procedure prevented, during the special session of the present Congress, the enactment of Senator Calder's daylight-saving bill; the Senate adopted it by unanimous vote but it failed in the House. Hearings on this bill, it has been announced, will be held this week or next by the House Committee on Interstate and Foreign Commerce. Supporters of the movement for turning the clock forward by an hour during the summer months are uniting upon this bill which, having only one house to pass, has a better chance of being enacted

than either of those introduced in the House by Representatives Carlin and Borland.

Similar laws to gain an extra hour of daylight for work and recreation have, during the last two years, become effective in Great Britain, France, Germany, Austria, Italy, Holland, Denmark, Norway, Sweden, Portugal, Australia and Ireland. While for the most part the respective acts have been in force too short a time to prove conclusively their effect on the economic and social life, this effect, insofar as it has been observed, forms a potent argument for adontion of some such measure here.

The chief source of information on the social effects of daylight saving is a report recently issued by a committee appointed by the British Home Office to enquire into the social and economic results of the summer time act, 1916. "Taking the evidence we have received as a whole," says this committee, "we can unhesitatingly say that the vast preponderance of opinion throughout Great Britain is enthusiastically in favor of summer time and of its renewal—not only as a war measure, but as a permanent institution."

In the matter of health, Dr. Frederick Taylor, president of the Royal College of Physicians, after inquiry among fellows of the college, expresses the view that the additional hour of daylight has tended to improve health "from the well-known physiological effects of light upon the biological processes."

The danger that the arrangement might curtail the number of hours given to sleep with had effects on health, especially of children (mentioned in the SURVEY for May 5, 1917), gave occasion to a special investigation; 54 per cent of the English and Welsh education authorities and 20 per cent of the Societish school boards had evidence confirming the existence of this danger, but the majority reported that only a limited number of children were affected, or that the tendency was confined to the first few weeks before people were fully accustomed to the change.

Warnings were issued to parents through the school medical services and through care committees, and the committee suggests that action of this kind should be made more effective and more general and that all teachers should be instructed to report to the care committees all cases showing symptoms of loss of sleep. The Women's Cooperative Guild and many social settlements recorded the same tendency to stay up late in the evening and helped in spreading popular education on this point.

Most marked has been the effect of the additional hour of daylight on recreation. The warden of the Robert Browning Settlement in London stated that "in the height of the summer it was as though a Saturday atternoon holiday had been added to each day." Edward Cadbury, in a report from Bournville, mentioned a great increase in the membership of the athletic club and in the number of persons playing outdoor games. The open air swimming bath was more fully used than ever before, and the gardening classes for boys and girls were able to continue two-hourly meetings a month longer than in previous years.

A consensus of opinion is reported on the part of police authorities to the effect that the general tendency to spend an extra hour of the evening out-of-doors and the easier maintenance of order in daylight had tended to improve the "general moral tone." In some districts, a distinct lessening of juvenile offences is attributed by the police in part to the fact that during the operation of the act boys were expected to be home in daylight.

The advantage of the extra daylight to the cultivation of allotments and gardens is obvious. Favorable evidence on this point is very strong.

Space does not permit to reproduce the committee's evidence on the marked contribution of the scheme to the saving of light and coal and to increased production in industry and agriculture. The estimates of the percentage of reduction in consumption of gas for lighting purposes varied from 2 per cent to 26 per cent, and other economies were equally measurable.

#### WHEN TOWN AND COUNTRY COOPERATE

THE war has in many places and in many instances broken down that most powerful barrier to social progress, mutual ignorance. How common interests and common difficulties are sweeping away the age-long misunderstandings between town and country, between industry and agriculture, is told in many letters from England. The part played in this rapprochement by the cooperative movement, is explained in a recent letter to the Suxvey by Percy Redfern, editor of the Wheatshead, one of the organs of the Cooperative Wholesale Society.

This society, composed almost entirely of urban wage-carreers, in 1915 established an agricultural department which in the two years since past has become an agency of great significance. It is, for the first time, linking together the organized cooperation for production on the part of armers to the organized cooperation for consumption on the part of industrial workers, acting for the one as a market and for the other as a source of supply. Overcoming all wartime difficulties, this new venture has proved "one of the most successful de-

partments ever commenced by the

By accepting and executing large government contracts on the narrowest margin and by setting prices which proved an effective check to profiteering, the English cooperators have done not a little to aid the country in war time. Allowances paid to 5,100 enlisted employes and liberal support of the various war loans were other proofs of patriotism.

When, at the outbreak of the war, many private firms broke their contracts and a food panic threatened, the Cooperative Wholesale Society increased its productive supplies by 41½ per cent in one year, and its membership by 24 per cent. A telling illustration of its efficiency in meeting a war energency was given when, after the Dublin riots, the society in one day chartered and loaded at the Manchester docks a "food ship" with 25,000 uniform family parcels of groceries and an equal number of small bases of notators.

Yet, the pre-war attitude of the government to cooperation as a menace to the established order rather than an aid to social peace, says Mr. Rediern, persists. Unjust treatment in the matter of taxation and a deaf ear to the counsels of cooperators in the matter of food control proved so humiliating and were so deeply resented as to lead directly to the entry of the cooperative movement into party politics [see the SURVEY for November 24, 1917].

In spite of this hindrance, the expansion of the movement in war time is remarkable. In the three years and a half of war the C. W. S. increased its membership to 2,710,000 — by over 400,000-and its sales to \$300,000,000 a year. Of special interest is the extent to which the growth of its operations has forced the C. W. S. to become a landowner in order to ensure the most necessary supplies of raw materials for its industries. In six counties of England, the society now owns 12,430 acres which supply potatoes, milk and other produce. Two small land acquisitions in Norfolk protect the timber needs of the society, and a small coal mine in Northumberland was acquired in preparation for the sinking of a new shaft and the working of new seams.

The urban holdings of the company, of course, are extensive. Recent realty purchases added an oil mill in Liverpool, a flour mill in Birkenhead, a margarine factory in Irlam and various sites for new factories or extensions for textile, boot, hardware and various manufactures.

More important are the foreign and colonial land possessions of the society. In western Canada, the C. W. S., jointly with the Glasgow society, recently bought 10,000 acres of farm and

prairie land on which to commence large scale wheat-growing. In India and Ceylon, it brought its joint possessions with the Scottish C. W. S. to over 20,000 acres of tea gardens and teagrowing land. In West Africa, it extended its range to Lagos, in Nigeria, and, for its cocoa needs, again in companionship with the Scottish sister society, to Accra on the Gold Coast.

### HOUSING REFORM FROM / LOCAL STUDY

THE report on housing conditions in the city of St. Paul recently presented to the Housing Commission of the St. Paul Association by its director, Carol Aronovic, offers evidence that a painstaking survey of existing conditions is an essential preliminary to any effort for the general improvement of housing conditions. It answers the critic who urges "action" and begrudges the time and money spent upon investigation.

For, the most interesting result of Mr. Aronovici's labors is its bearing on the idea so widely prevalent that some sort of "standardized" housing law, minutely regulating on general principles every detail concerning construction, occupancy, repairs and the like, will ensure wholesome home surroundings for every community. For instance, it was found that the habits of immigrant groups, often largely responsible in other cities for a lowering of housing standards, have little to do with housing at its worst in St. Paul. Here a large remnant of dilapidated yet occupied old buildings and lack of sufficient control over the structural qualities of new buildings are the two most important factors. The conditions under which native Americans were found to live in the areas studied were no better than those of the newcomers.

Again, in contrast with other northern cities, room congestion in St. Paul is not a serious problem. Owing to insufficient legal control, some cases of overcrowding found were appalling; but there were comparatively few of them. and on the whole the poor are not badly off for room to live in-structural qualities apart. The shortage of dwellings was not, as is often thought most severe for those least able to afford an adequate rent but, on the contrary, most pronounced in the case of families with several wage-earners or otherwise able to afford something a little better than a minimum of house room.

Street development, especially in the poorer sections of the city, was found to tend toward the monotonous gridiron system; and although the city has been prevailed upon to adopt for a limited area a plan drawn on modern lines by Wilhelm Bernhard, of Chicago, with the assistance of Mr. Aronovici, the commission has found it necessary to include

in its recommendations a strong plea for the appointment of an expert commission to provide the city with a careful plan for its future growth, both as an industrial and a residential center.

A comprehensive city ordinance, based upon a study of housing legislation in thirty-one cities and states, is offered by the report. It contains many other suggestions of detail which will be found useful in cities which have already accomplished to their satisfaction the more fundamental task. Among these suggestions is one for the establishment of a joint housing bureau by the social agencies of the city for the removal of dependent families to better houses and improved surroundings which, the investigation discovered, can often be obtained at no greater cost than the poor quarters where such agencies, from lack of knowledge, sometimes maintain families.

Good examples of a better type of dwelling for families of moderate means, examples which show what can be done with careful planning at no more cost than the unsatisfactory type of house put up by the average speculative builder, are one of the obvious constructive tasks in St. Paul as elsewhere. To this effect, a movement is on foot for the creation of an association which would finance a small housing experiment on a lot of six acres for which an option has been obtained. The plan and some cottage elevations by Thomas G. Holvoke, a member of the commission, are reproduced in the report and help to give a touch of hopefulness to a publication which otherwise, like most housing reports, might have presented too gloomy a picture of the situation.

### WORK OF THE ZEPPELINS AT HALIFAX

WHY so many eye injuries were re-ported from Halifax as a result of the recent disaster [the SURVEY for December 29, 1917] is thus explained by Dr. E. R. McKenzie, of the Massachusetts Eye and Ear Infirmary, a member of one of the units sent from that hospital to Halifax. Writing to the Boston Medical and Surgical Journal, he says: "Of the thousands hurt, approximately one-third are eye injuries. . For a long time the people of Halifax have been constantly on guard against the possibility of hombardment from the sea or by Zeppelins (in hotel rooms a large sign warns tenants to lower all window shades instantly when lights are turned on, under a penalty of \$5,000). . . Therefore, when a rumbling was heard and clouds of dark smoke were seen, thousands ran to their windows and looked up into the air. Then came the explosion which shattered nearly every window right in their faces."

Dr. Mather, the first oculist to go

from Boston, worked alone for three days without sleep. He did more than seventy-five operations, some of them in a room where the snow blew in upon the patient and himself.

### WORKMEN'S COMPENSATION IN AN EXPLOSION

WILL a workmen's compensation law stand the strain of a munitions explosion? The Eddystone disaster of last April has applied the test to the Pennsylvania law and the Halifax disaster (both were due to explosions of munitions) adds timely interest to the outcome.

The Eddystone disaster created a liability of about half a million dollars for which the company was self-insured. On account of the destruction of important records, it was somewhat difficult to know-exactly how many persons were in the buildings when the explosion occurred. From such evidence as has been available, the number of dead has been fixed at 128. Eightynine persons entitled to compensation were injured.

Immediately upon receiving word of or intelligence to flabor and Industry established a hranch office in Clester, Pa, and advertised broadly the opportunities for compensation which the state law afforded. Of the injured, all but six afforded. Of the injured, all but six access were compensated at once. As special referee in this case, it is probable that they have been settled without revouse to the compensation board.

All of the death claims were adjusted where the bodies were identified and where there were dependents. One mouth after the explosion but twenty-two cases had been contested and several of these have been adjusted or decided since that time. The disputes were largely on the question of the dependency of parents. In cases where bodies could not be identified, the referee assigned to the case, William B. Scott, allowed considerable latitude as to what constituted evidence necessary to prove loss of a relative. It was decided to be sufficient if competent witnesses testified that the missing person was seen to go into the building that day.

All things considered the law has operated with remarkable facility. About the only serious difficulty arose from the fact that some of the dead and injured persons had dependents in Russia and other foreign countries with which communication is now difficult. In some cases it has been impossible thus far to the secure the requisite proofs of birth, marriage, etc. However, carnest efforts have been put forth in which the consults in nearby cities have materially assisted. The Russian consul at Pittsburgh came to Chester and took an active part in the

settlement of cases where Russian de-

Undoubtedly the workmen's compensation law is a powerful agent in the prevention of destitution, but, like every other social law, it does not fit ever jindividual case nor does it do the whole job for those whom it is designed to help. The State Committee of Public Safety of Chester and the Associated Charities of Delaware County, Pa., of which Prof. Louis N. Robinson of Swarthmore College is president, found a number of instances in which the law needed to be supplemented by private efforts, if suffering was to be averted.

In the first place, compensation is not paid under three weeks, i. e., two weeks interim and one week to wait for the first payment to accrue. Without some outside assistance, the family that lives near the margin finds itself stranded at a very critical period. When the claim is disputed, this situation is, of course, aggravated by the inevitable delay. Where evidence has been destroyed, when relatives are inaccessible, where witnesses are foreigners speaking unfamiliar dialects, many complicated problems are found to arise and hold up the operation of the law even though there is the best of intention on the part of the employer. And then when the money does come, sometimes it is not enough. In many families the number of dependents is so large that the allowance proves insufficient and has to be supplemented by private philanthropy. In some instances, this need may extend over several years. And even when the allowance is fairly adequate, it does not automatically clear up all the family problems or obviate the need for sympathetic and intelligent service.

There are the many perplexing problems of starting life on the new basis. Those permanently disabled face all the discouragements that beset the disabled soldier. As Professor Robinson and his committee found out, someon needs to help in the planning and the establishment of the little business, in finding the part-time job or the work that the sightless or the armless or the crippled can do. Someone is needed to hearten and cheer the man who resumes life's burdens under the heavy handicap of physical disability.

The disruption of the many homes that follows such a calamity invariably reveals innumerable hitherto neglected needs—needs that once known, can no longer be ignored. The tuberculosis case in the family, the illness of other kinds, the mental disorders that should have special care, the bad housing, the lack of recreation, the poor distribution of family burdens among the members, language difficulties—in short, all of the problems that confront the case worker who seeks to help those in difficulties.

Money, important as it is, cannot take the place of the trained and sympathetic

One of the ways in which these people need protection and assistance, even though the law would seem to have made quite ample provision, is in the burial of the dead. As mentioned above. the law allows one hundred dollars for burial expenses, yet when undertakers bills were presented, in many cases the allowance had been considerably exceeded and the relatives were hard pressed to make up the difference. In some cases it seemed as if undertaking bills had been fixed at a point to absorb the compensation allowance, any insurance there might be and whatever spare money the family might have on hand. Advice and help in making the funeral arrangements would have saved these people much worry and deprivation Those who have helped the Eddylater stone families regret that in the confusion this detail did not receive attention at a time when these excessive charges could have been prevented.

The experience at Eddystone suggests an interesting new phase to the administration of workmen's compensation. Just as courts, hospitals and other institutions which exist for the doing of some highly specialized job have found that their effectiveness is increased many-fold by having some means of adjusting their special service to the particular need of the individual they seek to serve, so workmen's compensation boards may sometimes find themselves similarly in need of the seasoning of personal service.

### THE DEATH OF CHARLES M. ROBINSON

CHARLES MULFORD ROB-INSON, who died on January I, was not only one of the world's three pioneers of modern city planning (the other two being Patrick Geddes of Edinburgh and the late Camillo Sitte of Vienna), but a courageous municipal reformer, a true democrat, and withal a most lovable character. His approach to city development originally was that of civic aesthetics, and his first work, The Improvement of Towns and Cities, opened up to architects the world over a new vision of public usefulness.

In his later years he became more and more absorbed in the technical and administrative problems of city building and, both in his books and in practical application, contributed solutions of farreaching importance. He was the first, in the English-speaking world, to occupy a university chair of civic design, at the University of Illinois; and though the city planning projects which he personally helped to carry through—notably those of Denver, Omaha. Colorado Springs, Los Angeles, Columbus, Detroit, Honolulu, Oakland, Fort Wasne.

-are lasting monuments to his genius, he will be remembered no less for the soundness of conception and breadth of outlook with which he inspired the work of other men. He was the first secretary of the American Civic Association. To the SURVEY, Charles Mulford Robinson was a constant friend and adviser. He acted as contributing editor from 1907 to 1912 and, during that time, was in charge of its department of civics. In this capacity he never tired of expounding the theory that the City Beautiful cannot be planned on paper merely but must organically arise from a healthy community spirit and from a foundation of social justice and civic statesmanship.

"The replanning of cities," he wrote in 1907, in introducing a group of articles on this subject in the SURVEY, "must take the broad and comprehensive view, considering the needs not of districts only, but of the community as a whole. It has little to do with details, such as billboards, pavements, etc., but it is intimately concerned with the problems of transportation; with the convenience of the streets for traffic purposes; with the proper location, and, it possible, the grouping of public buildings; with the development of neighborhood centers which shall become a moral and social force; with the location of parks and their accessibility to those who most need them; and with the attractive development of residential and suburban tracts. . . . A man might be wondrously learned in engineering, in landscape designing, and in architecture, but unless he is so sympathetic to the spirit of cities that he can catch the individual expression of each, he must fail in the making of city plans."

It was this sympathy, this deep understanding for the environmental needs of every class of citizens in the individual community, which has given him a claim to the lasting gratitude of his countrymen.

### THE HIGH COST OF COUNTY IAIL FEES

AN INQUIRY into the prevalence and effects of the fee system in connection with county jails and the office of sheriff, with special reference to Pennsylvania, shows what a large task the American people has before it to reenact a principle laid down in the Magna Charta. In the great charter of Henry III, granted in 1217 in confirmation of the Magna Charta of 1215, it was provided that all sheriffs, coroners or other king's officers "shall take no reward for doing of their office, but only of the king." The purpose of this was to prevent extortion and the purchase of justice. Gradually, however, the rule was forgotten, or fees were allowed to be taken in particular circumstances, so that by the time colonization began in this country, the fee system of paying sheriffs was rampant in England. Naturally, therefore, it was adopted by

settlers in this country.

Today, fifty-one out of sixty-seven counties in Pennsylvania have the fee system. This means that they pay their sheriffs a per capita per diem allowance for boarding prisoners. The other sixteen counties contract for the food and pay the sheriffs salaries. A study just made by John E. Orchard, under the direction of Prof. Louis N. Robinson, of Swarthmore College, and shortly to be published by the Committee on Philanthropic Labor of the Philadelphia Yearly Meeting of Friends, compares these two methods of paying sheriffs.

Under the fee system the allowance to the sheriff ranges from twenty to fifty cents per prisoner per day. The average is forty-two cents. Whatever the sheriff saves of this amount, after feeding his prisoners, is his profit. Pennsylvania sheriffs do not willingly reveal their savings from this source. These may be guessed, however, by estimating the cost of feeding prisoners under the contract and salary system. In the sixteen countries having this system the maximum cost is twenty-four cents per prisoner per day, the average being thirteen and one-half cents. Roughly, therefore, the profits made by fee-paid sheriffs amount to the difference between forty-two cents and thirteen and onehalf cents per prisoner per day. In other words, for every cent the sheriff spends on the food of his charges, he puts over three cents into his own pocket.

Another source of income for sheriffs is the fee paid for committing and discharging prisoners. In at least twentyfour counties, every time the jail door opens to receive a prisoner or closes behind one, the sheriff is paid. He receives an amount ranging from twenty-five to

fifty-six cents.

The effect of this, says Mr. Orchard. is not only to supply graft for the sheriff, but to rob the public. He estimates that the sixteen counties under the contract system pay annually for the board of nearly 1,600 prisoners \$20,000 less than is paid by the fifty-one counties under the fee system for boarding 766 prisoners. (The contract system is in operation in the larger counties and therefore boards more prisoners than the fec system.) Again, Eric county, with a jail population of seventy-one, pays each year under the fee system \$11,091 for the board of prisoners, while Berks county, with a population of seventy-three, pays \$3,730 under the contract system.

The adoption of the contract system in the fifty-one counties not now having it, Mr. Orchard estimates, would save \$62,434. A larger salary would have to be paid to the sheriff under that sys-

tem, but Mr. Orchard questions whether this increase would consume the entire saving, an average of \$1,200 for each county.

The fee system is also bad for the prisoner. A sheriff who profits in the feeding of his prisoners will too often provide food short in quantity and poor in quality. The fee system, moreover, tends to increase the number of arrests of petty offenders. Where a sheriff is paid every time the jail door opens or shuts, the impulse to make many arrests is strong.

A number of states have abolished the fee system entirely, though many still have it. Mr. Orchard goes beyond such a measure, however, and recommends the abolition of the county jail itself. A small number of state controlled institutions for minor offenders, such as the Indiana Farm Colony for Misdemeanants, are far preferable, he thinks, both for the prisoners and the public, to a large number of local jails, some of which house only a few prisoners at a time. Twentyone counties in Pennsylvania report jail populations averaging less than five, yet a jail must be maintained and a jailer provided in each of these. Mr. Orchard shows that for years the abolition of the county jail has been recommended by students of penology, and concludes that only by a complete overhauling of the corrective machinery of the state can justice be done both to the offender and to the society that wishes to protect itself against his acts.

#### THE PASSING OF THE DUNCE'S STOOL

I 1 1S a far cry from the New England schoolmaster who was apt to regard all pupils as equally endowed with brains and will power, and therefore equally possessed of an evil spirit when they fell behind in their work, to the modern special class for backward and mentally deficient children. The dunce's cap and the high stool were doubtless crude forerunners of this device for making education "take." Nevertheless they seem to have had one advantage: they were simple, and to apply them one did not need to know what other communities had done to make them effective

Special classes have grown so rapidly of late that few states have any carefully worked out program with respect to them, or much information concerning what is done by cities and towns within their own borders. For this reason, unusual interest attaches to a study just made by the Massachusetts League for Preventive Work, which is a cooperative effort of nineteen social service agencies of Boston, to prevent some of the causes of misery found in their work with families.

The league found that fifty cities and

towns report some form of special instruction for either feebleminded or backward, and that 300 report none. Twelve of the fifty have classes exclusively for the feebleminded, thirteen exclusively for backward children and sixteen place feebleminded and backward in the same special class. The other nine give extra help in the regular classrooms to individual children who are behind their classmates.

Commenting on the difference between classes for backward pupils and those for the feebleminded, and on the undesirability of placing both groups in the same class, the league's report says:

"Classes for the backward should not be confused with classes for the feebleminded. They are quite distinct in purpose and method. Pupils may be behind their grades because of ill health, change of residence, insufficient nourishment, ignorance of the language, or for many other reasons. Special class instruction often helps children thus handicapped to gain the normal grade for pupils of their own age. On the other hand, the special classes for the feebleminded provide for the child who can never maintain a normal grade in school because of an inherent defect of the brain.

"No greater injustice could be done to a child than to surround him with the feebleminded at so critical a period in his life, yet only four cities in Massachusetts secure the rights of the child through examination by an experienced psychiatrist. Dr. Arthur Jelley is employed by the city of Boston for more than half time as psychiatrist, and no child is placed in a special class for mental deficients until he has made a detailed examination and certified to the fitness of such training. Two other cities employ psychiatrists for this purpose and a fourth has all candidates for special class work examined at the Waverley state school [for mental defectives]. Twelve place the decision in the hands of the medical inspector in consultation with superintendent or principal. The others rely upon the judgment of the superintendent of schools, principal, regular or special class teachers."

The method of selecting pupils, says the report, is undoubtedly the source of much of the difficulty underlying the failure of certain towns to establish special classes permanently after a trial of a year or two. Dr. Walter E. Fernald, superintendent of the Waverley school, is quoted as saying that to his knowledge "ion classes have ever been given up where the pupils were selected wisely."

The report discusses other aspects of special classes, particularly the training of teachers for them. It points out that of the 300 school centers sending in negative replies only seven are in cities of considerable size.

### Communications

#### WHICH COMES FIRST?

TO THE EDITOR: I write to see if any of your readers can help ne out in the matter of finding some book or pamphlet that will tell me the logical and scientific order in which to teach my two little girls, aged eight and six, the indoor games of lotto, partessi, checkers, backgammon, halma, chess and the lifterent card games. Which should come first, checkers or parches? Any information will be welcome. If the editor can answer this offhand, I shall be much pleased, or if he cannot, if he will insert it in the SURVEY, I shall be much obliged.

WALTER C. GREEN. [Secretary Meadville Theological School]

Meadville, Pa.

### EXHIBIT MATERIAL WANTED

To the Editor: We are enclosing with this letter a copy of the Dallas Survey. In this considerable mention is made of a proposed child welfare exhibit, which promises to be quite extensive.

You have been of kindly service to us where we have written you for your advice relative to exhibit material. We are hopeful that our planned campaign of education will be far-reaching in its influence, and to that end are seeking every form of educational material that can be utilized in such an exhibit.

May we again encroach on your time and patience, asking that you give us all possible assistance toward building up a creditable and effective exhibit?

We are interested not only in charts and panels, but in mechanical appliances for attracting attention to specific things as well as stereopticon lectures, moving pictures and methods of demonstration of various forms of child care. We shall appreciate any service that you can render us in guiding our efforts in the right direction.

ELMER SCOTT.

[Executive Secretary Civic Federation]
Dallas, Texas,

### ALCOHOL IN FRANCE

To the Editor: I was troubled by Virgil V. Johnson's communication in the Survey of December 8 giving the impression that our troops in France were practically allowed to enter saloons and drink wine and beer.

The British Board of Liquor Con-

trol, in a careful investigation, found that 40 per cent of men examined in London (1916) were getting intoxicated on beer and stout alone. Beer and stout run only from 3 per cent to 7 per cent alcohol while French light wines run from 6 per cent to 12 per cent, and there are all the heavier wines besides. A small glass of whiskey containing 3 table-spoonsful has about the same amount of alcohol as half a pair to 8 per cent wine.

Once men are given permission to enter saloons, nobody can control what they drink. How can men in charge of training camp activities approve a policy so inconsistent with that of Congress towards our cantonments here?

With the French government ready to cooperate with us in every way, we must certainly do better by our boys in France than Mr. Johnson's letter would indicate we are doing. Mothers are every grateful to the Y. M. C. A., but they know that the Y. M. C. A. cannot do it all.

JOSEPHINE R. HARRINGTON.

### FOR SOLDIERS' DEPENDENTS

TO THE EDITOR: In case it has not been brought to your notice, I commend to you the report published a few weeks ago by the atautory committee entrusted with the first year's working of the war pensions act, 1915 (Cd. 8750) price Is 3d). Reading between the lines in that report, you will see what strong efforts were made by Sir Cyril Jackson to retain for the state the full benefit of the voluntary effort which had been drawn into work for the soldier and his dependents prior to the passing of the act.

The act, I need hardly say, was the work of "Labour" and local authorities to whom voluntary social work is anathema. We are much impressed by what strikes us as the far better tone obtaining in America on this subject. The idea adopted by "Labour" in this countrythat there is something shameful in the citizen voluntarily contributing his time or his money to the increased comfort of his fellow citizen who is serving or has served as a soldier and of that soldier's dependents-appears to us one of the utmost vulgarity, and we welcome the apparent absence of it in your great republic.

I appreciate the privilege of studying social work in America in the pages of the SURVEY so much that I wish to say what a pleasure it is to me to answer any queries you care to put to me at any time, J. C. PRINGLE.

[Secretary, Charity Organisation Society]

### London, England.

### BOY "CONVICTS"

TO THE EDITOR: When I read in the Outlook of December 19 of a boy who had been sent to a juvenile correctional institution in New Jersey, and kept there twenty-two months, for (according to the official statement of his offense) "breaking and entering a tailor's shop to find a place to sleep, his father having turned him out of doors," I could hardly believe my eyes. But the headnote of the article vouched for the experience and reliability of the author, Arthur D. Chandler. Then, on the 26th, came another article by Mr. Chandler, telling, as though it were not an exceptional incident, of a fourteen-year-old boy who had "served time" for several years in the same institution, being sent there by a juvenile court "because he was a dependent boy.8

And now comes Mr. Culp's article in the SURVEY for December 29, telling of six immates of the North Carolina state prison, serving sentences ranging from fifteen years to life, whose average age was twelve years and four months the youngest being eleven.

But Mr. Chandler took the lads from the New Jersey reform school to his boys' farm, and the brave governor of North Carolina nerved his arm to sign pardons for the little boys, thus "reversing executive custom as well as acting counter to well understood public

opinion."
Is there some mistake, or are children really treated like this by the courts of New Jersey and North Carolina?

EDWARD F. WAITE.

[Judge of the District Court.] Minneapolis,

### THE FUSION DEFEAT

TO THE EDITOR: The appearance of an article such as Tammany by Default [the SURVEY for November 17, 1917] in a professedly scientific journal of social work as the SURVEY claims to be would fill one with amazement, were one's belief in the scientific attitude of the SURVEY not already considerably shaken by former articles of a decidedly partisan and therefore unscientific character. Had this article appeared in the columns of the venal, plutocratic press of New York and Chicago one would not be surprised, as it contains the kind of nonsense with which the readers of such papers are daily stultified, but when it appears in the SURVEY that claims to be scientific, then one feels he must revise Webster's definition of "scientific." Perish the thought that the SURVEY

should relinquish its claim. Webster must be wrong.

I do not object that the author of this article is an ardent supporter of New York's Monopolizer of Patriotism for that is his privilege, but I do object to his writing in a supposedly scientific review of the election inaccurate, unjust and unscientific insinuations and assertions without a scintilla of proof about the opposing party. I am not an admirred of Tammany in any way, but I protest against the wanton and unjust abuse even of a Tiger.

He says in speaking of the issues of the campaign, "The issue should have been Tammany versus good government." This is a smug and complacent assumption that Mr. Mitchel is a monopolizer of good government as well as of patriotism. Truly he must be a still greater paragon than even the subsidized metropolitan papers painted him, but where is the evidence to prove that he has a monopoly on good government? What evidence is there to show that Tammany will not afford good government? The author produces none except the bald, unsupported and unwarranted assertion later in the article, "Tammany has never before governed in the interest of the city," and leaves us to draw the conclusion that therefore it never will. The assertion is in all probability false, and must at all events in justice and in logic be so considered until proof of its truth is adduced, but even granting that it is true, does it follow necessarily that Tammany never will "govern in the interest of the city?" Evidently not, and unless Tammany is composed of blithering idiots as well as knaves, in the present juncture it will govern well. Wild assertions of this kind in a supposedly scientific journal poison the wells of thought of the uncritical mind.

Furthermore the article sins by not being honest and straightforward in stating what was probably the determining cause of Mr. Mitchel's defeat. It contains one strikingly true sentence, "The election was lost at least two and perhaps three years ago," but fails to continue that then this great patriot and curled darling of predatory wealth maintained in office men who had conducted a campaign of lying, calumny, and misrepresentation against certain charitable institutions, even after it was proved they had lied, and they had been compelled to retract what they had said. These men are in office even unto this day by Mr. Mitchel's favor. Such things are not readily forgotten, and it takes more than the camouflage of false and frantic patriotism to blot them from hearts of red-blooded men that have seethed and boiled with righteous indignation at the shame and injustice of it all.

One of the causes given by the writer of the article in question for Mr. Mit-

### James McCutcheon & Co.

Fifth Avenue, 34th & 33d Streets, N. Y.

The people of New York have shown they care nothing for ideals and reform that are attained by lying, calumny and misrepresentation, and that they can recognize a knave even when he drapes himself in the flag of his country and wears a self-imposed crown of martyrdom as well as a halo of sanctity conferred on him by a windy, subsidized

All the reflections and insinuations against Tammany with which this article bristles are in reality reflections and insinuations against Mr. Hylan, for

the good or bad government of New York for the next four years will depend upon him, as the alleged good government of New York for the last four years depended upon Mr. Mitchel. The constant use of the word Tammany is intentionally to befog the issue, for it is not the organization but Mr. Hylan who has been elected mayor. Such an attack upon a man, who may possibly give New York the best administration it ever had is unjust and

"The operations of Tammany" (cam-

ouflage for Hylan), says the article, must be watched and the implications of its misgovernment whether through inefficiency or through intention (the tiger changes its stripes no more readily than the leopard its spots) must be made clear to everybody.'

This is prejudging a case with vengeance. Mr. Hylan has not yet been tried, but the verdict is rendered that he will necessarily misgovern either through inefficiency or through intention, and this is written by an avowed spokesman of a self-styled reform administration which has smugly and sanctimoniously wrapped itself around with a garment of all the virtues. It has evidently forgotten the cloak of justice. Possibly having already monopolized all the patriotism and good government, and most of the virtues it wishes to leave this garment to Mr. Hylan. If he arrays himself in this tattered cloak, it is safe to say that even if his administration is less expert it will be much more effective than the holier-than-thou administration of the plutocrats' patriot.

The self-styled reformers of New York and elsewhere would do well to remember they have not a monopoly on all the virtue and wisdom in the world. Others desire reform just as ardently as they do, but they are not ready to force down the throats of society every new fangled Soothing Syrup for Social Sins, before the remedial powers of such syrup are demonstrated. They fear sometimes such nostrums may poison instead of cure, and it does not follow therefore that they are ignorant, and need education, nor that they are hopelessly medieval and conservative, and lamentable obstructionists, Some of those in charity and reform work outside of the superior esoteric ring of the "reformers" may be granted to have at all events the crumbs of wisdom and of virtue that have fallen from their well-stocked table, and if this were remembered better progress towards re-form would be made.

I have said in the beginning that the SURVEY had in the past been unscientific. For the last month or two it has published excellent articles concerning the work of the Y. M. C. A. and the recreational centers in the military camps, but has been dismally silent about the work of the Knights of Columbus in the same field. Is this scientific? The SURVEY carries a professedly complete directory of charitable and social agencies every week, but not a mention of a single Catholic agency. Does the Sur-VEY not know that there are vast numbers of Catholic charitable and social agencies? Is this scientific? I would not insinuate that the SURVEY is prejudiced, but I would like to see more tangible evidence that it is not.

Trusting that you will find space for

this communication in your otherwise useful journal, I remain

Yours respectfully, J. W. R. MAGUIRE. [Professor of Sociology, St. Viator College.]

Bourbonnais, Ill.

[Tammany Hall has an established reputation. It had not occurred to Mr. deSchweinitz, the writer of the article in question, nor to the SURVEY that evidence of that reputation was called for. It makes a substantial shelf in the civic department of most libraries. Perhaps, however, we overestimate the information to be had in Bourbonnais, Ill. Professor Maguire's chief specific criticism is of the Fusion charities policy. He offers his opinion, but no facts. These, it will be remembered, have been given in great detail in the SURVEY, and our readers may be presumed to have both the facts, and the philosophy underlying them, fully in mind.

For a report of the work of the Knights of Columbus, see the SURVEY for December 8, 1917. The Directory of Social Agencies, published weekly, is an advertising department to which Catholic agencies will be gladly welcomed at the regular rates, provided they meet the requirements exacted of others-that they be agencies in the social field doing work on a national basis.-EDITOR.]

TO THE EDITOR: Will your out-of-New York readers be interested to learn that in New York city there are many students of New York city government who diagnose reform's failure and Tammany's success in a way quite different form that in your November 17 issue?

Instead of "Tammany by Default" many of us believe it was Tammany by Fault. It is hard to understand why the many frank post-election criticisms of the Fusion campaign by pre-election backers of Fusion practically refuse to admit that there were serious errors in Fusion administration.

Not because "the idealism of a reform administration was higher than that of the people," as your reviewer states, but because of specific instances like the real estate deals, the West Side improvement plans, brutality and pilfering at the reformatory, the Moree pamphlet, the illegal after-midnight budget increases, the force-down-your-throat Gary plan, inexcusable campaign mispublicity, converting a fact quest into a propaganda fest by the Board of Education, the "perfectly outrageous" use of money, the silence by specific agencies when out-spoken criticism was needed—was the Mitchel administration defeated.

May I record the personal conviction that little benefit can come from New York's experience unless we frankly admit that it was not lack of public appreciation but specific mistakes by Fusion officers and backers which caused the public to vote for efficiency and honesty through another medium than the same Fusion officials.

WILLIAM H. ALLEN. Director Institute for Public Service.] New York.

Hopkins University, succeeding Sir William Osler as professor of medicine.

LAWSON PURDY, widely known as an expert in municipal government and a specialist in taxation, has been chosen general director and secretary of the New York Charity Organization Society, a new position which combines the executive functions tion which combines the executive functions which to exercise by Edward T. Devine a general secretary and by W. Frank Persons at director of the Department of General Work. Mr. Devine and Mr. Persons are both Work. Mr. Devine and Mr. rersons are soon in the Red Cross service for an indefinite period, the former as chief of the Bureau of Refugees and Relief at Paris, and the latter as director-general of civilian relief as Washington. Both retain official relations with the society. Mr. Purdy's appointment, it is announced, does not change the present relations to the society of Lawrence Veiller, director of the Department for the Improvement of Social Conditions, and Porter R. Lee, director of the School of Philamhropy. For the pass eleven years Mr. Purdy has been president of the Tax Board of the city of New York, having been appointed by Mayor McClellan in 1906 and serving through the administrations of Mayor Gaynor and Mayor Mitchel. He was vice-chairman of the Commission on Building Heights and Regulation, commonly known as the zoning commission, commonly known as the zoning commission, whose work has made an impression upon the whole country. He is a former president of the National Municipal League, and for many years was vice-president of the National Tax Association. For some time pass he has been a member of the Charity Organization Society's Tenement House Committee, and recently became its chairman. He is a graduate of Trinity College, '84, and the author of many monographs and articles on taxation.

JOHN E. WILLIAMS, of Streator, III, has been appointed by the secretary of labor, with the approval of the President, as arbimother and the property of the president, as arbimother and the property of the president and are also as a property of the president and are also as a property of the president and are also as a property of the president and the

PROF. ADOLF H. G. WAGNER. a leading German conomist, died in Berlin in November at the age of \$2. His studies in state finance and taxation, especially his harden for the property of the pro

CHICAGO'S appreciation of its Juvenile Court and of the services of the elief probation officer, Joel DuBois Hunter, found fine expression in the farewell tribute to him January 4, as he was leaving to enter upon

his new work as secretary of the California State Board of Charities. Judge Arnold of the Juvenile Court gave great credit to Mr. Hunter for much of the success of the court's as did Judge Pinckney, under whom Mr. Hunter had also served. Other tributes were paid him by Father Melody for the Catholic Church interests, Minnie F. Low for the Jewish Charities, and Jane Addams for the fellowship of social workers, on whose behalf she presented Mr. Hunter with a hand-wrought silver tea set. Mr. Hunter came to Chicago nearly twelve years ago on a fellowship of Auburn Theological Seminary for a summer's work at Chicago Commons. Returning after his graduation for permanent work in this settlement, he remained in residence six years. Following a brief term of service with the Iuvenile Protective Association, he was appointed chief probation officer of the Juvenile Court, after heading the civil service eligible list as the result of a competitive examination of the applicants for this position.

### JOTTINGS

WASHINGTON, D. C., is becoming too busy a city for conventions. The National Society for the Promotion of Industrial Education has changed its annual meeting, February 21-23, to Philadelphia.

THE first issue of the Health News.Bulletin, to be issued monthly by the newly organized State Department of Health of Maine, offers "health service to all," urges the use of is lantern slides, warns against rats as an economic and a sanitary menace, and comments on measles, poor ventilation and overwork as avoidable causes of sickness.

WIN-THE-WAR, announced as the subject of the Southern Sociological Congress at Birmingham, Ala., April 14-17, is to have three main divisions 'of supreme importance to the South': prevention of disease, production and conservation of food, welfare and efficiency of labor.

ANOTHER opium bonfire has been lighted by the Chinese. This fire destroyed 1,016 cases of opium—6,100 ounces—1,614 packages of morphine and over 7,000 instruments for the manufacture and smoking of these drugs. This is the sist holocaust of his reting out hidden supplies in their determination to rid their country of the drug pest.

A "war time course for volunteer social workers," beginning January 15, it amounted by the Mayor's Committee of Wormen on National Defense of New York City, to be given in cooperation with the Department of Estension Teaching of Columbia University, under the supervision of Herbert N. Shenton, instructor in sociology. The committee declares that mure than 500 social workers are needed in New York city.

ONE of the first charities to go by the board in war time is the Bowery Mission bread line in New York city. Not only lack of funds, but lack of applicants conspired to end an institution which has been as vigorously criticized as it has been praised. The superintendent writes that '90 per cent of his former applicants have gone to work able from agg or sikness, are being cared for in the country. From this he argues that

"there can be no question about the fact that the objection which has been raised to bread lines in the past is fully answered."

DETROIT'S Children's Aid Chrismas Carolers Jeet he Suvary for December 22, 1917 proved a great success. Two hundred and filling groups of singers, numbering 4,000 children and their grown-up leaders, sang over a total of 400 miles of streets in and aboun Derroit. The sealed boses which they carried brought in \$3,350 for the Children's Ald Society work among homeless and neg-

THE Federal Council Bulletin, beginning January I as a monthly, is the organ of the Federal Council of the Churches of Christ in America and, as such, will be devoted to inter-church activities and religious cooperative companies. The first number gives details of the joint war-time program of American churches, discusses questions of army and navy chaplaincy, the liquor problem, not provided the control of the country of

FOUR cities in Kansas—Clay Center, Beloi, Minneapolis and Marywille—are engaged in making social surveys. Most of the routine work connected with the survey is the respective cities, and by the class in social surveys of the University of Kansas. They are aided in their work by various extended to the control of the con

THE New World, edited by Walter Fuller, is a "journal of Christian thought and practice," and has for its purpose, as stated in the first issue (January) primarily the discussion of applied Christianity and the "new spiri of courage and adventure which in the tasks and sorrows of the war is despening the religious experience of the nations. The first issue contains an article on the Negro and the War, by Oswald Garrison Villard, a discussion of military training and world pace by John Hayner, Holmes, Sperry, in addition to general news in the subject field of the journal.

THIRTY men and women, including some of the most prominent members of the Jewish colony, were executed by the Turkish army in Jerusalem before that city was surrendered to General Allenby on December 10. All of the Judean colonies are now under British protection; but only 12,000 escaped the northward drive of the Jewish population when the Turkish army retreated through Galilee. The Provisional Affairs has undertaken to raise a fund of at least \$30,000 monthly for the relief of those left behind who are in dire distress. Alice L. Seligsberg, chairman of the Hadassah (44 East 23 street, New Yurk city) is appealing for physicians and nurses to join the Zionist medical unit for Palestine which is to sail shortly.

POLITICAL appointments seem to be going to women in New York state with increasing frequency since the recent retension of the franchise. The Survey has afteredy noted the appointment of Eleanor W. Higley to the State Board of Charities. Governor Whitman has also named Mrs. John Francis Yawger a member of the State Probation

Commission. Two mayors have named women as city commissioners of charlities, Phoebe H. Valentine being appointed in Schenettady and Sarah McCleary in Amsterdam. Both women were formerly children's agents of the State Charlifes. All Association. Mayor Hylan went no further it such appointments than naming for the such appointments than naming for the such appointments than naming for the such appointment than animig for the such appointment than animig for the such appointment of women—two in a board of secun-tree unired by the first of secundary and the such appointment of women—two in a board of secun-tree.

THE PLANT, records and entire establishment of the Eugenies Record Office at Cold Spring Harbor, Long Island, N. Y., has been given by Mrs. E. H. Harriman to the Carnegie Institution at Washington. The gift includes eighty acres of land and a grid in the condition of Office, established in 1910, has conducted investigations that have attracted the attention of biologists, political economists and medical men in all parts of the world. Along these has been been conditioned for prisoners, the condition of the con

### THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

### SURVEY

ASSOCIATES INC.

#### KRY

If you know the name of the agency or organization, turn direct to the list-ings (3d column) for address, corre-sponding officer, etc. [They are ar-ranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject classifications, as "HEALTH," printed in capitals.)

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your community or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall en-deavor to get your inquiry into the right hands.

#### WARTIME SERVICE

"HOW the Survey can serve" hwas the subject of an infor-mal conference held early in April, in mat conference acia early in agree, in our library, to which we asked the executives of perhaps twenty national social service organizations. The con-ference was a unit in feeling that as a link between organized efforts, as a linh between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the SUNVEY was at the threshold of an opportunity for service such as hestidam come to an educational entersidam come to an educational entersidam come to an educational entersidam.

The development of this directory is one of several steps in carrying ont this commission. The executives of these organizations will answer ques-tions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands.

Listings \$3 s month for card of five lines (in-cluding one listing in SUBJECT INDEX by full name and three by initials), fifty cents a month for each additional line. No contracts for less than three months. Additional charge of \$1 for each change of copy during three-month period.

Scientific study coupled with practical manufacturing methods—this is the basis of the MAZDA Service that helps lampmakers produce better lamps.

" Not the name of a thing, but the mark of a service

### -The Meaning of MAZDA-

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the comnanies entitled to receive this Service. MAZDA Service

is centered in the Research Laboratories of the General Electric Company at Schenectady. The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

RESEARCH LABORATORIES OF

GENERAL ELECTRIC COMPANY

The

### Nation-wide Life Insurar

Out of a population of 100,000,000 less than 20,000,000 carry life insurance. That is largely because many people live remote districts not visited by life-insurance agents, and these people were never reached until the method of doing business direct-by-mail was begun by the

### Postal Life Insurance Company

The Postal now makes the taking of a policy almost as practicable and easy for a man living in the Yukon district as in a suburb of New York, and this is so because Uncle Sam's splendid postal service carries the insurance proposel to the man, carrie his answer back, and arranges all details quickly, directly and at triffing cost. And so it comes that

Policies are issued everywhere and policy-claims paid promptly by the Postal's Direct Method

For example, policies have been written, death-claims paid and letters of sincere thanks for promptness received from city people but also from dwellers in such small towns as Crown King, Arizona; Shelley, Idaho; Pollock, S. Dakota; Aragon, New Mexico, and Schurz, Nevada, while a single advertisement published in the Literary Digest brought replies from country towns of which many of us may never have heard, as Linlithgo, N. Y.; Tehuacana, Texas; Lattimer Mines, Pa.; Rising Sun, Md.; Soperton, Wisconsin; Kayford, W. Va.; and Kitchener, Canada.

Forty per cent of the Postal policyholders had no insurance when they took out their policies.

From coast to coast, people in all walks of life, from the millionaire to the man of moderate means, arrange protection in the Postal Life and enjoy its benefits. For example, on the same day that the Managing Director of a large cement company in far-away Calgary took out a Postal Life Policy for \$50,000, a clerk in Bangor, Maine, took out one for \$1,000. On the same day that a check for \$100,000 was sent to pay a death-claim to the estate of a wealthy manufacturer of North Adams, Mass., killed in an automobile accident, another check for \$1,000 was sent to pay a claim on the life of a bookkeeper in Indianapolis, Ind.

Thus people, far and near, avail themselves of Postal advantages, through which they are able to receive sound insurance-protection at low net cost with prompt settlement of policy claims. It is indeed the Company of safety, saving and service.

### Find Out What You Can Save

### Strong Postal Points

FIRST: Standard Policy reserves. Resources \$9,000,000. Insurance in force, \$40,000.000

SECOND: Old-line legal reserve insurance - not fraternal or assessment. THIRD: Standard policy protessions, approved by the New York State In-surance Department.

FOURTH: operates under strict New York State requirements and subject to the United States Postal Authorities.

FIFTH: High medical standards in the selection of risks.

SIXTH: Policyholders'
Health Bureau provides
one free medical examination each year, if desired.

To get full official information with rates for your age on any standard form of policy simply write and say:

"Mail insurance particulars as mentioned in The Survey for Jan. 19," and in your letter he sure to give:

1. Your full name 3. Your occupation 3. The exact date of your

The request for informs tion places you under no ob-ligation and no agent will be sent to visit you. The ploy agents; the resultant commission-savings go to you because you deal direct.

### POSTAL LIFE INSURANCE CO.

WM. R. MALONE, President.

511 Fifth Ave., cor. 43d Street, NEW YORK CITY

### IOTTINGS

THE Susan B. Anthony woman suffrage amendment to the federal constitution has passed the House and is now before the Senate

MORE than three hundred Japanese women are practicing medicine in their own country. Of thirty-nine candidates at a recent medical examination in Tokio twenty-five were women.

THE Court of Appeals of New York has declared constitutional the section of the penal control information or devices.

UNDER the war measures act, the Canadian government has decided to prohibit imme-diately the importation of all intoxicating (containing more than 21/2 per cent alcohol) and its transportation into any part alcohol) and its transportation into any part of Canada, where the sale is illegal from April 1, 1918. Manufacture of liquor will be prohibited after a date to be determined by investigation and consideration of the conditions of the industry. All these provisions will be in force during the war and for twelve months after the conclusion of peace. The order has been received with wide approval, although the revenue loss to the dominion will be about twelve million dollars a year.

INJURIES to the eye at Halifax are apparently even worse than early reports indi-cated [the Survey for December 15, 29, 1917; January 12, 1918]. Edward M. Van Cleve, of the New York Institute for the Training of the Blind, who went to Halifax with Olin H. Burritt, of the Overbrook School for the Blind, Pennsylvania, and E. E. Allen, of Perkins Institute, Massachusetts, as a Red Cross committee, telegraphs that large num-bers of children especially have eye injuries. The Halifax school for the blind accommo-dates only about one hundred and the medieal experts present are overworked. The National Committee for the Prevention of Blindness is raising a special fund of \$20,000 to provide shelter and treatment.

HENRY C. WRIGHT, who ceased to be first deputy in the Department of Public Charities in New York city with the outgoing of the fusion administration December 31, has been appointed secretary pro tem of the New York State Charities Aid Association to fill the place of Homer Folks, absent in France as director of the Department of Civil Affairs of the American Red Cross. Mr. Wright is a student as well as administrator in the field of public institutions. Before becoming first deputy he was employed fore becoming first deputy he was employed by the Board of Estimate and Apportionment of New York city as director or its combetally control of the Board of the Month of the Board of the Rose of the Board of the Rose of the Board of the Rose of the Board of the Boa a report on the results of the different methods of fiscal control of state institutions used in the various states. Still earlier he had served as secretary of the City Club of New York city and before that had been in charge of the Citizens' Municipal Party in Cin-cinnati, which helped to retire "Boss" Cox. As first deputy commissioner, Mr. Wright had general charge of the public institutions of the city.

### Mothered by the City

An Appraisal of the Child-Placing Work of the New York Children's Home Bureau

By Winthrop D. Lane

T FIRST thought the reader may inquire why pains should be taken at this time to describe what is, after all, only another demonstration in a well established branch of child care. Putting young children into real homes, where they can enjoy the freedom and intimacy of family life and can grow up not only strong and healthy but with the confidence born of becoming acquainted with the world in normal ways, is no new thing. Formerly, indeed, those who needed the intervention of the state were scantily cared for. For the most part they were bundled off to county poorhouses, there to live in the midst of dirt and disease and to be looked upon as nuisances or treated as drudges by the adults who lived with them. Then came the orphanage and the "asylum," in which, to be sure, they were segregated from the sick and decrepit, but where they still languished for want of proper recreation and individual attention. Following the orphanage came the modern, intelligent, carefully run institution for children, where everything is done that can be done to make congregate living fruitful and attractive.

The family home is an improvement on the institution. "The carefully selected foster home," declared the White House Conference on the Care of Dependent Children in 1909, "is, for the normal child, the best substitute for the natural home." The first experiment in placing children in homes was made by the New York Children's Aid Society in 1853. Today children are placed in such homes in nearly every state in the union. Private agencies solone do the work in some states, in some public agencies exist, and in others public wards are placed through private hands. Massachusetts, Pennsylvania, Maryland, Illinois and New York have perhaps developed the method farthest. Eight years ago a careful estimate placed the number of children cared for in foster homes throughout the country at at least 60,000, and it has since

The Children's Home Bureau of the Department of Public Charities of New York city is, therefore, merely following a well established lead. It began a year and a half ago under circumstances far from auspicious. Opposition was ready to attack and to predict speedy failure. The city was committing over 6,000 children to private child-caring institutions each year, while its total annual bill for the support of all children in institutions, which, including a few delinquents, numbered 23,000, was more than five and a half million dollars. To propose to commit young people of specified ages to homes instead of to institutions, therefore, was to run the risk of offending those who believed in traditional methods. John A. Kingsbury, commissioner of public charities, had already had more than one tilt with believers in institutions, and it remained to be seen how far the new plan might suffer from these old grudges and differences of onition.

A crust of officialism and inertia, also, overlay much of the department's work. Mr. Kiugsbury had pierced this at a number of points. Was the crust still strong enough to hamper and negative this effort in a new direction? Would the imagination and force needed for success be forthcoming at the proper time? Would private agencies and individuals lend their aid? More important still, could homes of the right sort be secured in sufficient numbers? To be sure. private organizations had for years successfully placed children in foster homes within the metropolitan area, but New York city presents strange difficulties in the bringing-up of children and private agencies have a way of succeeding where public ones sometimes fail. Nor was there any precedent in this country of a city larger than Boston, one-seventh the size of New York, finding homes for children directly by its own agents.

There are other reasons for describing the work of the bureau now. One is that the standards of child-placing agencies vary in different communities and different degrees of success have been attained. To make the experience of the latest demonstration available is, therefore, to allow comparisons and to further the practice and technique of the

Finally, the bureau is threatened with extinction. New York city has recently undergone a change of administration and almost every day brings fresh evidence that the new commissioner of public charities. Bird S. Coler, is hostile to much of the progressive work begun by those before him. The dismantling process has already started.1 If a statement of the aims and achievements of the bureau at this time can arrest the hand of destruction, a service will be performed not only for hundreds of dependent children now in the city's care, but for thousands wet to come.

The bureau was established June 15, 1916. Its general direction was placed in the hands of William I. Doherty. second deputy of the Department of Public Charities, who had had previous experience in child-placing as secretary of the Catholic Home Bureau of New York city and who had been Commissioner Kingsbury's chief adviser in regard to institutional standards and care. The executive placed in immediate charge was John Daniels, a man of broad experience in social work in New York city and elsewhere. Until such time as the city might be convinced of the value of the work, private funds were contributed to defray administrative expenses. This fortunate event occurred more quickly than was expected and the bureau was fully taken over by the Board of Estimate and Apportionment on July 3, 1917.

Only children between two and seven years of age have, for the most part, been boarded out by it. Although it had hoped to begin placing children immediately, the epidemic of infantile paralysis rendered this unwise, and the first child was placed October 16, 1916. This postponement gave opportunity not only to round out the working organization and to provide 'advance instruction for the workers, but also to obtain an initial supply of foster homes.

In the fifteen months since the first child was placed the bureau has fully demonstrated that satisfactory foster homes can be obtained and that children can be boarded out and supervised in larger numbers than even the most sanguine expected. A thousand children was set as the goal for the first year. Homes were actually found for 1,113. By December 12 the number had risen to 1,234.

The bureau has also proved that children can uniformly be placed in homes of the same religious faith as their parents. Catholic and Protestant homes have been found in abundance, lewish homes in large numbers. For every Catholic home used, a letter from the parish priest has vouched for the family's church standing. In a pastoral letter dated February 7, 1917, Cardinal Farley declared that "we have no objection to this new method of solving the problem of the dependent child. We recognize and have maintained that the home has many advantages which the institution cannot supply."

Let us now accompany a child through the processes of the bureau from the moment when application is made for commitment to the final finding of a home. This is the best way to gain a picture of its methods, possibilities and safeguards. Mr. Daniels has told the story in print and his account, condensed at points and enlarged at other points here, will serve the purpose:2

minneus had been received and investigated by the coordinate Bureau of Social Investigations, part of the Department of Public Charities

On a morning shortly after the bureau was ready to receive children a father entered with three little sons. These were Salvatore, James and John, aged six, four, and three, respectively. had heard of the children before, for the application of their com-

The facts in regard to the father and his family were these: The father, Natale, had come to New York city from Italy sixteen years After opening a little second-hand shop he had written to his sweetheart across the ocean to join him. They were married and went to live in two rooms over the shop. The father was sound physically and mentally, temperate, of clean record, and the mother's history likewise showed nothing to her discredit. They brought nine children into the world, of whom three died and six survived. parently the bearing and an empted rearing of these children, in addition to helping the father attend shop, had undermined the mother's vitality. For some time she had been sick, suffering from an abscess on the left side. At length she became so weak that she was unable to continue her care of the children. The father had already run \$100 into debt for doctors' bills and special diet and had reached the end of his rope. Thus it was, after fifteen years of self-support, that they were forced to appeal to their adopted city to come to their aid.

The oldest child, Rose, being of an age to help about the house, as taken in by neighbors. The youngest two, babies, were comitted to an institution for infants. The other three were Salvatore, was taken in by neighbors. mitted to an institution for infants. James and John. In applying for their commitment, the father had said that he would pay what he could—about \$2 a week—toward their support. He planned to send his wife to a hospital and hoped that before long she would be cured and the family could be reunited.

Upon being assured that the children would be placed together in as good a liome as the bureau could find and that he would allowed to go to see them, the father left. Then came the physical examination in the bureau's clinic. This clinic is in charge of two physicians and a graduate nurse and attendant; the physicians alternate morning and afternoon and the clinic is in operation daily from nine to five. It is the gateway through which every child must pass. Not only are children examined here before they are boarded out, but every three months while they are in the bureau's care they are brought back for re-examination. Approximately five-sixths of the children are found to have fairly serious defects.

Salvatore was in a very poor state of nutrition. He needed, also, an operation for the removal of adenoids and tonsils. In addition, his nervous system was somewhat disordered. James was fairly well nourished but needed the same operations. John, the youngest, well nourished, but needed the same operations. John, the youngest, showed no defects requiring attention. These observations were carefully noted on the elinic record sheet, not only for immediate use, but for guidance in future re-examinations. The time of the clinic in fully occupied by these examinations, re-examinations and filling a few simple prescriptions, so that nearly all actual treatment is given elsewhere, by hospitals, dispensaries, private physicians and a staff of some fifty cooperating physicians selected in various parts of the city who contribute a limited amount of service without charge. The operations upon Salvatore and James, however, had to be postponed because the father refused to give his consent, having the usual dread of hospitals of men of his education. Some months later the father consented and the operations were performed.

consented and the operations were piderormed.

From the medical clinic is helden passed to the dental clinic in the next room. This, also, has unlow dentists in attendance and through it children must pass. Unlike the medical clinic, it gives its own treatment on the spot. When more work is required than can be done at a single stitup, the children are brought when the contract of the third of the contract of t

The next step was to take the children across the hall to the bureau's storeroom, where they were measured for such new clothing as they needed. Salvatore, James and John were better off than are most of the children who come to the bureau, for their suits, and hats were quite presentable. However, they were supplied with a number of other things which the storeroom makes it a practice to provide, namely, shoes, overcoats, sweaters, shirts, underclothing and various accessories such as combs, toothbrushes and wash-cloths. Parents are requested to bring children to the bureau eleanly bathed and with such clothing as they possess, but some of those who arrive are so dirty that they have to be scrubbed at once, and marry need complete outfits of clothing.

This anended to, the three children were taken to a temporary or transient home, within convenient reach of the bureau's office, where they could stay for a few days pending the selection of a permanent home from those on the bureau's list. The use of these transient homes has since been discontinued and the bureau has established its Temporary Shelter in their place. To this, children awaiting permanent location are sent. Progress through the shelter is rapid, for the

but not under Mr. Daniels's direction. This bureau investigates all applications and turns the facts over to the children's bureau. It is a social service as well as an investigative agency and tries to keep the children in their own homes if possible. Sometimes it finds that the families are not destitute and do not need to shift the support of their children; sometimes it enlists the aid of private charitable organizations. Only when commitment is necessary, both for the good of the children and of the parents, does it recommend that the children be boarded out. Also, dependency must be the reason, for the bureau does not receive delinquent children committed through the courts.

For further statement of this process see page 451.
The three children whose story is here told came to the bureau before some of its departments were in operation, notably the denial clinic, and so could not receive full attention in just the ways that this is now given. The writer has personally studied the activities of the bureau and has drawn upon his not receive full attention in just the ways that this is now giv has personally studied the activities of the bureau and has own observations in this as well as in other parts of the article

bureau has a large list of approved homes and children do not have to wait long before being placed. Sometimes they are sent to their new homes immediately after the storecome has fitted them out. The shelter contains aix rooms and has accommodations for sixteen children to the store the storecome of the storec

The selection of a permanent bome was the next step. This is the most important decision the bureau has to make. An unwise choice is sure to store up trouble for the future, a wise choice is two thirds of a child's happiness. The home of Mr. and Mrs. P., at Richmond Bill, Long Island, seemed to be just the place. These were a sisten, and John, fourteen. Mr. F. was a boss carpenter, the family income being about \$25 a week. The couple owned their house, which constained ten rooms and was modern and comfortably arranged. It had a sizable yard as well, and was in a quiet suburban meighborhood with school and church nearby. Two rooms and three houses with the couple of the surface of the couple of

Mrs. F., upon hearing a description of the three boys, consented to take them. This, however, only began the bureau's work. Every two weeks since then the family has been visited by an agent, for only by such careful supervision, carried out by a different corps of competent field workers from those who find homes, can the bureau be sure that foster parents are living up to their best. Moreover, the visitor is usually able to aid the foster parents in solving the little human problems that come up in the adjustment between family and children. For instance, Salvatore and his brothers were used to cramped quarters; in winter they made up for lack of bed clothing by sleeping three in a bed. When they were put in Mrs. F.'s separate cots, therefore, they howled, and continued to howl until more moderate stages of adapting them to the new regime were consented to. Also, they had been used to Italian cooking, and Mrs. F. soon decided to meet their protests half way with frequent repasts of macaroni and spaghetti. Meanwhile, table manners and vocabulary came in for their share of attention and yielded to patient modification.

Mrs. F. entered Salvatore and James in the kindergarten. When the visitor called one day she was playing ball with them in the yard. Later, the foster mother reported that all three had developed a sense of order that enabled them to control the anties and location of such elusive articles as button-hooks and toolbhrustive articles as

The father soon called to see his children and was given a cordial welcome. He has since made visits almost every Sunday. Last April the mother dird and the father's hope of any early retuine of his family was dashed to early. Until two months ago he had no definite plans for the desure, bought sufficient being regulation and the plans of the control of the contro

This is a typical story of the bureau's boarding out of children. Wherever possible, it tries to return the foster child to its real parents. The bureau is thus engaged in temporary, not permanent, placements. Parents are re-investigated periodically by the Bureau of Social Investigations, and such help as carn be given to enable them to take their children back is afforded, usually by enlisting the help of private charitable societies. Of the 1,234 children boarded out up to December 12, 423 have so far been returned. Eventually 85 per cent, it is estimated, will be restored. The intention to restore them is made clear to foster parents at the outset, so that there may be no heartburnings later on. Even if permanent adoption were aimed at it would be difficult, since only twelve of the 1,234 children have yet been found to be free from relatives' claims and therefore eligible for adoption.

To the foster parents the city now pays \$3,50 a week for the

support of each child. For infants (i. e. children under two years, of whom the bureau has recently placed a few, mostly members of family groups), the payment is \$.65 a day. Prior to January I these figures were \$3 and \$.55. This is not regarded as enough to make the commercial motive on the part of the foster parents strong, and indeed some of them have spent more than the city gave. Nevertheless, the bureau is not blind to the fact that the commercial motive may exist and it attempts to weed out all families in which it is dominant. In most of its homes, it believes there is a mingling of the desire for the city's mouthly check and a true interest in children. If this balance of reasons keeps the affection of the foster parents from replacing that of the real parents, the bureau is satisfied enough, for it does not want the children to be alienated from their natural home.

Who are the foster parents to whom the city entrusts its hundreds of wards? How does it find them? What means does it take to protect the child from going into an ill-kept or unkind home? Does it accept the generosity of the first man or woman who offers to receive a child? Does it place its children without heed to the location and surroundings of the home, to the size of the family or its income, to the age, education and standards of the parents, or to their affection for children? Has it an ideal home in mind, and what is its success in finding that ideal in the great conglomeration of families that make up New York city and environs?

The bureau tries, for most children, to find a bome consisting of the normal elements of father, mother and children. It wants its children to have as close an approximation to real family life as possible. It prefers that the children already in the home be as near the same age of the foster child as possible. The latter, it believes, should be fully accepted into the new family, should share in the pleasures and sorrows of the other children and take part in the various little home tasks that go to make up part of the training of all young people.

It looks for a father who is not only temperate and steady but who understands children and has the patience to deal with them Justly. It looks for a mother who is physically strong and intelligent, who has a kindly disposition, an instinct of motherliness and that even balance of temper that will enable her to treat her foster child with the same impartiality as her own. The children should be vigorous and normal in every way and should be taught to regard the foster child as one of themselves.

For a particular child, or for a family of children, the home of a childless couple may nevertheless be best. In the latter case, the children will themselves supply the needed companionship. For delicate children, or for a child with a nervous disorder, the home of a single woman is often best, one who lives quietly by herself or with one or two adults.

Whatever the type of home, certain minimum requirements have been set up. The income must, of course, be above the poverty line. Each member of the family should be recommended by reliable references, at least two of whom are not simple, but there should be plenty of light and air; windows and doors should be screened, sanitary conditions good and the draining and plumbing must be inspected and found satisfactory. No home is accepted without a permit from the local board of health. The food must be simple and well cooked and the milk supply safe. Good reading material in the home is regarded as desirable. The neighborhood must not be overcrowded and three should be play space, either in yard, playground, or nearby park. Foster parents are expected to send the city's children to school as they would their own. For this

reason homes are regarded as preferable that are close to good schools, and the foster mother is expected to send reports of the child's progress to the bureau's office.

Male lodgers or boarders are objectionable. Even members of different families in one home, though related, are regarded as undesirable, since they often cause friction in daily living. An objectionable occupation, such as that of bar-tender, is another reason for rejecting a home. So, also, is the presence of a pronounced invalid or mental defective.

Five or six members of the bureau's field staff are usually engaged full time in trying to find such homes as these. They make inquiries in desirable neighborhoods, consult agencies that might be expected to know of such homes, and investigate applications that come to the bureau unsolicited. The recommendations of homes already approved are found to be the most fruitful source of new homes. How carefully the visitors do their work is partly indicated by the ratio of acceptances to rejections. In the eighteen months ending December 12 the bureau had received 4,254 applications to receive children and had approved only 453 of these. More than 2,100 had been definitely rejected, ten were being used provisionally, and the remainder were awaiting investigation. Thus for every home approved, nearly five were rejected. Moreover, ninety-two had had their approval withdrawn, because conditions were found to have changed or there was no longer any room for foster children.

The bureau has managed to keep a substantial supply of homes in advance. On December 12 there were approved surplus accommodations on its lists for 112 Protestant children, 109 Catholic and 16 Hebrew. Protestant homes are the easiest to find, Hebrew the most difficult. The reason for this is that the Jewish people live in congested sections of the city, for the most part, and those who live in outlying districts are likely to have large families of their own. Moreover, Jews are, as a rule, less eager than others to take in strangers. Of the 1,234 children boarded out 887 were Catholic, 221 Protestant and 126 Hebrew.

Where are the homes located? For the most part, they lie in the open and outlying portions of Brooklyn and Long Island, on Staten Island and in the Bronx and Westchester county. The area covered is that within a radius of from twenty-five to fifty miles of the bureau's offices. Manhattan Island is little used unless there is a special reason for putting children there, such as proximity to a clinic. A recent classification of 419 homes in use showed that forty-four were in more or less congested areas, 226 in "suburbs," and the remainder either in rural districts or in the open portions of cities or on their outskirts.

Most of the homes, again, are detaclied single houses. One hundred of the 419 were apartments, 242 detaclied louses, 45 individual houses of rows, 4 semi-detaclied and 28 not specified. Private baths existed in 326 of the homes, and the toilet arrangements were as follows: private, 338; shared, 37; outside, 44.

The average number of children placed in a single home is, roughly, two. Four is the maximum regarded as desirable. Larger family groups are an exception to this, however, since it is deemed best to keep brothers and sisters together. Occasionally, toster mothers are found who are willing to take as many as six children at once, and who are able to provide astifactory accommodations and care. Classified on the basis of the number of children in each home, the homes in use on a given date recently showed that 106 had one child each, 107 two, 45 three, 29 four, 8 five and 4 six.

The economic status of the foster parents varies widely. For the most part, the fathers are skilled workmen, clerks, salesmen and men in business for themselves. About two families in every five own their own homes. The rents paid by the others vary from 127 which pay less than \$20 to 22 which pay more than \$30. The incomes of 419 families are shown in the following table:

\$1	10	\$4.		٠.													٠.	 ,				 				 				:

Seventeen of these families have weekly incomes of \$10 or less. How such families can be said to be above the poverty line is not clear until one learns that, with a single exception, they are all unmarried women or widows, and either have no dependents of their own or, at most, one child who is not working. Five of them own their own homes. The exception referred to is a married couple with no children who have, indeed, ceased to take children from the bureau. Of the two families in the \$1 to \$4 group, one is a widow with an income of \$3 a week who owns a seven-room house and has a small amount of savings in the bank, and the other is a widow with an income of \$4 a week who owns a fourteen-room house; each of these receives occasional assistance from relatives each of these receives occasional assistance from relatives.

The personality of the foster parents cannot be as readily arrived at. This, together with their educational and cultural background, is appraised by the bureau's visitors and the facts are on record, but it is the sight of the parents in their homes that is the surest guide to their competence. The recommendations of those who know them and the sanction of priest, minister or rabbi are further safeguards. Two hundred and fifty-seven of the foster mothers were horn in the United States, 51 in Ireland, 23 each in Italy, Germany and Russia and the remainder in other countries.

The health of children in their foster homes is, of course, a crucial test of the success of planing out work. By its quarterly reexaminations of children in its own clinic, the bureau is able to note both their growth in stature and weight and their genetal improvement in health. In this way it can trace the effect of the life they are leading and determine whether enough and proper food is being given them and other physical wants are being met. It is just this kind of careful observation that has been a weak point in much child-placing work.

In October, 1917, 217 children who had been examined three months previously were re-examined. The clinic records of eleven of these were in use in the field at the time this paper was written, leaving 206 available for tabulation. Of these, 26 children had lost tweight, 14 weighed the same as when previously examined, and 166 had gained. The gains ranged from one-quarter of a pound to ten pounds, the majority of the children gaining two, three, four or five pounds each. Losses in weight were in many instances counter-balanced by increases in height.

In regard to height, none showed a decrease but a somewhat

larger number, 75, showed no gain. Meanwhile, 174 of the 206 were reported as "improved" in their general condition, twenty-two as "poorer." These diagnoss enabled the bureau's physicians, nurses and visitors to call the attention of the foster parents to the needs of particular children and to see that these needs were met.

Serious illness has apparently not been one of the bureau's chief worries. Only five of the 1,234 children placed up to December 12 have died and only twenty-three have been seriously ill. The term "serious illness" is applied to those reported in a critical condition by the hospital in which the child is or by the physician attending it in the home. It includes such contagious diseases as scarlet fever and diphtheria, but not always meals or chicken-nox.

In its supervisory visits the bureau has set a higher standard than many child-placing agencies elsewhere. Comparisons on this point are apt to be misleading, however, because of the differing ages of children boarded out. One of the most successful agencies in the country requires a visit every three months, except to infants under the care of visiting nurses, when supervision is more frequent. Another society makes its first visit in from two weeks to thirty days, its second in from thirty to ninety days, its third in about three months, and thereafter at intervals of four, five and even six months; this society, however, keeps children until they are twenty-one, and visits to the older children are permitted to be less frequent. A middle-western agency requires three visits during the year, a Maryland agency one a week to city homes and one a mouth to county homes.

The Children's Home Bureau has maintained an average of one visit every three weeks to each home in use. Ten visitors give all of their time to this work. Each visitor now has between sixty and ninety-five children under her care, and between twenty-seven and fifty-four homes. These figures vary with the districts, the closeness of the homes to each other and the convenience of transportation. One of the most successful child-placing agencies in the country, the Children's Aid Society of Pennsylvania, employs automobiles and skilled drivers to take its visitors to houses. This would be particularly valuable in New York city, where the geographical distribution of homes is wide and the means of conveyance often crowded and roundabout.

Such are some of the outstanding facts of the bureau's work. Once more it has been demonstrated that it is both feasible and advantageous to put dependent children, temporarily in need of a change of home, into normal families in the community. The real parents of the children apparently think very well of the treatment given. Recently the bureau began to ask for frank statements of opinion from all parents whose children were restored to them. Of sixty replies received, fifty-four have contained nothing but commendation. The other six expressed greater or less dissatisfaction, several proving to be due to misunderstandings rather than to actual shortcomings. Some of the replies of the parents show the nature of their satisfaction. "My children were fat and had a good color." wrote one father. A mother found delight in the fact that her children had learned to "love flowers and birds" while in their foster home and a third was glad that her little girl's teeth had been filled and that toothaches no longer disturbed the family's quiet. A Hungarian parent wrote: "It vose in wery good halts and strong wathe never bi fore. And I thanke you wery mach fore it." Still another parent found that her children had improved "in manner and politeness" and one discerning mother commented on the "strong education" her fivevear-old son displayed on his return.

This is the work that is threatened with discontinuance. It bears the approval of practically all who have become acquainted with it; it is in the direct line of progress in child care. Will those who have set the standards of child care in this country cermit it to be snuffed out.

### Labor in World Politics

By John A. Fitch

OF THE SURVEY STAFF

E have had, within the last few weeks, an unparalleled example of the influence of the common people, not only over the governments of their, own countries, but over other governments as well. An ewe power in world diplomacy has arisen.

It was nothing less than the demand of groups of people with doubtful official standing or with none whatever, that led to the recent re-statement of war aims by the leading statesman of Great Britain and the United States—Lloyd George and Woodrow Wilson. Both were unexpected: President Wilson's the more so because only a month had clapsed since his address at the opening of the new session of Congress, in which he had discussed very fully the aims of the United States in the war. Both were occasioned by movements of an unusual character, having their origin in the desires and aspirations of the common people.

The people of Russia are not agreed among themselves, and whatever claims may be made for the Bolsheviki it is apparently indisputable that they are a minority party. But the Bolsheviki represent whatever government there is in Russia, and they are negotiating for terms of peace with the Germans. This was undoubtedly a fact of primary importance behind the decision of the Premier and the President to speak for their governments. With unmistakable clearness President Wilson addressed himself to the Russian nation, whose spokesmen are proletarians, and if his message was to the people of Russia rather than to their "present leaders," all the clearer does it become that his words were evoked by the necessities and the plight of a people, in the mass.

"There is, moreover," says the President, "a voice calling for these definitions of principle and of purpose which is, it seems to me, more thrilling and more compelling than any of the many moving voices with which the troubled air of the world is filled. It is the voice of the Russian people. They are prastrate and all but helpless, it would seem, before the grim power of Germany, which has hitherto known no releating and no pity. Their power, apparently, is shattered. And yet their soul is not subservient. They will not yield either in principle or in action. Their conviction of what is right, of what it is humane and honorable for them to acceet, has been

stated with a frankness, a largeness of view, a generosity of spirit, and a universal human sympathy which must challenge the admiration of every friend of mankind, and they have refused to compound their ideals or desert others that they themselves may be safe. They call to us to say what it is that we desire, in what, if in anything, our purpose and our spirit differ from theirs, and I believe that the people of the United States would wish me to respond with utter simplicity and frankness."

Lloyd George's speech was not so clearly addressed to the Russians; but does anyone doubt that prominently in the mind of either statesman, as he spoke, was the thought of that people and their future?

Great as was the necessity for reassuring the people of Russia, there were other millions nearer home, and not of the ruling class, who also needed reassuring. It was significant indeed that Lloyd George spoke before a trade union conference. There have been growing signs of uneasiness in the British labor movement. The lack of a clear statement of the purposes of the government in the war has caused misgivings. Arthur Henderson, leader of the Labour Party and former cabinet member, in a recent issue of the London National Weekly, called for a clear statement from the government on the subject of economic warfare. The British people, he said, entered the war "in the role of champion of the sanctity of international treaties and of the rights of small nations" and not for economic advantage, and now was it to be diverted into a movement to crush Germany politically and economically? Such a warfare could mean only exploitation to the wage earners of either country. "If this policy of economic repression is persisted in," he warned, "it may prove to be the rock on which the unity of the nation will be broken.

Then, on December 28, came the manifesto of the British labor movement on terms of peace. Their rulers had not spoken, so they came forward themselves with a statement of the terms for the achievement of which they were willing to fight on. It is a document that will not soon lose its grip on the memory or the conscience of the allied nations. It calls, first of all, for a league of nations, with an international legislature where all international questions would be settled by law, and which would pledge the strength of the nations entering the league to prevent future wars. It calls for the re-establishment of invaded and despoiled areas, not only by compensation for destroyed public buildings and "capitalist undertakings" but by "setting up the wage-carners and peasants themselves in homes and employments." It declares that the British labor movement is "against all the projects now being prepared . . . for an economic war after peace has been secured," and calls for the "open door" through the limitation of customs duties in all countries to the necessities of raising revenue.

The American labor movement has never stated so fully the objects for which it considers it worth while to fight, but it has gone far enough to show the similarity between its views and those of the British labor men. In the declaration of terms which the American Federation of Labor felt should be "the basis on which peace must be negotiated," adopted at the recent Buffalo convention (see the SURVEY, December 1, 1917, page 234), there appeared distinctly the demand for a league of nations to enforce peace, recognition of the principle of the

"consent of the governed" and "no political or economic restrictions meant to benefit some nations and to cripple or embarrass others."

In a striking way President Wilson's address meets the demands of the British labor men.

"The British labor movement," reads its manifesto, "relies very largely upon the complete democratization of all counrities; on the frank abandomnent of every form of imperialism, on the suppression of secret diplomacy and on the placing of foreign policy, just as much as home policy, under the control of popularly elected legislatures."

The first article in President Wilson's program of peace reads as follows: "Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind, but diplomacy shall always proceed

frankly and in the public view."

"The British labor movement," said its spokesmen, "urges upon the labour parties of all countries the importance of insisting . . . on the principle of the open door, on customs duties being limited strictly to revenue purposes and on there being no discrimination against foreign countries."

President Wilson's third article is this: "The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance."

With respect to the occupied territories, with respect to Alsace-Lorraine, and in many other particulars the President's address parallels the British labor statement,

Whatever of labor's program Lloyd George may have overlooked in his address, President Wilson brought out with a clearness that admits of no misunderstanding. Each stated the war aims of his country in his own way and neither of them accepted the labor planks in their entirety; but together the two statesmen have laid down a set of principles that have met her rising tide of labor unrest and allayed it. The expressions of opinion that have come from labor sources indicate satisfaction, a hearty willingness to cooperate.

The significant thing, the thing of utmost importance in all this, is the manner in which the harmony so greatly desired has been accomplished. Nor by suppression of free speech, nor by the jailing of agitators has it been achieved, but by the acceptance by the governments of labor's program. This does not signify that the responsible officers of government in Great Britain and the United States have ever had any other aims than those just expressed, but it took a strong popular demand to bring them clearly into the open.

The inevitable rise into power of the common people as the war progresses has been frequently noted. It has been freely predicted by men of such widely differing viewpoints as Norman Hapgood and the editor of the New York Eerning Post that after the war the influence to be wielded upon affairs of state by masses of the people heretofore inarticulate will be very great. Winston Churchill has made the statement, not as a matter of prophecy but of fact, that a chief result of this war will be to free the workingmen; as the chief result of the wars of a century ago was to free the shopkeepers.

The occasion for the recent war program statements as well as their content afford a reasonable basis for further and strengthened faith in the triumphant progress of democracy.

### Book Reviews

THE WORKS MANAGER TODAY By Sidney Webb. Longmans, Green and

Company. 162 pp. Price \$1; by mail of the Survey \$1.08.

It would be a good thing if managers of industrial enterprises in America were required by their boards of directors, or by law, or by compulsion from the unions, to read The Works Manager Today, by Sidney Webb. Not that it is a complete or very profound treatise of the science of management-on the contrary, it is easy fireside reading for a single evening-but it contains a good deal of very sensible talk to which industrial managers might well give heed.

The material in the book was prepared for delivery before a "private gathering of works managers," and it includes some pertinent remarks on the function of the manager and some of the problems that confront him. The efficient manager is not necessarily the one who gets the largest gross output from any given unit of production, nor he who stimulates the greatest possible production per man employed; but he is the one "who makes his industry efficient in quantity and quality of product in comparison with the human efforts and sacrifices involved,"

This can be accomplished, the author holds, only where such relationships exist between employer and employe as will enable the latter to have confidence in the justice of the management. It is the absence of such confidence, the idea that the whole of every increment in the efficiency of the worker will be seized upon by the employer as a source of increased profits, leaving the worker exploited to a greater degree than ever, that leads to "ca'canny." "There can be no genuine industrial efficiency," Mr. Webb dedeclares, "when a sullen hostility or suspicion leads every workman to keep his output down to just enough to escape dismissal."

This sort of confidence can be estab-

lished, the author intimates, whenever the management makes up its mind to treat the employes in accordance with sound business principles, recognizing the existence of rights belonging to the other parties to the employment contract—just such rights as are recognized when bargaining for the purchase of supplies. Imagine a contract between two business men the terms of which were all decided by one of them alone, as a matter of right!

The injustice of such a procedure when workmen are the other parties to the contract would become evident if the manager would see the thing as it really is. If he would "for a moment imagine himself in the workman's place, he could not fail to realize that no man of common sense could fail to feel any confidence in a decision where, without verification, control, or audit, either joint or independent, one of the parties to a bargain insists upon settling without appeal a complicated issue which vitally affects the bargain for the other party, Obviously no employer or manager would allow the workman such a privilege."

In the same way the refusal of the manager to allow the workmen to be represented by an officer of the union as their accredited agent in negotiations with employers is an arbitrary procedure in a matter which is really not the manager's concern at all. It is "as if the workman were to insist upon coming face to face with the company's share-holders (for it is those who are their real employers) to the exclusion of the company's manager, secretary or solicitor."

The author is quite in line with the employment manager movement in this country in laying stress upon intelligence and justice in hiring and firing. The power of discharge, he says, ought never to be exercised by a subordinate official. "So heavy a penalty as the dismissal of a workman (involving to him a serious dislocation of his life; the perils and demoralization dependent upon looking for work; probably the uprooting of his home and the interruption of his children's schooling, possibly many weeks of penury or semi-starvation for his family and himself) ought to be regarded as a very serious matter."

The author has much to say about the inequity of cutting the piece-rate. He pays his respects to scientific management in this connection, and explains the worker's fear of it, not alone on the ground that the piece-rate may be cut, although the efficiency man "naïvely" says that it won't, but also on the ground that they have nothing whatever to say about establishing the rate in the first place. A good deal is said about the 'manners" of management and the effeet of courtesy in industrial relations. The value of scientific management the author readily concedes. He only asks that there be decent recognition of the

rights of the people supremely affected by it. "Remember," he says, "it is the men's working lives (not your own life) that you are proposing to alter and their craft (not yours) that you may seem to be going to destroy."

In the same way he points out the value and necessity of what is commonly called "welfare work." But he explains in unmistakable language why the workers fear the practice and hate the term. Just as in the case of scientific management, he intimates that industry

will be able to reap the benefits of welfare work when it is placed upon a sound foundation of democracy.

toundation of democracy.

The author looks forward to a better organization of industrial managers on a high professional basis, so that in the future just as the "General Medical Conneil strikes off the register any doctor found guilty of 'infamous conduct in a professional respect," the Association of Managers would censure or even exclude from the profession any manager "who is found to commit the professional folly of seeking a reduction of cost of production by cutting rates." Such an act should be deemed "infamous conduct in a professional respect,"

JOHN A. FITCH.

SUGGESTIONS OF MODERN SCIENCE CONCERNING

By Herbert S. Jennings, John B. Watson, Adolf Meyer, William I. Thomas. The Macmillan Company. 211 pp. Price \$1; by mail of the SURVEY \$1.10.

The authors who have conspired to produce this quadrilateral statement of certain outlooks of science upon education have most admirably fulfilled the promise of their title page. The book is replete with direct and indirect suggestions concerning that problem so much with us nowadays-namely, how to direct education into channels that shall more nearly conserve and develop the best capacities of children. It is a book for the leaders in primary and secondary education to begin the year with, or to "read, mark, learn, and inwardly digest" at any time when they may be auxious or even willing to consider the possibilities of their own part in forwarding some of the best interests of

These four thoroughly equipped writers throw powerful lights here and there upon the educational field. No special system of pedagogy or of educational change is proposed, but many underlying facts, some of them only recently acquired through research, are offered for the upbuilding of a better proportioned pedagogies superstructure.

Professor Jennings, the biologist, examines, to begin with, some of the factors of inheritance and draws particular attention, as almost no writers on heredity do, to the great diversity among human heings and makes a plea for developing special capabilities that others

may not have. His second main point is the harm that ordinary school conditions unwittingly do the young physical organism. To get adequate understanding of the disadvantages and to prevent them, as unnecessary evils, he asserts to be an immediate task.

The psychologist, Profesor Watson, also of Johns Hopkins, directs the reader to the conceptions which form the mainspring of his own researches. So far as concerns his own science, psychology is to be regarded as a study in behavior. The "problem of the schoolroom and of the laboratory is to find out what an individual can instinctively do, what he can be trained to do, and the methods which will lead him most easily and quickly to do both those things which society demands of him and the things which he alone as an individual can do, Professor Watson's paper is devoted to a portrayal of the primary emotions of human beings, most important for recognition in the young, and with setting forth some present-day knowledge of the psychological laws of habit formation. For further development of actual knowledge of the possibilities of better education. Professor Watson calls for a closer cooperation between the psychological laboratory and the schoolroom.

A particularly broad presentation of his part of the subject is given, as would be expected, by Dr. Adolf Mever. To him the real problems of education appear to be inevitably bound with accurate study of the individual-physical, moral, educational. Great values may be developed in records which shall evaluate the pupils; such studies can then be utilized to bring parents and teachers closer together. We may learn from psychopathology especial respect for knowledge concerning the state of health of the separate parts of the individual, the healthy functioning of the individual as a whole, and the mental life of the group. Along these lines Dr. Meyer offers many practical suggestions for parents and school people.

The sociological essay of W. J. Thumas fairly bristles with telling arguments for the necessity of researches into primary group norms—meaning by these the social groups bound together by other than governmental or geographical confines—and understandings of many other social usages, attitudes, methods, or permissive conditions. Written in the author's most pungent style, with the doings of the ages and of the tribes of man called upon to give evidence on any point in hand, the reader is compelled to think hard and fast in these pages.

The reviewer confesses himself enthusiastic about the value of this little book and is not disposed to dwell here upon anything except its extraordinary merits. It must be widely read and appreciated. In these times of assault on humanism and on other parts of the method and content of modern education it well behoves us to look deeper into some of the fundamental aspects of body and mind.

To "E. S. D." of the preface and of the Joint Committee on Education of Chicago, we may well render tribute for our opportunity to profit by this distinguished series of lectures.

WILLIAM HEALY.

A THOUSAND HEALTH QUESTIONS ANSWERED By J. H. Kellogg, M. D. Good Health Publishing Company. 775 pp. Price \$2.50; by mail of the Survey, \$2.62.

I spend a good part of my time in answering questions and I can, therefore, sympathize with a man who makes a book out of one thousand questions and their answers. To me the questions appear to be genuine. They are just the questions which are ordinarily asked by a people in whom an interest in how to live and how to keep well is awakening. They cover much of the fields of sanitation and public and personal hygiene, Being questions asked by people, they are just the subjects in which there is concrete and definite interest. answers are as definite as they could well be.

When a straightforward question is put the answer is responsive or the easion is evident. There is no chance to dodge. Unfortunately, it is not always possible to give a definite answer to a medical question and be certain that it is right.

I do not see how any one person could have answered these questions any better. Very few persons are so well qualified as Dr. Kellogg to answer questions on a wide range of questions. As he says, for years he has had to answer questions and the experience has had educational value for him. As one would expect, his answers to questions on diet reflect the vegetarianism of the author. Likewise it is evident that the

W. A. Evans, M.D.

Philosophy and the Social Problem By Will Durant. Macmillan Company, 272 pp. Price, \$1.50; by mail of the Survey, \$1.62.

author is a firm believer in hydrotherapy.

Very lively reading is found in these chapters on Socrates. Plato, Bacon, Spinoza and Nietzsche and in the author's concluding four chapters on reconstruction for today. In a style that rises often to marked eloquence, Mr. Durant draws vivid pictures of his philosophers and focuses attention upon the social origin and social significance of their teachings. He holds that social questions have been their leading concern and that neither the social problem nor philosophy can be approached properly except as either is used to explain the other.

His interpretations of the men whom he has chosen are, of course, quite sympathetic. Even Plato, whom one would suppose uncongenial to a pragmatist and individualist, is lauded for his "but constructive passion," "the seeing of perfection and the will to make perfection," "the courage of the intellect that not only will perceive but will re-make." In Mr. Durant's own scheme for rebuilding, there is little that needs comment here. He proposes in the main "a more generous cooperation among the different currents in the stream of reconstructive thought."

The chief value of the book lies in its call to rescue philosophy from the calm death of social ineffectiveness. thinker of the new time is not to content himself with annotating the past: he is to help his own age live up more nearly to its possibilities. Such a purpose is by all means to be encouraged. It is to be feared, however, that in order to make out his case, Mr. Durant has in some instances made his philosophers a bit too modern. It is rather a strained interpretation, for example, to read into the Socratic "virtue of wisdom" an endorsement of psychoanalysis. Every help from the past should be welcomed; but in the interests of the truth for which the author pleads, let us remember that there are limits beyond which it is unjustifiable to put new content into ancient formulas.

HENRY NEUMANN.

MANKIND

By Seth K. Humphrey. Charles Scribner's Sons. 223 pp. Price \$1.50; by mail of the SURVEY \$1.62.

A careful student of society today is haffled more and more by the infinite complexity and difficulties of the problems mankind is facing. The more one studies, the deeper one delves into the history of social evolution, the more varied and the more intervoven are found to be the threads which make up the warp and woof of social progress. Above all, the careful thinker has to refuse to accept any one cure for all social evils. No program, be it birth-control, single tax, socialism or pacifism, can be accepted as the cure for all the ills of society nor the cause of all past social failures.

We turn therefore from this book on racial values with considerable distrust. especially after reading such a sentence as the following: "We see in racial values effectively conserved the one hope for all future civilization." The author tells us at the start that his aim is to present the subject of race untechnically to awaken an appreciation of the fundamental part played in human affairs by inborn racial qualities. He states that he will not refer to authorities, for scarcely an assertion is made on the strength of a single authority but is based on generally accepted laws. He then proceeds to make dogmatic statements, presenting what is, in the opinion of the reviewer, a one-sided point of view which is challenged by many leading authorities such as Professors Boas, Patten, Ward and many others of equal rank.

Illustrations are: "It has been established beyond reasonable doubt that both physical and mental inheritance in human stock follow laws of breeding quite similar to those for any other stock." "Civilization imposes conditions upon man which effectually block-indeed, reverse-the processes of evolution. Education, training, social work can no more stay the effects of breeding than stop the wind that blows." "Civilization has always been self-destructive. Whether ours is to survive depends upon whether we elect to use our superior knowledge for the maintenance of a breed of men fit to carry it on."

Such assertions contain a kernel of truth which makes them all the more dangerous. Few dispute the fact that biologically the ancient Greeks were as far advanced as mankind is today and few today but accept the Weismannian position of the non-inheritance of acquired characters. This book, however, overlooks entirely the economic interpretation of history, the influence of social heredity in calling out the potentialities which for all we know may lie dormant in every individual, be their heredity no further advanced than that of the ancient Romans. This author regards a great mass of mankind as mentally incapable by inheritance. Proof for this has not been called to our attention; the evidence with which we are acquainted seems stronger against it.

The writer's opinion of woman is influenced by his conception of her value as a means of transmitting a valuable trait down the family line. Other chapters on the Nations at War, the Immigration Problem and the Negro all show themselves tinged by dogmatism and the same narrow point of view. The book contains some facts that are sound and worthy of consideration, but they are presented in such a way that its value is practically nil, if not positively harnful. AMEY EATON WATSON,

FOOD—FUEL FOR THE HUMAN ENGINE By Eugene Lyman Fisk. Funk & Wagnalls. 77 pp. Price \$.75; by mail of the SURVEY \$.80.

This little book is an exposition of the fundamental principles of nutrition, very simply and attractively set forth for the use of the reader without technical knowledge of the subject. For illustrative material it contains a record of the interesting diet squad experiment carried on January 9 to 29, 1917, by the Life Extension Institute in cooperation with the department of nutrition, Teachers' College, Columbia University, Twelve young men from the New York Police Department volunteered for the test and ate only the food provided at the diet kitchen.

The experiment demonstrated the effect which scientific knowledge of food values and methods of buying can exert on lowering the cost of food and the possibility of maintaining health and acsibility of the maintaining the food served cost 25 cents per man per day, the men having an estimated average requirement of 3,500 calories per day. Examination at the close of the period showed that they had improved in physical condition.

The food given the men, measured by scientific standards, was considered adequate by the dietritans conducting the experiment, but the author adds, "with more money to spend the diet could have been brought closer to the ideal by using more fruit and green vegetables." A technical paper is promised giving complete scientific data, none of which appear in this booklet. Menus for the whole period and all recipes used in the preparation of the food are given; also cost of all food materials per pound and ser 100 calories of food value.

The book is valuable as an aid to those without training in food values who wish either for themselves or others to get the best results for money spent for food. The menus and recipes are attractive though some are too elaborate tractive though some are too elaborate in the housewife with scanty equipment and little time. Modifications to suit the needs of families with children are suggested.

In using the data on cost for the purpose of estimating the minimum cost of adequate food for a family under ordinary circumstances, it must be remembered that the best scientific training available was used in choosing and buying the food used in this test, and that a radical change in food labits was involved to which the men probably would not have consented under ordinary conditions.

FLORENCE NESBITT.

ARISTODEMOCRACY

By Sir Charles Waldstein. Longmans, Green Co. 434 pp. Price \$3.50; by mail of the SURVEY \$3.70.

Aristodemocracy is the democracy of the ideal, the ethical, the true. The culture which preceded Kultur in Germany was a fair sample. Then true scholarship was prized. All subjects were studied, and a keen and friendly interest was shown in all foreigners because of what they might contribute. Now chauvinism and militarism have gained the ascendancy, foreigners are despised and ecotism is rampant.

The present tendency in Germany, and elsewhere as far as it is the same, is wrong. There is as much opportunity in peace as in war to develop and demonstrate manly qualities. "Everyone who day by day curbs his instincts of selfishness and greed out of due regard to the claims of his fellow-men" has an opportunity "for the development of altruistic enthusiasm." It is not good to live in a time "when to deceive and to

spy and to try every trick that may mislead and bring one nearer to a destructive goal becomes a virtue."

The author does not favor Zionism. He does not favor Prussian domination He believes in internationalism. But he rather inconsistently thinks England's colonial policy has been good for the colonies. International capital and labor will become ever stronger influences against war. "In this great issue, following out their separate and, at times, divergent courses and interests, they definitely tend to unite in one common goal of international federation and of opposition to But more important still does he consider the growing sense of a common humanity. As time goes by, the horizontal divisions of human society will count for more and the perpendicular divisions for less. This, he argues, will work against international wars, but he does not show how class wars are to be averted when the horizontal divisions become more fully recognized.

Divisions must be eliminated, he seems to argue, for "Moses, Christ and Plato" are the chosen leaders. "They typify Duty, Charity and Ideality," and with these ideals horizontal divisions must disappear. "Inseparably interwoven, acting upon one another and modifying each other, these three main aspects of the moral world, as it lives in man's soul or may, we hope, exist beyond the spheres terrestrial, will help us to an understanding of man in the past, harmonize our actions to ennoble ourselves and to benefit our neighbor, while increasing the happiness of each, and will make of each one of us, and through us of our surroundings, forces, however weak, which will lead to the perfecting of future man.'

The whole of chapter VIII offers an excellent social, religious and political creed. The book as a whole is tiresome rather than stimulating, but throughout there is presented an idealism which modern civilization must nourish and fan into flame or perish.

EDWARD T. HARTMAN.

THE HISTORICAL DEVELOPMENT OF RELIGION IN CHINA
By W. J. Clennell. E. P. Dutton & Co. 260 pp. Price \$2.00; by mail of the SURVEY. \$2.10.

The author is a member of the British crossular service who has lived some years in China and Manchuria; he is in every way admirably qualified for the task he has undertaken. Scholarly, thoughtful, suggestive, reverent, the work before us is one of the very best of its kind. Without any claim to review the very extended researches on the same subject made by the late Dr. Legge and others, Mr. Clennell gives us much that is new and still more that is of great practical use in the study of China's glorious past and tangled present

ent. He has a reverent appreciation for the ancient faiths of the East, though he writes from a Christian standpoint.

He was evidently as much impressed by the great sacred mountain, Tai Shan, as was the present reviewer when he visited that age-long holy ground during his own residence in China. To an old dweller on the China coast this book can hardly fail to revive the happiest memories. For any one it is an extremely valuable introduction to the religious story of an empire that till yesterday was extremely bigoted in matters political, while always exceedingly open-minded as to anything purely religious.

LAS C. HANNAIL.

THE NEW ERA IN CANADA Edited by J. O. Miller. J. M. Dent & Sons, Toronto, 421 pp. Price \$1.75; by mail of the SURVEY, \$1.90.

Here are sixteen essays by fifteen different authors, some of whom write with a real sense of message; others appear to have been rather bored by the invitation to contribute. The editor gives us an admirable essay on the government of cities, which is taken largely from American experience.

Sir John Willison's discussion of the problems of immigration assumes that the war will hugely stimulate the tendency for population to cross the ocean from Europe to North America, and does not even consider the lears of many students of the problem, that for a considerable time the movements of people may be in a contrary direction.

No French Canadian is a contributor, but Professor Wrong's discussion of Canada's bi-lingual question is specially timely from the most unfortunate reopening of ancient sores by the recent general election. His plea for greater study of French ideals by the English-speaking folk of the dominion deserves to be very heavily underlined. The same thing is quite equally true of the English-stritude to the magnificent old culture of Ireland.

Two editors of periodicals, A. J. Glazebrook and I. W. Dafoe, discuss most interestingly the future relations of Canada to the rest of the British empire: the latter argues strongly for the new scheme of "alliance under the crown." As he fully realizes, the real crux is the foreign policy of the confederacy, and it can hardly be counted a very final solution that the United Kingdom "would be primus inter pares. and nine-tenths of the problems of foreign policy would fall within its jurisdiction. But it would be within the competence of any member of the alliance, in a matter of prime importance to itself, to involve the whole commonwealth in war.'

Nothing perhaps illustrates the altruism of the allied war aims better than the fact that if they were to be de-

cisively and completely realized (so that even the weakest and wealthiest nation on the earth were absolutely safe from foreign interference) there would be an almost irresistible tendency for some members of the British dominions to drift away from the rest. But of this there is little real danger at present. Probably the acquisition of south Pacific islands by Japan will do more than most people foresee at the moment per-manently to cement Australasia to Britain and the Philippine democracy to America.

The warm friendliness that the volume before us displays for the United States, as Canada's nearest neighbor and close friend, should be keenly appreciated on this side of the international boundary. IAN C. HANNAH.

### THE INSURGENT THEATER

By Thomas H. Dickinson, B. W. Huebsch. 243 pp. Price \$1.25; by mail of the SURVEY \$1.37.

OUTDOOR THEATER

By Frank A. Waugh. Richard G. Badger, 145 pp. Price \$2,50; by mail of the SURVEY \$2.65.

Many questions about the stage are satisfactorily answered by Professor Dickinson in his careful study of the new trend of the theater. He traces the development of the last six years-the dissatisfaction with the old theater and the effort to build a new, first by those already in the profession, then by those working from the outside; through the unsuccessful means of subsidies and of federated audiences, through the educational means of drama societies and dramatic laboratories, to the present stage of the little theater movement,

But this is more than a chronicle of the pioneers and their ventures; it is a clear, balanced and broadminded critique helpful alike to the play-lover, the actor, the playwright and the producer. The responsibility of the audience is well-defined, the artistic devotion of those who are working out little theaters in town and country is keenly appreciated, and an encouraging outlook for the future is entertained. Simplicity, artistic cooperation and the absence of commercial spirit are making little theaters possible in small centers all over the country. This means good plays by local groups instead of cheap vaudeville sent out from New York. The chief groups and leaders that have contributed to the progress of the insurgent theater are frankly defined and their successes and failures are carefully scrutinized.

By way of helping the untried enthusiast over one of his chief difficulties a chapter is devoted to the theater and the law. A list of representative plays, by theaters, is given in the appendix. Of the author's conclusions one of the most fundamental is. "Money is not a stimulus to work or to imagination in the theater," and his advice in regard to the theaters of the future is, "Endow them. yes, but not with money till you have endowed them with brains . . , not with a building until you have provided them an audience "

Professor Waugh's book on the use and construction of garden theaters contains many designs and working plans of "players' greens," open-air theaters and college bowls. It is presented from the landscape architect's point of view rather than the dramatist's. By way of preface Percy MacKave urges the founding of outdoor theaters for the people, "No better investment . . . could be made by a country community than an outdoor theater, properly conducted during the outdoor season."

As most suitable types of performance for the open air are cited dramas of the Shakespearean and Greek traditions. pageants and masques. Modern drama is too apt to be built upon steam-heated tradition. Of the problems of design, stress is laid on too often neglected fundamentals, orientation and acoustics. Simplicity of construction and appointment is urged, puncheon benches on carpets of pine needles are preferred to the popular but uncomfortable tiers of cement seats. Torches are considered more suitable than electric lights. But of all the difficulties which confront the openair producer, one of the most vital is perhaps wisely omitted from present consideration-the weather!

MABEL HAY BARROWS MUSSEY.

Physical Training for Business Men By H. Irving Hancock. G. P. Pulnam's Sons. 223 pp. Price \$1.75; by mail of the Survey, \$1.87.

"Business men," in this connection. must be held to include men in other professions who spend much of their time at the desk. All that the author has to say, for instance, about "the error of physical slovenliness" applies with great force to men whose life work consists in the adjustment of social relationships. There is also, in these sad days of fuel economy, an added problem for every sedentary worker of keeping warm by internal combustion which can be aided materially by the right forms of exercise.

Books on physical training are either manuals which most people will open only on doctor's orders, or they are made more readable with the help of a good deal of matter not strictly relevant. The present volume is of the latter variety; it may be added that its "padding" is interesting and contains many shrewd observations. Incidentally the author, without knowing it, supports one of the more recent discoveries in scientific management when he points out that elimination of so-called unnecessary movements adds to fatigue instead of lessening it if it leads to a succession of abrupt, jerky movements.

One lesson which the author particularly tries to drive home is that immoderate haste is not only injurious to health but defeats its own purpose. His system of exercises is devised more to give a proper balance and feeling of fitness to the whole body than to increase the efficiency of any particular organ or group of organs. Quite properly, he devotes much space to questions of "appearance," a natural approach to questions of physical fitness for the man who has not let himself run down sufficiently to feel anxious about his health.

A. B. Phelan's synthetic photographs of a model in the performance of the various exercises may be clever, but on the whole the diagrammatic illustrations of the old handbooks were easier to un-B. L. derstand

A MANUAL OF THE TREATMENT OF THE VENEREAL DISEASES

By William Allen Pusey, M.D., and others. American Medical Association. 100 pp. Price \$.25; by mail of the SURVEY. \$.28.

In convenient pocket form, the American Medical Association has reprinted several articles, which have appeared in the pages of the association's journal during the past few weeks, on the management of venereal diseases. The material is stamped with the approval of the surgeon-general of the United States army. It discusses fully the various diseases included under the general term, venereal. Its material is simple as well as detailed and is intended to instruct persons afflicted with these diseases as well as to offer a program of prevention and control.

This program includes such social measures as, first, the suppression of prostitution and of the liquor traffic, and the provision of proper social surroundings and recreation; secondly, education of soldiers and civilians in regard to these diseases; third, prophylactic measures, social and personal; provision for special infirmaries or dispensaries where these do not already exist; and, finally, strict regulation of the coming and going of enlisted men.

In all these measures, active cooperation of civilian service with military is provided for. In view of this fact, this little book will be of value to the social worker who is in any way connected with the work of social hygiene or who is interested in this work.

### BETTER CARE OF COUNTRY BABIES

THE teleral Children's Bureau has just published its first report on the care of babies and mothers in rural districts. This report, the first of a series on the subject, is based on the study of a county in Kansas where the level of prosperity is high, no home is more than twenty miles from a doctor, telephones are abundant, and roads are good.

Yet even here two-thirds of the mothers had no medical care before their children were born; more than one-third had no visit from the physician after the child was born; four-fifths of the women, farmers' wives, had to work for large farm crews until very near the time of confinement. The infant mortality rate, though fairly low in this county, could be brought even much lower by provision of standard medical and nursing care, according to the plan proposed by the Children's Bureau. "The next step. says the report, "may well be the establishment of a nursing service for the rural parts of a county.

Practical plans for helping to meet the rural situation are announced from another state-Wisconsin-whose Anti-Tuberculosis Association has opened a "correspondence department of advice" for nurses, a three months' training course for graduate nurses wishing to enter the field of public health, and a six weeks' summer "graduate course" for nurses already in this field. "These trained courses. writes Louise F. Brand, of the Wisconsin association. "are for the specific purpose of meeting needs for public health nurses in states which, like Wisconsin, have large rural and small-town populations."

These courses have grown out of the plan originated several years ago of offering the service of a public health nurse for one month to the communities which made the highest per capita sales of Red Cross Christmas Seals.

The success of this plan in rural districts proved the desirability of creating a demand for public health nursing in the smaller cities of the state. Again the response to this plan brought the as-448

sociation face to face with a new problem—a rapidly increasing demand and a limited supply. Hence, it has been found that nurses accustomed to work in metropolitan districts have difficulty in facing the particular problems of curtal areas.

Country as well as city may be expected to shure in the benefits of another nursing development—a fellowship, not four Greek archeology, nor for Romance philology, but for the study of public health, planned by a group of Vassar College graduates and others, friends of Mary Pemberton Nourse, whose death in 1916 interrupted her preparation for service in the public health field.

The fund will be named in memory of Miss Nourse. Though administered under Vassar College, it is open to any woman who can fulfill its terms—the bachelor's degree, some concrete study tending towards public health work or practical experience in the work, and an adequate conception of the scope and importance of public health.

"The maintenance and progress of democratic life," writes Julia C. Lathrop, chief of the federal Children's Bureau, in a letter to the founders of the Nourse Fund commending their project, "now depends in large measure upon our ability to solve the problems of public health. Involved as they are with problems of economics, industrial and social welfare, we cannot suspend our responsibility for this fundamental work. War only makes it more timely, more urgently necessary."

### A CHARITY FEDERATION FOR

"FEDERATION of philanthropies is no new idea for Toronto," says a bulletin of the city's Bureau of Municipal Research. This city is at present divided into nine districts, each with a Neighborhood Workers' Association which coordinates the detailed reliei activities for the district of the various social agencies, large and small. These local associations, so far, have been without paid secretaries, and their city-wide cooperation is secured by a Central Council, elected on a representative basis.

The advantages of close cooperation have become so apparent that, since no other provision for this purpose was available, the municipal Social Service Commission, out of city funds, paid the salaries of three secretaries to the Central Council. This arrangement, the bureau suggests, has led to an undesirable dual control, which could be overcome in part if the necessary appropriation were voted to the Central Council itself.

But, in order to make the whole system of relief more directly responsible to the citizens, it is recommended that the council forego this public subsidy and itself raise annually the sum necessary for the maintenance of an adequate central staff; i. e., a chief executive officer and three secretaries.

For the same reason, the controlling influence of the professional workers through their elected representatives on the central body—which is essential for a smooth working of the system—should be supplemented, it is urged, by a lay body, representative of the city at large, to decide on plans of work for the city as a whole and to find the necessary money.

By surveying the philanthropic field as a whole, the proposed "Lay Board of Federation of Philanthropies" would not only help in unifying policy as regards outdoor relief, but would bring it into closer connection with the policies concerning institutional relief and hospital service, which also might be worked out by separate central councils financed by and responsible to the lay board.

#### ANOTHER RALLY AGAINST TUBERCULOSIS

A GROUP of experts in the study and prevention of tuberculosis gathered at the Hotel Savoy in New York city on January 13 for the twofold purpose of announcing that the National Jewish Hospital For Consumptives at Denver, Colo., was to be placed at the disposal of the government for the care of soldiers found to be afflicted with tuberculosis; and second, to cohfer on the need of anti-tuberculosis work as revealed by war conditions.

The hospital itself is a somewhat unique institution. One article of the unique institution. One article of the creed of its founder, Samuel Grabfelder, is that no hospital has done its duty toward a patient when it cures him and then turns him out without knowing what is to become of him. "If feel, said Mr. Grabfelder, "that our foll; said Mr. Grabfelder, "that our patient is assured of living under conditions that will not tend to make him again a vietim of the disease."

Because Mr. Grabfelder so believes, the hospital has, in addition to the usual provision for the care of patients-a research laboratory, examining physicians, dental department, dispensary, and farm, providing fresh milk, eggs, vegetables every day-a social agency offering the service of a social welfare worker and visiting nurse for the aftercare of patients; a child welfare department for the admission of children as preventorium cases; an industrial school where classes are held in English, domestic science, bookkeeping, and other subjects, and a graduated work system. This system provides for the careful examination of patients in regard to their ability to work at tasks requiring from a half hour's work to three hours' work daily. This enables patients to become self-supporting at least in part when they are discharged, and also gives them an occupation which will distract their attention while still within the hospital.

The value of an institution including these departments among its active working provisions is evident at this time when every effort is being made to provide not only for the hospital care of recruits found until for service or soldiers who return disabled from the front, but also, to fit them to take again their stand in civilian life on the basis of independence.

Col. C. F. Bushnell, of the surgeongeneral's office in Washington, spoke on the numbers of consumptives which the draft was revealing in this country. "The latest reports of the department," Colonel Bushnell said, "indicate that about 2 per cent of the men examined were found to have active tuberculosis."

Col. C. U. Dercle, of the French Army Medical Corps, on duty in Washington, said that some of the stories reporting France as a nation undermined with tuberculosis are much exaggerated. They claim to be based upon official figures published at the Paris Academy of Medicine in 1915, These figures. however, did not represent the findings of experts in diagnosis, for under more careful tests nearly 60 per cent of the original number of cases were found to have been wrongly diagnosed. In the urgency of those early months of the war, examinations were given by civilian physicians, many of whom had had but slight acquaintance with tuberculosis, and many symptoms not properly belonging to that disease were, in the anxiety of the time, wrongly interpreted.

Other speakers at the Savoy were Jane Addams of Hull House, who reminded the men and women interested in combating tube reulosis that the disease existed particularly among the poorly tuberoulosis and fattigued, and was therefore to some extent the result of economic conditions; Dr. Herman M. Biggs, New York state commissioner of health; John H. Finley, commissioner of education of New York state; and Dr. Charles J. Hatfield, secretary of the National Association for the Study and Prevention of Tuberculosis.

### FINDING COAL FOR EMPTY BUCKETS

CHURCHES, schools, even munition factories, have been obliged during the last few weeks to close down for lack of fuel. In New York and Philadelphia, coal cars and sheds have been raided while railroad guards and policemen were powerless to stop the frantic masses who were gathering the precious fuel in bage, bastes, buckets and every conceivable receptacle. Pictures in the Philadelphia papers, more particularly, show, riots resembling scenes of the Petrograd revolution.

The fuel administrators, federal, state and city, energetically pressed forward plans for relieving in the eastern cities a shortage which was almost entirely due to congestion of traffic, intensified by an unusual cold spell. But after two weeks of suffering, the need for emergency measures to assure a sufficient supply for the homes of the people is as great as it was at the beginning. task is not primarily one of relief, in the narrow sense, since the great majority of those in need of fuel are able to pay for it; but the most drastic measures had to he taken to reduce the suffering produced in hundreds of thousands of homes.

In New York, the situation was madeworse by the refusal of dealers to distribute coal and sell it at government rares which, owing to the high cost of trucking brought about by the general traffic congestion, would, they said, involve a loss of sixty cents per ton. The city Fuel Administration decided to distribute daily 3,000 tross in quantities not

exceeding half a ton. This quantity, however, either has not been forthcoming or has proved insufficient.

The mayor, after learning from the fuel administrator that he had no power to confiscate coal stored in reasonable quantities for industrial purposes, sent the police to inquire into the amounts of coal in the cellars of private houses and appealed to the wealther citizens to let him have for distribution any surplus over their immediate wants. In this way, many of the retail yards in all parts of the city have been kept supplied.

In addition, the mayor collected a small fund for the purpose of giving coal to the destitute. Dealers throughout the city were asked to honor tickets for coal given out by the city and to give priority to their holders over other purchasers. Churches, settlements and other voluntary agencies are cooperating in issuing tickets, giving preference to homes with children. Fraud is prevented, as far as possible, by police investigation. As in all similar recent emergencies, the city police of New York are acting with the utmost tact and friendliness towards the poor and prove themselves an important social agent of the city government.

In Philadelphia, no special work has 'been done either by the city authorities or by private philanthropy; there has been so little coal in the city that practically nothing could be done apart from the activities of the Fuel Administration to get supplies. Here, even more than in New York, considerable public indignation has arisen against the Fuel Administration which is held to sympathize unduly with the dealers and, while anxious to keep war industries going, to be insensible to the urgent domestic need for fuel.

In Buffalo, N. Y., the distress, says Frederic Almy, has been mostly with people of small means who cannot receive charity: though the rich as well as the poor have been uncomfortable, especially those who use natural gas instead of coal, for the supply of this is small and miserable. In one respect, however, Buffalo provides an object lesson in preparedness. As far back as October, methods of preventing a coal famine among the poor were discussed; and one of the largest coal dealers offered to place in a special pocket for the Charity Organization Society, of which Mr. Almy is secretary, all the coal needed this winter for its families. These have, in fact, been adequately cared for without suffering. In October, the overseer of the poor had no coal and had to send families to the Charity Organization Society; since then a special supply has been made available for him also.

In Detroit, likewise, the poor have been provided for by preferential consignments. The rest of the people, at least those who for lack of foresight or

of storage space have not secured a sufficient supply during the summer, are in continuous difficulty. The Police Department, acting as agent for the Fuel Administration, is keeping track of the local dealers' supply and issues orders for a ton at a time against the dealers to those who are entirely or almost without coal. Even so, the supply is at times between two and three thousand orders behind, and people have to go without fuel for a day or two. Preference in orders, as in New York, is given to authorities are cooperating with the Fuel Administration in economizing consumption as much as possible. William J. Norton, secretary of the Associated Charities, to whom we owe this information, at the time of writing saw the end of the difficulty by an influx of coal from Ohio.

In Chicago, the coal supply has been adequate; hence no emergency plans have been necessary beyond the efforts of the charities to prevent avoidable suffer-

ing among the poor.

In Boston, all efforts to keep open channels of supply proved insufficient, It was agreed, as soon as it became apparent that a marked shortage was inevitable, that the families who depend on coal to cook the daily meals must be given preference. To do this, an attempt is made to restore the bag trade which chiefly operates through the corner procesies. Until this succeeds, the coal dealers have arranged to sell at the sixty or more wharves coal in quantities of 25, 50 and 100 pounds to those who will come for it. A price, correspondingly lower than for delivered coal, was reached by mutual agreement.

In the North and West Ends of Boston and certain sections of the South, where there are no wharves, settlement houses are being used as stations for these small sales. A joint committee of coal dealers and charitable agencies is daily providing for those unable to pay for their fuel. At the city hall, the Fuel Administration has established an office to receive applications from those unable for one reason or another to go to the wharves or coal depots. These orders are filled with the help of city teans and motor trucks hired by private subscription. A reserve supply for the hospitals has been provided for.

"There is," writes a member of the local fuel administration, "a great deal of neighborly helpfulness; it has become a common sight to see people carry water and coal to neighbors whose pipes are frozen and whose coal hod is empty." The Boston Fuel Committee is doing what it can to prevent the closing of the schools. "It is pertinent to ask," writes our informant, "shall saloons, breveries, social clubs, and the like, run early and late at the expense of the schools." Naturally, one cannot help thinking of all

sorts of adjustments, such as the combining of churches, the climination of certain organizations and the suspension on part time of others. And this must take place unless the supply greatly increases."

In Cleveland, a fine spirit of cooperation among operators, the Chamber of Commerce and other bodies, prevented oversupplies on the one hand and filled the temporary needs for small amounts on the other. Energetic measures were taken to ascertain all sources of supply and to mobilize agencies of distribution. The Relief Department of the city contracted ahead for coal and, pressing all possible agencies for delivery into service and also calling for unusual efforts at individual fetching of supplies, enables those to get coal who could not pay for delivery. The city's supply of natural gas, though the pressure was very low in the severe weather, helped to meet the needs.

At one time the situation appeared desperate. The Cleveland Electric Illuminating Company, whose plants run many of the manufacturing establishments, the street cars, public buildings, etc., shut down all but one-third of the factories for several days in order to be able to run the street cars and to light the homes of the city. The factories allowed to stay open were munitions plants and agencies for food and other necessary supplies. A complete tie-up of the whole city was only prevented just in time. "The whole experience. writes Sherman C. Kingsley, director of the Welfare Federation, "has served to bring home to people the fact that transportation, illumination, heating-all these commodities and enterprises-are fundamentally great human services rather than merely commercial organizations."

In Denver, a city ordinance passed last summer empowered the mayor to obtain, at a time of emergency, such fuel and food by purchase or otherwise as may be required for the relief of the city and county and to supply this at cost price. In the course of the fall, George A. Levy, chief of the Industrial Bureau, made extensive visits to the coal fields and, from many options secured, finally made contracts for the entire output of three mines, unconnected with the local coal combine. Small advances were paid to enable the purchase of additional equipment for the purpose of increasing output and, in the case of one of the mines, to lay a track which would facilitate direct shipments to the city.

Coal yards in the city were rented, and delivery to the homes of the people was contracted for with a large coal delivery firm. Thus a complete plan for delivery of fuel from the nine to the bin was completed without a heavy investment of the city in municipal ownership. (Further details are given by Mr. Levy in the American City for January.

In three months, the city took orders from about four thousand individual families for the delivery of coal in quantities ranging from one to three tons. In addition, the public buildings and institutions have been supplied. At the municipal lodging house and the bath house, sacked coal in lots of 50 and 100 pounds is sold to families too poor to buy a ton at a time. In this case, the coal is furnished by private dealers and retailed at a trifle less than cost.

Substitution of wood and oil for coal. in spite of the admonition of the Fuel Administration, has been found practicable only to a very small extent in the big cities. The national campaign now waged for fuel conservation, for which a special speakers' pamphlet has just been issued by the Fuel Administration. may contribute, however, to lessen the habitual wastefulness of the American people in this respect, with benefit not only to their pocket and to a better distribution of available supplies but also to health. The Extension Department of the Massachusetts Board of Education has issued a bulletin on Coal Thrift with detailed suggestions for a more economical heating of houses.

### MEN WHO CANNOT GIVE THE COUNTERSIGN

RECENT examination of French enlistment statistics by Dr. Chervin reports the rejection of seventyfive men out of every ten thousand because of stammering. Their rejection was based upon the inability to ask and give the countersign. Dr. Chervin tells of an officer whose stammering was so slight that it did not at first incapacitate him for military service; but one day while marching his men forward the idea flashed into his mind that he would not be able to give the command to halt. The result of this nervous fear was that he was totally unable to call "Halt." and only by a kind of cry succeeded in stopping the men on the very edge of a

ditch. The incident is quoted by Ernest Tompkins of Los Angeles, a layman, whose studies in the field of stammering have been extensive. Mr. Tompkins' theory is that stammering is certainly at first a temporary speech disturbance that frequently results from a fright, accident, serious illness or extreme emotion or exhaustion. The child who stammers is frequently imitated by teasing playfellows. His embarrassment on this account simply intensifies the tendency to stammer, and the impediment is quickly acquired. "Watchfulness of any tendency," says Mr. Tompkins, "to hesitate in speech is an exceedingly simple way of avoiding early embarrassment and later actual disadvantage for the child.'

Mr. Tompkins estimates that there

are probably 300,000 children in the United States who are cultivating this speech disorder. He urges that parents and teachers forbid the child to talk while stammering, but rather, to encourage it to wait and quiet itself, in which case it usually can speak without any difficulty; or else to express itself by signs. It "will surely recover if this treatment is continued.

The importance of this matter from the educational as well as the military angle is emphasized by an article appearing in a recent issue of the Journal of Heredity. This article, based upon the study of a large number of cases of stammering, shows that in a majority of instances the stammering child has stammering relatives. But that stammering is not merely the result of the child's imitation of the fashion of speaking is evident from the fact that often they live at a distance and there has been no opportunity for the child to meet them. The article concludes that stammering is a defect which tends to become hereditary, and it urges prompt attention to the defect, in consequence,

In this connection, should be mentioned the courses under the direction of Dr. Walter B. Swift of the Harvard School of Medicine, whose voice and speech clinics were opened in 1912 and 1915, respectively. Dr. Swift's courses emphasize first, the medical aspect of speech impediments, such as the interference with speech development caused by enlarged tonsils, cleft palate or paralysis of the tongue; then the psychological aspect, in which he discusses the mental functions relating to speech; third, the treatment of speech defects. and finally, the relationship of speech disorder to public schools.

A definite endeavor is made to arouse the interest of teachers in the medical phase of this defect in their students. Indeed, the role of the teacher in saving the child from permanent defect is strongly emphasized. During the past studied the methods and systems of the Harvard voice and speech clinics in order to put these into practice in their own classrooms.

### ONLY DEMOCRATS NEED APPLY

\*HOSE who watched with approval during Mayor Mitchel's administration in New York city the growth of progressive policies in the departments of charities, corrections, police and others, are finding small hope for a further development of such policies in the appointments by Mayor Hylan and his associates. For the most part, the new persons are unknown or none too favorably known for their acquaintance with progressive thought. Tammany Hall is credited with having "inspired" twelve of the major appointments, the Demo-

# Fancy Table Linens

at McCutcheon's

We are very jealous of McCutcheon reputation! Therefore never a question may arise of the VALUE guaranteed to you when you buy McCutcheon Linens -they're always ALL PURE Linen.

January offers a splendid opportunity to satisfy your desire for beautiful, Snowy-White Linens for every kind of household use. We quote below for some very desirable Fancy Linens:

Madeira Embroidery-Hand-made Scallops and Eyelets on fine Linen, in every conceivable shape and style.

ese papers may be obtained by addre General Education Board, 61 Broadway, New York City

tion, social investigation, social statistics, the clearing bureau and the children's home bureau, whose work is described on page 435. Nevertheless Mr. Coler has already indicated his intention to curtail some, at least, of the work of these bureaus. The holding up of all temporary appointments under the civil service by Mayor Hylan has had that effect, in part. Mr. Coler has appointed as his third deputy Stephen A. Nugent, a Democratic leader in the Bronx, who previously held this position for some months under Commissioner Drummond and who is understood to have had strong Tammany backing for the place,

Another Tammany leader, William Dalton, has been made deputy commissioner of correction. Mayor Hylan is understood to be favorable to a bill introduced in the legislature since his election to abolish the Parole Commission of three paid members, which Katherine B. Davis was instrumental in creating. This commission was established to give force and virility to the indeterminate sentence act.

Robert W. Hebberd, who retired from the secretaryship of the State Board of Charities while the Strong inquiry into the conduct of that body was in progress, has returned to public life as secretary of the Child Welfare Board. This board administers the mothers' pension act. Mr. Hebberd was made defendant in a perjury charge for testimony given before Commissioner Strong. and Justice Greenbaum, of the state Supreme Court, held that while "a jury would be justified in finding that Hebberd wilfully and knowingly testified falsely" before the commissioner, nevertheless the "alleged perjurious testimony" was not material to the investigation and therefore the information against him could not be sustained.

Five members of the Child Welfare Board who had stood for the budget plan of granting pensions, including Henry Bruere and William H. Mathews, resigned recently as a protest against what they feared would be loose methods of administration in the future. Successors to them have not yet been announced.

The Women's Municipal League has issued a statement specifically urging all civic organizations to oppose the curtailment of the five bureaus in the department of charities.

### NEW HAZARDS IN NEW JOBS FOR WOMEN

PROHIBITION of women from some industries or protection of women in all industries were the alternatives before women labor delegates to a conference on maintaining labor standards in war time, called by the Women's Trade Union League of New York last Sunday. Both sides had their adherents until a little Jewish cloakmaker settled

the argument for good and all. "We women might some day be presidents of the United States, so every job should give us a chance," she said; and thereupon the conference voted down a resolution opposing the introduction of women in machinery plants and as conductors on the cars.

Instead, resolutions were passed calling for equal pay for equal work, an eight-hour day for all women workers including those in business offices, telegraph or telephone offices; street, elevated, subway, or surface electric railways; railroad shops and sheds and elevators; a Saturday half holiday and one full day's rest in each calendar week; an increase of twenty-five factory inspectors on the State Department of Labor force; and the passage of a health insurance law. Even though the hiring of girls as messengers was characterized by one excited gentleman as "laying the female of the species open to the white slave traffic," this employment was not barred to woman labor by the delegates' disapproval. Rather, it was recommended that a twenty-five-year age limit be established by law for women in the messenger service and that the Consumers' League be asked to raise the limit proposed by them in a bill to be introduced in the legislature from twenty-one to twenty-five years.

At present boy messengers are protected by a regulation which prohibits their employment after certain hours, but when that legislation was drafted, the possibility of women holding such jobs had never been dreamed of, so that the eighty girls now employed as messengers in New York city and the forty so employed up state are not safeguarded in any way. The wages re-ceived by women are the same as those paid men. Their hours vary from eight to ten and none work after 10 P.M.: about 30 per cent are at their duties seven days a week as the one-day-of-restin-seven law applies only to factories. The greatest danger, however, lies in the youth of the girl workers for many are as young as fourteen and sixteen years of age.

Although the substitution of women for men has not yet resulted in as disastrous effects as were found in Great Britain at the beginning of war, thanks to the educational propaganda based on English experience, testimony was given at the conference of industrial exploitation in certain trades where women have already supplanted men called to the army.

James L. Gernon, first deputy commissioner of the New York State Department of Labor, emphasized over and over again that more men are on the market than are actually needed for all open positions at this time. Nevertheless, he said, about 2,000 women have replaced men workers. In one plant about 300 women have taken the places of men; the Curtis Aeroplane Company has substituted 375 women for male employes, and another big firm 315 women; a shrapnel manufacturing company up state in New York put in 125 women. but there was so much opposition in the town by the unions that it was obliged to discharge a number. Mr. Gernon added that he did not believe the wages in most cases where women had been hired were the same as had been paid to men

Nelle Swartz, of the New York Committee on Women in Industry of the Advisory Commission of the Council of National Defense, described certain unusual fields of work which women have entered. Besides reporting on girl messengers, she spoke particularly of the women on transportation lines and of the hundreds of women employed throughout the state as elevator runners, both of whom are under no legal protection. Many of the latter work twelve and thirteen hours a day, seven days a week -one was found who had remained in her steel cage for ninety hours. In addition to the physical strain of long hours they often work at night and are exposed to the insults of drunken occupants of apartments coming home late. Their wages vary from \$30 to \$40 a month. Women car conductors, according to Miss Swartz, are also working long hours, and, as railway officials are beginning to regard women as the one stable unit left in the labor market and to draw upon them in increasing numbers, their condition should be given special attention. The Committee on Industry is about to issue a report on the subject of women car conductors and later will publish the results of a study of the war industries of Long Island City with particular reference to the employment of women on government contracte

To arouse women in these new occupations to any particular interest in their industrial welfare is difficult, because they are so much better paid than they have ever been before. Drawn from trades where they have been getting \$9 and \$10 a week, they are now earning \$19 and \$20 a week. "From my experience since the outbreak of war," declared Miss Swartz, "the challenge to all of us is to get the worker to appreciate not only the necessity of a living wage for her as an individual, but the relation of her earnings to her fellow workers, both men and women; in other words, to create a group consciousness among wage-earning women."

The conference at its closing session accepted this challenge. From among the sixty delegates attending, who represented the unions of New York in which women are members, a permanent committee of ten was elected to cooperate with the Woman's Trade Union League in maintaining labor standards, to agitate among these women substitutes and to educate them in regard to the dangers of undercutting male labor. The committee will work actively for the eight-hour bill for women which the league will have introduced at this session of the legislature.

The bill provides that no male minor and no woman shall be employed in any factory for more than eight hours in any one day (except to make a short working day in any one week) or for more than forty-eight hours in any one week

### THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

#### FFV

If you know the name of the agency or organisation, turn direct to the listings (3d column) for address, corresponding officer, etc. [They are arranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject clas-sifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required charges. Membership is not required of those seeking information, but of-fers an opportunity for you to share spiritedly and seriously in your com-munity or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the Survey, and we shall en-deavor to get your inquiry into the right hands.

### WARTIME SERVICE

"HOW the Survey can serve" mal conference held early in April, in mat conference need early in repril, in our library, to which we asked the executives of perhaps twenty national social service organizations. The con-ference was a unit in feeling that as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the SURVEY was at the threshold of an opportunity for service such as has seldom come to an educational enter-

The development of this directory is The development of this directory is one of several steps in carrying out this commission. The executives of these organizations will answer questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands

Listings \$3 e month for card of five lines (including one listing in SUBJECT INDEX by full name and three by initials), fifty cents e month for each edditional line. No contracts fir less than three months. Additional charge of \$1 for each change of copy during three-month period.

# A New Industrial Revolution in England

By Bruno Lasker

HE introduction of steam power in manufacture had so marked an effect upon the development of industry a hundred years ago and gave so predominant a direction to the social and economic history of the nineteenth century that with it there has come to be popularly associated the name of the Industrial Revolution. Of course, the possible uses of steam power were well known before that time. But it required a pressing, universal demand for higher industrial productivity to cause the rapid development of steam power for manufacturing uses; and this demand was created by a prolonged and costly war which threatened to burden the country with unbearably heavy taxation.

Is it merely a coincidence that today, under similar political and economic circumstances, there is again arising in England a new mastery over the sources of mechanical power, promising within the next half century or so to transform once more the processes of production and to give an entirely new trend to social progress? I do not assert that history repeats herself. Indeed, the outlook would hardly be a pleasant one if we had to contemplate a new stimulus to manufacturing efficiency which brought back that period's subserviency of the common weal-and of common sense-to the worship of productivity. Only too slowly are the civilized nations emerging from it even now. The significance of the present movement, on the contrary, lies in the fact that it is leading away from the evils of nineteenth century industrialism towards a fitter and nobler form of economic organization.

Many influences conduced, in the Industrial Revolution, to produce the deplorable social conditions which came with it. Today, other influences, whether aided by mechanical invention or not, tend in the opposite direction and are bound to effect social changes for the better. It is not my purpose to review them here, but rather to point out how they are going to be focused and accelerated by a new control over mechanical power, just as the tendencies towards exploitation, social disintegration and the emergence of an unscrupulous capitalist class a hundred years ago were favored by the introduction of a new power.

The occasion for these reflections is the issue of a report by the sub-committee on coal conservation of the British Ministry of Munitions. The chairman of this committee is Lord Haldane, and the report, though largely technical in character, shows the imprint of bis humanitarian liberalism. It is about as different from the parliamentary documents on similar subjects of a hundred years ago as such a report well could be. Though appointed to investigate possibilities of economizing fuel for industrial purposes and conserving the nation's coal supply generally, the committee came to conclusions of immeasurably where social importance.

For long, certain economists and engineers have held the view that the transference of motive power from the mines to the industries by transporting the raw coal, often over long distances, was wasteful and hindered healthy industrial development. We need not delve into the history of modern industry for proof of this statement. The present situation in the eastern states of the United States is an excellent instance. It shows that this clumsy means of provisioning manufacturing establishments with one of their prime necessaries in no longer in keeping with present-day requirements and may easily in an emergency lead to national paralysis.

The iron and steel industries of the modern world, upon which the progress of all the other industries depends to a much larger extent than is sometimes realized, have been developed almost entirely on and around the principal coal fields. Although it may be said that the growth of the textile industries preceded or at any rate coincided with that of the metal industries, it is clear that the revolution of processes which made possible that growth could not have taken place without the simultaneous revolution of processes in the making of machinery. Thus, the concentration of populations in large cities, the factory employment of women and children and the consequent lowering of the remuneration and status of the male laborer, the "dilution" of skilled labor which is still proceeding, the rise of a capitalist class on the one hand and of an urban proletariat on the other, just to mention some of the chief phases of the Industrial Revolution, can be traced directly to the introduction of steam power.

Now, Lord Haldane and his associates produce a feasible plan for undoing, so far as it can be undone, much of the mischief created by the period of steam power. Briefly, their proposal is for the supply of British industry with electric power, generated for the whole country at not more than sixteen big super-power stations, and the elimination of all smaller stations. They estimate that this would save 55 .-000,000 out of the 80,000,000 tons of coal used in the United Kingdom for producing power. The cost of this 80,-000,000 tons at the pit head is about \$200,000,000, and of this \$135,000,000 could be saved. An even greater economy, estimated in the report at about \$400,000,000 annually, could be effected by saving the by-products wasted by burning bituminous coal, as is now the universal custom in Great Britain, in open grates. The coal now used, employed economically, would produce three times the present amount of power and heat.

On the northeast coast, where already the power companies are served from a single connected system, the price of electric power per unit is from one-half to one-quarter that paid in Lancashire, which has a much denser population and uses three times as much electric power per head. At present, the supply of electricity in Great Britain is parcelled out among some six hundred private and municipal undertakings with an average generating capacity of only 5,000 horsepower. The proposal is that all these plants be fed by main trunk lines from sixteen stations with generating machines of not less than 20,000 horsepower each and, in some industrial districts of 50,000 horsepower.

The relation of cheaper and more abundant power to higher wages need hardly be emphasized. "The best cure for low wages," says the committee. "is more motive power." Increase the net output per worker, and you increase the net carrings which it is possible for industry to pay him. The substitution of cheaper for more expensive power, and that of mechanical for human power, is equivalent to an improvement of the machine itself, so far as economy of output is concerned. It does not follow, of course, that this economy must go in higher wages. But a considerable rise in wages cannot be permanently secured except where such an economy takes place.

So far the industrial side of the plan. Its direct bearing on the position of labor in the United States must be obvious. To what extent the greater average productivity of the American workman is due to the greater amount of power used per head cannot be ascertained with absolute certainty because of the complex nature of other factors entering into such a comparison. But such comparative studies as have been made of individual industries seem to point to this as an important reason for the higher average productivity of the American worker and for his higher wage. It is clear, in any case, that a considerable increase in the productivity of British labor must inevitably strengthen its competitive position in the markets of the world.

But the industrial economies suggested by Lord Haldane's plans are only one part of the story. The cheapening of electric power will, in the more progressive communities, give an impetus to the development and improvement of public services; it will make it possible, more particularly, to carry through extensions of transportation facilities which now would not pay, thus helping building enterprise in outlying districts and the decentralization of large cities.

On this point, many recent investigations of housing conditions have supplied irrefutable evidence. They have shown that the absence of adequate trolley services is forcing industrial workers to live in cities and congested suburbs, enclosing them as it were with a wall as real as the stone walls of mediaval towns, and throwing millions annually into the laps of grasping landlords. For, without a wide choice of available building land, an enormous unearned increment is piled up for those who happen to hold land within these economic walls. The further development of municipal an inter-urban railroads, in England as elsewhere, has been held back by the simple fact that during the period of extension such services are unremunerative while all the plums, in the shape of increased suburban and rural land values, go to those who have done nothing to create them.

Astonishing changes are predicted by experts on this subject for the application of cheap electric power to agriculture. At the request of the development commissioners, fifty acres of land have been placed under electro-culture on a farm at Hereford. The chief purpose of the use of power is to counteract the retarding influence of dull days on growth. By splitting up the ions from the atmosphere, the abstraction of nitrogen by the plant is aided. W. J. Kerr, an engineer prominently associated with this experiment, is of opinion that with the application of electric culture England can be made entirely est-supporting in the matter of food; the cost of electric current is the principal factor which determines whether cultivation on these lines will really nav.

The elimination of factory chimneys and of the smoke nuisance, electrification of railroads, even for freight trains, electric light for all classes, a cheapened telephone system linking up country and town, all contemplated by the committee as natural results of the adoption of their plan, will make for a social betterment more far reaching than a decade of legislative enactures.

Of course, I am well aware that in the United States, in Canada, Sweden, Switzerland and other countries there are examples of industrial districts supplied entirely with electric power from one source, and that the conditions in these communities are not necessarily idyllic. But, as a matter of fact, so far as environmental conditions are concerned, these towns and cities are much better places to live in than those without a cheap supply of electric power. Moreover, nowhere in this country has centrally generated electricity really been cheapened to such extent, in comparison with the cost of power from steam or local generation, and with the cost of fuel for heating, as is now proposed for England.

It is, perhaps, difficult for Americans to realize what the present method of heating and generating power by the burning of bituminous coal in millions of open grates and small chimneys has meant to England in ill-health, depression, dirt and discomfort. The smoke which belches forth daily from every home and every factory poisons the atmosphere not only in the large cities, but, as Ruskin observed in his home on Coniston Lake, over distances of hundreds of miles. Only western Pennsylvania has conditions at all similar to show. Already, this country has in use over twelve times as many telephones as the United Kingdom although its population is less than three times as great. I do not contend that the increased use of electric power to be anticipated from the adoption of Lord Haldane's plan will create a sort of earthly paradise in England, but I do foresee that it will bring conditions of life and labor in that country measurably nearer -will in some respects perhaps carry them beyond-the superior degree of comfort, cleanliness and well-being enjoyed by Americans.

There is yet another aspect of the plan which will emerge more slowly, but with even more remarkable permanent consequences. I am referring to the degree of industrial decentralization which a cheap supply of electric power will make possible. This has been pointed out forcibly in the writings of Prince Kropotkin and others who, for long, have denied that the present concentration of industrial operations in huge plants is either an ideal or a necessary condition of efficient production for the higher branches of industry. The supply of power is only one of a number of factors which determine the location of industries and the size of individual enterprises. Usually, the supply of labor is looked upon as the most important factor so far as location is concerned. But the history of the nineteenth century has shown that, over long periods, labor is more fluid than other elements. Even now, the United States are experiencing a migration of Negro laborers which would make ridiculous any assertion to the effect that our new war industries must move south in order to have accessible a large supply of labor. Nearness to the eastern ports and, above all, accessibility to supplies of materials and of mechanical power, have in fact determined the location of these new industries.

The distribution of power from a few generating stations situated at strategic points will make possible in England a decentralization of industries which is bound, within a few decades, to transform the economic geography of that country. It will remove the political and social, as well as the economic barriers between what are at present purely industrial and purely rural regions. While climatic conditions probably will to a large extent retain the textile industries in Lancashire and in the West Riding of Yorkshire, there is no reason why other subsidiary and independent industries should remain territorially so closely associated with them or with the mine fields.

Again, other factors apart which we have not space to discuss here, the advantages enjoyed by large enterprises in many branches of industry will disappear. There will be a revival of small industries, located where conditions are most favorable for any reasons but spread over wide areas owing to cheaper transportation and cheaper power. This revival is, perhaps, the most important of all the ultimate results of the Haldane plan which can now be foreseen. Smaller industrial units, no longer huddled in close proximity to the sources of power, surrounded by pleasant small towns or garden villages, will make for a health and happiness—and, thereby, for an increase also in industrial efficiency—unknown even in the most progressively administered large manufacturing cities.

There will be a new impetus to inventiveness and the application of skill and taste. The small factory or workshop, turning out products of individual design and craftsmanship, will facilitate the education and self-development of the workman and make for more healthy relations between employer and employed. The new possibility of securing power and transportation cheaply will give a hope and ambition to the small man now stifled by the superior advantages in these respects which the big concern enjoys. With the better prospect of the skilled artisan to secure economic independence, a new element will enter into the relations between capital and labor. The smaller industrial unit, while in itself it will not bridge over class differences, cannot fall to make for a more harmonious and contented social life.

In making these anticipations, I am not unmindful of the fact that, after all, the vistas opened up by the Haldane report are possibilities rather than certainties. Other factors of vast importance, of course, enter to modify and redirect these tendencies. So long as the trend towards concentration of capital, for instance, persists through inequitable taxation, the private exploitation of natural monopolies and other causes, the decentralizing influence of cheaper power and cheaper transportation will remain largely inoperative. But these factors are not static either. There is much evidence that in England as elsewhere the war has produced an atmosphere not only favorable to momentous readjustments in these respects, but almost forcing them upon society for the sake of national security. While social efficiency may require an even greater concentration of basic industries than any experienced outside the United State, the higher industries, all those requiring individual exercise of inventiveness, skill and taste, are indeed, so far as England is concerned, at the opening of a new era.

## HOME SERVICE

# The WORK of the AMERICAN RED CROSS in the UNITED STATES

By W. Frank Persons

DIRECTOR GENERAL CIVILIAN RELIEF

NE of the most concrete and practical tasks of Home Service is the giving of accurate and timely information to the families, relatives and friends of soldiers and sailors. In order that this information service may be undertaken promptly by every chapter according to a uniform and thorough plan, the Department of Civilian Relief is publishing this week its Handbook of Information for Home Service Sections. When this substantial pamphlet of 112 pages is placed in the hands of Home Service workers in each of the ten thousand chapters and branches of the Red Cross every community will have a guide for the wide range of every-day practical inquiries from anxious folks at home regarding the welfare and interests of men in the

army and navy and of their families. Plans have been made for a constant supply of supplemental leaflets to keep these local information centers abreast of the latest news and developments.

The relatives of enlisted men desire information of many kinds. Already this service is widely extended. Home Service sections are advising how mail should be addressed to soldiers and sailors; how information may be obtained of those sick, wounded, captured or missing; what the war risk insurance law means and how to take advantage of its provisions. This work will be more uniformly provided and its scope widened. The new handbook will facilitate the conduct of this information service and assure to the families of our fighting men prompt and helpful attention. There is nothing that the Red Cross can do that will appeal more quickly to business men and practical-minded people generally than this simple, untechnical, common-sense form of help. The number of such people already members of Home Service sections will increase, assuring the proper organization and conduct of this work during its sertain racide growth.

Each Home Service section has in this work a twofold opportunity: First, to save untold anxiety and suffering. Sympathetic, prompt and accurate information, quieting fears, relieving anxiety, and encouraging self-help, will serve materialby to maintain the comfort and health of these families, who have spared their bread-winners and protectors to the service of their country, and thereby also to sustain the morale of the fighting men themselves. Second, the giving of such information will be the most natural means to establish acquaintance and confidence between the Home Service worker and the family. It is apparent that, when members of families come seeking these separate items of fact, there will be chances for quiet, personal talks which will lead, frequently, to opportunities of serving them in other and even more important was

#### Conservation by Service

THESE opportunities for Home Service have already been set forth in detail in this series of articles and need only be summarized here. Briefly they are as follows: (1) conservation by iervice of human resources wherever deterioration is threatened in the soldier's or sailor's home; (2) temporary relief of families in which there has been delay in payments, or in which there has nemergency; (3) responsibility for regular and continued assistance in cases not covered by government allowance (this includes families in need and resident in the United States of men who are in the service of our allies); (4) personal services to the returned soldier or sailor, especially when he is disabled; (5) the advancement of home standards wherever possible, but especially when the lack of help is likely to cause family disintegration!

The immediate occasion for the publication of the Manual of Information Service was the need of rapid spread of accurate understanding of rights and privileges under the war risk insurance law of October 6, 1917. It is of great importance that all relatives of soldiers and sailors should fully understand the practical bearings of this law relating to family allowances, allotments, compensation for injury and death, and insurance. Accordingly, the Department of Civilian Relief early in October, 1917, urged upon Home Service sections that this matter be given thorough attention.

That the help of the Home Service sections is appreciated

and desired is made evident by a letter dated December 27, 1917, written by William C. De Lanoy, director of the Bureau of War Risk Insurance, from which the following para-

graphs may be quoted:

"I am informed that there has been established a Home Service section in all of the Red Cross chapters throughout the country. This Home Service appears to be admirably adapted to fill an existing need as a conveyor of information and advice to the dependents of the American soldiers and sailors respecting the operation of the act of October 6, 1917.

"Nothing could be more essential to the maintenance of the morale of our fighting forces than the belief by the soldiers and sailors that their dependents are being cared for. To accomplish this it is necessary, not only that the men in the army and navy receive full information, but also that dependent wives, mothers, parents and children be apprised of their rights and the means of securing them. In disseminating this information and giving such advice no organization that I know of has greater potentiality for service than the American Red Cross."

In the spirit of this understanding with the War Risk Insurance Bureau, all Home Service sections are urged to give earnest and effective attention to this important opportunity for invaluable service.

One chapter of the handbook is devoted to a thorough but simple statement of the provisions relating to allotments and allowances to families, to compensation for injury and death, and to insurance.

In addition, there will be found information on such related subjects as allotment of pay by officers, marine and seamen's insurance, insurance for crews on army transports, and the pay, allowances, allotments and compensation of soldiers in the armies of the allies of the United States.

The handbook also contains information about work with families in their own homes, supplementing or emphasizing that found in the Manual of Home Service (A R C 201, second edition); on how to verify enlistments and to send mail to soldiers and sailors; and on training course for Home Service workers. In the appendix will be found tabulated information and directories which it is believed will be useful for ready reference.

The material contained in the handbook has been divided into five chapters, in addition to the appendix, and arranged in numbered paragraphs. Each paragraph is introduced by its topic. A table of contents giving paragraph topics, precedes the text, and a topical index follows the appendix. The references in the table of contents are to pages. The references in the appendix and in the topical index are to paragraph numbers and not to pages. Cross references have been generously used both in the text and in the appendix.

Several suggestions concerning organizations and effective methods for the use of Home Service sections are offered in the introductory statement. Emphasis is given to the statement that information must be absolutely correct and clear and that it must be given with directness but graciousness. Workers are urged to remember that under no circumstances should impatience be shown, however unusual the question or the manner of asking may be. These inquirers bring to the Home Service section questions and difficulties of momentous importance to them. They will often be diffident or uncertain of the reception they are to receive. They may be embarrassed by the necessity of revealing personal feelings. They are certain to be favorably impressed by sympathy and serious attention, and thereby persuaded to ask fully and freely for the help they may need. The information is not more important than the manner in which it is given. This information service, therefore, will be in the hands of members of the Home Service section who have poise, discretion and sympathy; and preferably of those who have done other Home Service work, and so know, themselves, the real experiences of the families of soldiers and sailors.

#### Questions in Crescendo

THE proper conduct of a useful information service involves having an accessible place and scrupulously kept office hours with some one or more persons regularly in attendance who are fully informed and free enough from other duties to give cordial and considerate attention to each questioner.

Many questions at first will center around the details of service pay, of allotments from pay, and of family allowances from the government. Later will come queries about communicating with men in the service abroad, sending them packages, and so on. Later still will come the acute anxiety of those who after a battle, fear the worst and are seeking fuller details than official announcements have yet given.

This desk and reference book is offered to Home Service workers and to others now in intimate, helpful relations to soldiers and sailors and their families, with full knowledge that it does not contain all the information that will be needed about the subjects included. It is, of course, not possible to anticipate all the questions that will arise concerning them.

It is believed, however, that the Red Cross by this publication has fulfilled a purpose peculiarly appropriate to its duty as the civilian auxiliary of the army and navy. It is hoped that Home Service workers will utilize this source of information rather than add to the growing piles of letters which government bureaus must answer each day, and thus lighten their burdens as well as those that rest on the hearts of lonely families.

# A Cleveland Plan for Financing House Building

By John Ihlder

EXECUTIVE SECRETARY PHILADELPHIA HOUSING ASSOCIATION

LEVELAND in the Middle West, like Philadelphia and Newark in the East, is illustrating the fact that even a large city may be given so much in the way of new business that it finds difficulty in assimilating it. In Cleveland, as in Philadelphia, there seems to have been comparatively little difficulty in expanding factories, but in both the unsolved problem is, how to house the extra workers for the expanded plants. For, as Paul L. Feissays, "You can't man the works unless you house the man."

Cleveland has been constructively interested in housing for many years. Since 1902 its Chamber of Commerce has had a Housing Committee, and for a considerable part of that time Mr. Feiss has been chairman of the committee. Mr. Feiss's interest is practical. He is a large employer and he sees the relation between good housing and good workmen. He sees other things, too, but that he keeps constantly in view. Under his leadership the committee has done a great deal to improve housing in Cleveland. It has aided in the enactment of a housing law and has supported the enforcement of that law. But Cleveland needs more than regulation. It is growing rapidly. Its annual increment is some 20,000 persons. For several years the Housing Committee has felt that adequate provision is not being made for all these newcomers. So it has sought in several ways to stimulate the production of good, inexpensive houses. With our participation in the war the industries of Cleveland boomed, while, as in other cities, the building of houses slumped. The situation became acute. In Mr. Feiss's words in a recent report: "We are confronted in Cleveland with the question as to whether industry can possibly expand unless industry also concerns itself directly with the problems of housing the additional workers needed for such growth."

The Housing Committee had in previous years worked out a plan for municipal participation in a housing development that never materialized; it had experimented with inexpensive methods of contruction. But in the crisis that faced the city last fall the great need seemed to be for a very large amount of capital immediately available, so that existing householding agencies might be stimulated to maximum production. At that time the city was said to be 10,000 houses and apartments short of its need, while the expanding industries were calling for more workers, and the workers, after a vain search for shelter, were leaving town.

The committee therefore set itself the task of financing housing on a large scale. It found that one of the important factors in the cost of houses is the long period during which the builder's capital is tied up in his operation. By reducing

this period from five or eight years to one or two years, i. e., releasing the capital as soon as the house is completed, the cost might be reduced 10 per cent, or \$300 on a \$3,000 house, and the capital at once put into the construction of a new house. In addition to the profit earned by increasing the speed of capital turn-over, the committee believed it could also reduce the cost of financing mortgages.

To do this the committee decided to form a corporation to finance the purchasing of houses, but not to do the building. In addition to the 10 per cent due to immediate purchase, this corporation would earn a 3 per cent commission for making the sale and another commission for placing fire insurance, making in all, according to its figures, \$400 on a \$3,000 transaction. It was proposed that the dividends of the corporation be limited to 6 per cent and the balance of its profits be distributed to home buyers as deferred dividends similar to those on life insurance policies. The crux of the whole project lay in the possibility of its producing a very large amount of cash capital to be used in purchasing houses. This was to be done as follows: The purchase price, minus \$300 to be paid by the individual home buyer, was to be covered by a mortgage. This mortgage was to be deposited with a trust company as security and against it would be issued collateral trust notes in convenient denominations to be sold through the usual channels and to bear current rates of interest. In this way the capital would remain liquid and available for further use.

While this interesting plan would have had a greater appeal before the war made not only capital but also labor and materials high and scarce, there are two points in it that call for notice. One is that the house buyer must put down \$300 cash, the other that the interest is to be only 6 per cent. The first would shut out the great army of low-paid workers. The second made the investment unattractive unless its security were demonstrated, or unless it could be made either a necessary side issue to business expansion or a business-plusphilanthropy venture. The latter the committee definitelyand rightly-eschewed. The former they quite as definitely avowed. "In the case of such employers as desire to have direct contact with their own employes it would be quite possible to arrange it by making the employer directly responsible for the individual loan. It would seem better, however, not to stimulate this direct relationship any more than is required by individual and special needs, but to make this a community movement as far as possible. This idea need not prevent a corporation from placing a lump sum into the hands of the company for the development of a specific projectpossibly one adjacent or convenient to a particular plant."

The desire here expressed "to make this a community movement," is the only point that distinguishes it from a movement to incite a number of firms to repeat the old and little successful experiment of owning the homes of their employes. Unfortunately the desire does not lead further to a statement that company ownership should be but a passing phase of the movement, necessary, perhaps, in securing the initial capital, even necessary constantly in developing new and isolated areas not vet accessible to the city and to other industries, but of constantly diminishing relative importance. Unfortunately, too, it does not make any definite provision for the wage-earner's participation as a capitalist. With "notes in convenient denominations" he might be persuaded to buy into a cornoration that is designed to provide him with a home. And in some of our busiest districts today he is the man with the ready cash.

It is now three months since Mr. Feiss made his proposal before the Cleveland Chamber of Commerce and, so far as I have heard, it has not been followed up. I did see, a day or two ago, however, that Cleveland is undertaking another survey of its resources for house building. If Cleveland is like Philadelphia, the rapid march of events, the need for every available dollar in plants and equipment that pay more than 6 per cent, the persuasive power of liberty bonds, has dried up the sources from which Mr. Feiss hoped to finance his corporation, while the increasing cost and scarcity of labor and material has made even the promise of cheap government money seem rather an ungentle irony to those who a year ago thought it would provide a broad and easy way out of our difficulty.

For the time being, at least, it looks as if the government, having undertaken so much, must undertake more. For it alone can say in how much the shipyards, the munitions plants and other government enterprises must abate their demands for men and lumber and sand, in order that houses may be built so that men may be had to work in the shipyards and munitions plants.

Cleveland itself is a straining hive of industry these days, but it is said that there are places in the Middle West where work is slack. Perhaps, more fortunate than the Philadelphia district, that about Cleveland contains an ample supply of materials for house building which have not been allotted to "essential", industries. In that case Cleveland may work out its salvation.

## Factory Classes Essential for Americanization

### By Helen Winkler

DEPARTMENT OF IMMIGRANT AID, THE COUNCIL OF JEWISH WOMEN

OU are no doubt familiar with that nice copy-book sentiment that little beginnings lead to great endings. Certainly the truth of this is borne out by a recent development of the work of the Department of Immigrant Aid of the Council of Jewish Women. The department extends its protective work among Jewish girls and women, helping them on toward becoming good American citizens. Establishing contact with them even before admission at the ports of entry, the department maintains this contact long after, by means of follow-up work done by the branches and, where there are no branches, by our special investigator.

Such follow-up work, begun six months ago by the special investigator, disclosed housing, literacy and working conditions in about six large industrial centers in New Jersey of which we found the respective communities quite unaware. New Tersey's industries are largely recruited from among women and girls; 70 per cent of the workers in one of its largest cities are women and girls. The shifting of labor occasioned by war emergency has prompted us to study intensively the conditions which surround the Jewish arrivals and consequently the immigrants of all nationalities, since what is true of the lewish foreign group is true of all foreign groups, with some modifications. Like the philosophic fly on the wall, we have made our discoveries step by step. The result of these investigations we laid before the respective Jewish communities, the boards of education and, in several instances, the boards of trade and individual employers.

Our work has brought to a focus the facts that: (1) Living conditions are not as they should be. (2) Industrial conditions are not as they should be. (3) The amount of illiteracy is out of all proportion to the board of education efforts and to the propaganda made by all organizations on literacy and

Americanization. We did not presume to do their communal housecleaning for them; we merely offered them the fruits of our discovery. But we made another discovery—that people get stirred up more quickly than they get to working. Over questions of priority, of class prejudices and prerogatives, the community remained dvided.

Our work in this connection has made the communities conscious of the living and other conditions of the Jewsh immigrants in their midst, the most recent of whom are the Spanish Jews from Greece, Our investigator, establishing friendly contacts with the girls on her visits, and through the factory where she worked side by side with them, discovered that overcrowding was the rule, that dirt, the concomitant of low earnings, was all too prevalent. More specifically, she found eight people in two rooms, some sleeping on the floor for lack of enough beds. In this town the recent immigrant group was set apart from the rest of the Jewish community by the lack of a common language, since the Sephardic Jews do not speak Yiddish. In other cities, where the immigrants have been here longer, the progress toward American standards has been more marked, yet they too are the victims of the conditions into which they are drawn. The part of the town occupied by the Jewish factory population has almost primitive housing conditions. Bath-tubs and even wash-tubs are conspicuous by their absence, the two-floor wooden tenements are dark and unsanitary fire-traps.

Slumming having gone out of fashion, the more prosperous knew only that things were bad, or they wondered how the poor could get along with the present prices. They cannot. There has, of course, been a rise in wages since the war, but the rise in the cost of living is out of all proportion to that in wages. The effect of this disproportion has been to draft every available member of the family into the ranks of wagecarners. "He'd love to go to high school and his teacher says he's smart, but how can I afford to let him go?" rells the frequent tale. Tomorrow's bread and coffee is the price of an education.

And so the Jewish girl or boy turns to the factory. But in the case of the recent arrival, the woman or girl goes immediately to the factory, into the industries with which her friends or relatives are acquainted. She helps to swell the shifting ranks of the unskilled, regular and emergency trades, barred by her environment and ignorance of conditions and of the language from other work. One finds the Jewish foreign girl (many still foreign, though here perhaps twelve years) in cigar trades, in surgical dressings, in rubber factories and in the needle trades in New Jersey. The reader is probably aware of the fact that New Jersey has a ten-hour day, that is, sixty hours a week. This means more than sixty hours, because the piece-worker does not take more than one-half hour for lunch. One can safely estimate the working week at sixty-three hours, especially in the emergency occupations, while fifty-five hours is occasionally found. The day is long and the work is monotonous, unskilled and fatiguing. Putting bandages in cartons, or cover-seaming endless sleeves, or even making bunches for cigars develops little mental faculty, but it has the positive result of using up the girl's physical energy and consequently of dulling her ambition.

The large number of unskilled occupations is a condition of the subdivision of labor. But we must teal with its effects, the most prominent of which is illiteracy. In one of the cigar factories investigated by us—and the cigar trade draws a large proportion of foreign girls and women, Polish, Hungarian and Italian as well as Jewish—90 per cent of the workers were un-Americanized and illiterate. And in a hosiery factory, where 80 per cent of the workers were American, only about one-eighth had gone as far as the seventh grade in school, surely giving a very ininimum of literacy.

How is this condition of un-Americanization and illiteracy to be met? Who is going to remedy it? You say it's the business of the night schools. But how successful can the night school be when it gets the girl after ten or more hours of exhausting work? One of the teachers said that when he finds his pupils nodding, he says "Let them sleep." But under the circumstances one neither sleeps well nor learns well. Aside from the length of the working day in New Jersey, there is the fact that the girl needs the evenings for ironing, washing, or other household work, if not for amusement and recreation.

Clearly, the night school does not and cannot fulfil the task, and this in spite of the drive for Americanization which is being made. That it does not is shown by the market falling off in the registration. Five of the New Jersey night school principals with whom we have conferred have noted with dismay the marked decrease in registration and the falling off in attendance among those who have registred. Registration is about one-fifth this year of what it was four years ago. There is an appreciable difference, also, between the registration of last year and of this year, the latter being about four-fifths of the former.

The intimate relationship between living, working and

literacy conditions of the foreign population shows that the question of literacy is properly a factory question, a problem for the employer. In this is bound up his patriotic sentiment, as well as his intelligent self-interest. The far-seeing employer soon realizes that a literate labor force is an asset, and that it is much to his interest to make it so. A common language reduces friction between employers, and between employer and employes; the labor turnover is much smaller where the employes are literate and Americanized; there is a money gain in the reduction of accidents. America as well as the employer is the gainer by the reduction of illiteracy in the shop.

Take, for instance, Detroit, an inspiring example of what team work in a city can accomplish. United, non-partisan action on the part of every employer cooperating with the board of education has transformed a city which was threatened with becoming one of the most foreign cities into one of the most American cities. Cooperation between the board of trade in the way of factory schools and the personal interest of employers in the Americanization of their foreign laborers has done this. Of course, the problem was more centralized in Detroit than it is in New Jersey, because Detroit's industries are not diversified, and because the industries employ chiefly men. In the night schools alone, the registration in 1915 increased 153 per cent over the previous record. The employers of Detroit, many of them, predict the giving up of the night school method of teaching and the establishment in every factory of factory schools. Detroit is now a city of citizens, where the percentage of citizenship has increased to a considerable extent, where labor friction is reduced to a minimum and labor conditions are of a high standard in spite of the almost total absence of labor unions. The education of labor was not left to the trade union, but, prompted by patriotism and enlightened self-interest, was undertaken by the employers and the civic bodies.

To meet the great divergence between what is needed in the education of the foreign worker and what is accomplished by the night schools we must have a concerted civic effort to undertake this problem on broad and effective lines, through the proper channels. The factory, which holds the worker so many hours of his life, is the chief place in which he can make his educational as well as his social and economic contacts. To leave this problem to the limited reach of the night schools is a waste of effort. The only method is that of a concerted drive on the part of all organizations, industrial and civic, to get the worker at the source, that is, in the factory.

One of the reasons why the night school is inadequate to cope with the problem of the illiteracy of the foreign adult worker is that it does not weave his education about his work, his chief interest. But the board of education can perform a most important function by combining with the factory. Cooperation between school and factory is the keynote of success in this problem. Through the continuation and factory schools the board of education will supply in a much more effective way what it fails to, because of the circumstances, in the night school. Since the mountain work come to Mahomet, Mahomet must come to the mountain—the school must go to the factory to reach the worker.

## A TRIAL AT UNEMPLOYMENT

SO far as reports have come to the Surary there are few indications that the wage burden of the recent fiveday shut down and embargo on the use of fuel in the eastern half of the United States will be borne by the industries. Some of the largest employers, such as the United States States will be store by the industries. However, announced that wages will not be paid for the period of the suspension, and other employers will doubtless follows suit.

Dr. Garfield sent the following telegram to all state fuel administrators: "Will you kindly give public expression of my appreciation of public-spirited and patriotic action of employers in the state who may determine to pay the wages of their employes during the suspension period specified in the regulation of January 17? They are bearing their share of the sacrifice which we are all called upon to make to the common good."

It is obvious that great suffering will result, especially among the lower paid wage-earners. At the time of going to press, there had been no marked increase in applications to the relief societies in New York for aid, but it was pointed out that in the days of idleness the worker still had on hand the wages that they had earned the previous week. The test will come this week, when the effects of the shut-down will show in their pay envelopes.

Settlement workers in New York and others familiar with conditions on the East Side said that the suffering there would in all probability be very intense when the full effect of the wage loss is felt. So many there are on the border line, living up to the limit of their income every day, that the loss of even one dav's pay—much more, five days'—will be sufficient to bring them face to face with absolute want.

'The employment agencies in New York practically suspended operations during that period, for no one but hotels and hospitals were hiring labor. There was no marked increase in the number 464 of applicants for positions, although it had been feared that workers generally would take advantage of the opportunity to try to secure other positions wherever there was any hope of improvement and that the labor turnover in factories, already extremely high, would go still higher, and that general confusion would result.

While the trade unionists have accepted the order with as good grace as possible, there has been a great amount of dissatisfaction, some of which has been very vigorously expressed. The trade unionists of Boston adopted a resolution calling for the deposing of Dr. Garfield as fuel administrator. In an interview given out directly after the order had been announced, Samuel Gompers said that the workers "would maintain their loval stand despite the suffering and sacrifices which they may be called upon to bear." He expressed the opinion, however, that "a wiser and more practical course would have been to place the industries on an eight-hour basis for the period of the war."

Mother Jones said at the Mine Workers' convention, now in session in Indianapolis: "There is no shortage of coal, but of common sense. The workers are willing to dig seven days and nights a week if necessary. Give 'em the cars. I have conducted little personal sight-seeing trips, and I final plenty of cars and coal if they'd only move 'em."

#### STANDARDIZING GOVERN-MENT LABOR POLICIES

HE action of Secretary William B. Wilson of the United States Department of Labor, in appointing an advisory council of seven persons to advise and cooperate with the Department of Labor, accomplishes in effect one of the recommendations in the report of John R. Commons, for the United States Commission on Industrial Relations, made in 1915. In his report, which was signed by five of the nine commissioners. Professor Commons laid it down as a matter of fundamental import that in all work of the Department of Labor where controversy could possibly arise, there should be an advisory body of representatives of employers and employes to consider, and express an opinion concerning, every act of the department.

The Advisory Council just appointed consists of two representatives of employers and three representatives of employes. Agnes Nestor, president of the Chicago Women's Trade Union League, is announced as the representative of women, but since the women whom she represents are necessarily wage-earners, she is, of course, the representative of the employes, equally with John B. Lennon, for twenty-five years treasurer of the American Federation of Labor, and John J. Casev of Pennsylvania, a labor man who has served several terms in Congress. There are two representatives of employers, Waddill Catchings, president of the Sloss Sheffield Steel and Iron Company, Birmingham, and A. A. Landon of Buffalo, general manager of the American Radiator Company. Former Governor Lind of Minnesota, an attorney, is chairman of the council, and Prof. L. C. Marshall of the University of Chicago is a member. Representatives of the War, Navy and Agriculture Departments and the Shipping Board are to be added.

In the announcement of the new organization, it is stated that Secretary of Labor Wilson has "assumed the administration of a comprehensive war labor program." It is hoped that unity of action will result and all conflicts and duplication of machinery and effort in supplying war industries with labor will be eliminated. In further explanation of this new movement, the statement of the Department of Labor is as follows:

"The labor administrator and his advisory council will at once take in hand the questions of standardization of labor policies: the providing, distributing, and maintaining of a stable and adequate supply of workers; labor dilution and training, priority demands, the adjustment of disputes, and the safeguarding of employment, living, and housing conditions. The advisory council will study all phases of the problems, make recommendations and plans for additional machinery and supervise their execution. Because of the high standing and representative character of the advisory council the policies which it will formulate and execute are expected to receive the approval and support of employers, employes and the general public.

#### A BOLSHEVIKI CREW VISIT SEATTLE

IN December, a number of newspapers related a thrilling tale about a Bolsheviki ship which had arrived in Seat-tle. It was said that its crew had mutinied, that it was loaded with ammunition for the I. W. W., that it carried "booze," and that it had brough \$100,000 for the I. W. W. defense fund in Chicago. Some editors predicted that the ship would be interned. The Survey owes to Anna Louise Strong, of Seattle, the following account of the recal nature of that ship of adventure about which there has been so much speculation:

"Our Seattle papers," she writes, "covered front pages with excited news about the character of this vessel; and our local authorities, including some federal agents, placed a guard around it. Everyone who left was searched and every corner of the boat was hunted through for the alleged \$100,000. Finally, the immigration and customs authorities declared that everything in connection with the ship was quite regular and that she was an auxiliary cruiser of the Russian navy, sent over here with a regular cargo and expecting to take back hides and rails which had been arranged for by Kerensky."

There was, however, real news in the Shilka. She brought to this country the first example of the new industrial democracy in Russia. Dr. Strong found that she was managed by a crew committee which elects the mate and decides questions of food, wages, hours, etc. When, for instance, the cargo of rails and hides for which she had come was denied her because our government does not recognize the Bolsheviki, and she was offered a cargo of sele for Yoko-

hama, the crew as a whole voted on the question and decided to take it. Dr. Strong had an interview with the man who handled the bookkeeping for the

cargo.

He said that the crew was responsible to the Sailors' Council of Vladivostok, which in turn was responsible to a national council as well as to the Workmen's and Soldiers' Council of Vladivostok. The real revolution, he said, was not a question of what Petrograd wanted. Kerensky, Lenine, Trostsky were not mentioned in Russian papers as they are here. In Russia it was the "local councils," the "district councils," the decisions of the "peasants' council" of such and such a place that were talked should be a such as the such as the such and such a place that were talked should be a such as the such and such a place that were talked should be a such as the such and such a place that were talked should be a such as the such and such a place that were talked should be a such as the such and such a place that were talked should be a such as the such and such a place that were talked should be such as the such a

If Lenine were deposed, it would not make much difference to the revolution. The revolution. The revolution consisted in the taking over of the factories, ships, land, etc., by the persons working on them. Some places still had managers and a wage system; others had elected new managers; others were run by committees—there were all stages. Some councils of workers were Social Democrats, some Social Revolutionaries, some Anarchists; the theory did not matter, since they were all workers and stood for the "majority program," or the Bolsheviki.

When Lenine and Trotsky came into

When Lenine and Trotsky came into power, the crew of the Shilka held a ballot and decided practically unanimously to belong to the new government and turn over to it the returns from the ship. That was all there was to it. They even decided how much should go to the central government in Petrograd, how much to poor relief in Vladiwestok, and how much to the school system.

The Bolsheviki are not a political party, he explained, as parties are understood here, nor yet a labor union. As far as Dr. Strong could gather, they are an industrial delegate group with some political functions. They have varying political views, ranging from those of social democrats to those of anarchists.

When the business groups of Petrograd clamored for a strong war policy, the answer of the Workmen's Council was: "We believe in the utmost possible freedom. Those who say they want war shall go to the front immediately." The result was a marked cessation in the advocacy of war.

What the workers want of the central government is peace. They need it desperately. It took this sailor nearly two months to earn enough money to buy a pair of shoes. (His food and other clothes are furnished.) He said: "We have been over three years at war. Large numbers of people do not wear shoes any more. It was even worse just before the revolution than it is now".

Dr. Strong could not entirely discover how these different groups of self-

governing workers managed the exchange of raw materials and commodities. He said the local councils and district councils settled such things, but obviously this could only mean policy, not the details. In some places, he said, the peasants had brought their produce to town and turned it over without charge to the Workers' Council and had then received whatever there was in town in the way of clothing and implements that were not in use. But all this was difficult, because the war made everyone so very poor.

It is significant that while these Russians were finally given a dinner and an auto ride by the Seattle Chamber of Commerce "to smooth it over," as the sailor expressively remarked, they were followed by detectives when they went ashore and were forbidden to go to the I. W. W. hall, the Union of Russian Workers or any other radical place, or to speak at the public meeting which was arranged for them. The sailor told Dr. Strong that he did not think the capitalists of America wanted the working people to know the truth about Russia.

## PROTECTIVE OFFICERS FOR GIRLS WANTED

S OCIAL case workers, probation officers, women trained in social service—all are needed at once to meet the increasing opportunities for protective work for girls, already begun by the Commission on Training Camp Activities [see the Suavey for December 1, 1917]. There are at this hour more calls from communities for workers than the commission can meet. There is need for a protective bureau, properly staffed, in every extra-cantomment zoon.

The staff, called protective officers, must be women who can observe conditions on the streets; take back to their homes girls found loitering near camps; locate any missing girls and make investigations concerning them, and do all possible personal work with girls in these localities. They must know also how to observe what degree of obedience is being given to city ordinances affecting moving-picture houses and dance halls, the lighting of parks and streets, and the control of automobiles.

The work needs houses of detention and just the right women to take charge of them. It needs probation officers and policewomen who can approach the task from the angle of the courts and cooperate with the agencies for law enforcement. It needs women with hospital social service experience who can persuade the girls already infected with a venereal disease to accept immediate hospital treatment. And finally, it needs women who wish to be trained for such work.

The committee on protective work will offer in New York city next

summer a course of training similar to that given by Maude E. Miner at the New York School of Philanthropy last fall. Courses will be given in other cities, also, in order to train both workers and teachers of other workers. Application blanks and information may be had of Miss Miner, chairman, care of Commission on Training Camp Activities, 19th and G streets, Washington, D. C.

## RECONSTRUCTION AFTER

\*\*\*THE right to commit unlimited sabotage" is what employers and workers alike claim for themselves, according to Prof. Thorstein Veblen, of the University of Missouri, who spoke last week at the annual meeting of the National Institute of Social Sciences in New York city, on the subject Reconstruction after the War. Both employer and employe act in support of what each conceives to be his vested rights, said Professor Veblen. The result is two sets of "incompatible or mismated vested interests" and the resulting struggle works out as "a running campaign of sabotage."

This arrangement has about run its course; control of industry by business men in behalf of vested interest has, said Professor Veblen, "proven itself bankrupt." In the reconstruction to come after the war two things should be done. First, there should be no control of industry on the ground of ownership alone. Unless the owner is personally and directly engaged in carrying on the industry in question, his ownership should avail him nothing so far as power of direction is concerned. Second, any industry that has been so standardized and reached such a routine as to be "controlled from the office by the ordinary methods of accounting" should be publicly owned.

John B. Andrews, of the American Association for Labor Legislation, had three main planks in his after-war pro-The things of chief importance, he said, will be regularization of employment, which will involve an adequate system of public employment agencies, further extension of the principle of workmen's compensation, and the passage of health insurance legislation. These three things, designed to meet the most important hazards of employment, will be especially necessary, Dr. Andrews said, upon the demobilization of the troops. He told of the plans that are already on foot in England looking to the replacement in industry of the men now in the army. To prevent the unemployment that would follow the sudden return to civil life of several million men, England will, Dr. Andrews said, demobilize at such a rate as will not glut the labor market. She may take two or three years to complete her demobilization. This was contrasted with the situation in this country, where the law requires demobilization in a few weeks' time. In England, also, plans are being made for an extensive system of public work, and for the placing of exsoldiers on small farms.

Robert Bruère, just returned from a trip through the West, where he has camped on the trail of the I. W. W., gave his interpretation of the happenings of the past six months in Arizona, Oregon. Washington and Montana. trouble is all due to a state of mind, said Mr. Bruere. Everywhere there is a regime of fear that gives a flavor of apprehension and suspicion to every act. The Arizona operators have spies in the offices of the unions, and the unions have spies in the employers' meetings. The managers have a secret service organization working in the mines to keep down trouble and to accelerate production, and the eastern owners have a secret service to report on the managers. So widespread is the attitude of suspicion that Mr. Bruère never was able to convince some of the managers that he, too, was not a detective in the service of the government

Mr. Bruère told of the "loyaltyleagues" that have been so active in deporting men whose presence was to them undesirable, on the pretext that they were disloyal to the government. In these deportations, both in Arizona and in Montana, there have been, Mr. Bruère said, invasions of private rights quite without regard to the question of loyalty and on the sole ground that those deported were considered undesirable by the business interests represented by the "loyalty learues."

Prof. Henry Pratr Fairchild, of Yale University, speaking on the immigrant, said that the war had aroused the country to the realization that there are citizens here with a divided allegiance. He discussed at length the problems that immigration has raised and spoke in favor of a strong policy of restriction. George Haven Putnam spoke in favor of free trade after the war.

## CROWDING IN THE INSANE

OVERCROWDING in the New York state hospitals for the insane has assumed the most serious proportions in the history of the state, says the twenty-fifth annual report of the State Charities Aid Association, made public recently. The thirteen civil state hospitals are housing 6,900 more patients than they were built to provide for. The total capacity of these institutions is rated at 27,890, but the census at the end of the fiscal year showed that they actually contained 34,798—an over-crowding of 24.7 per cent.

"No other aspect of the problem of adequate and satisfactory care of the in-

sane calls for such serious and prompt consideration," says the report. "It grows steadily worse year by year, and has long since reached a point where it jeopardizes the standards of care and treatment and retards the recovery of patients."

Relief is hoped for from the Hospital Development Commission, created last spring and expected to report shortly on a systematic plan extending over a term of years. Meanwhile, the association's report estimates that the ultimate cost of providing adequately for the insane and feebleminded may aggregate \$20,-000,000, spread over ten years.

## DEMOCRACY FOR THE HOME

O'NE who sat through all the sessions in New York last week of the Home Missions Council, composed of the leading Protestant Home Mission Societies of the United States and Canada, came away with the firm conviction that "here for the first time a national inter-denominational, religious organization has become articulately conscious of the goal toward which we are groping—the coextession of religion and democracy in a frame-work of American idealism."

The atmosphere and direction of the council, says our informant, may best be grasped by a glance at a typical day's program, such as the one devoted to the problems arising out of the war. Every paper, every discussion grew directly out of contemporary life. A Survey of Populations Affected by the War covered first The Negro Migration to the Industrial Centers of the North and East, by John M. Moore, secretary of the Department of Home Missions of the Methodist Episcopal Church, South, who spoke for the white South; President John Hope, of Morehouse College, Atlanta, who spoke for educated Negroes; and Willard Beahan, superintendent of motive power of the Cleveland division of the New York Central Railroad, who spoke for the northern employer of Negro labor. Immigrant and Industrial Populations Under the Pressure of War was treated by the Rev. Charles A. Brooks, of the American Baptist Home Mission Society. Whether the church will meet the challenge of war-inflated industrial communities like Bridgeport and Penns Grove was the question put; an emphatic affirmation was the sense of the council,

Another session was an "open forum for the discussion of significant group movements of which a constructive program for home missions in the new era must take account." Three movements were chosen: The Labor Movement after the War, by the Rev. Charles Stelzle, of the Federal Council of the Churches of Christ in America; the Farmers' Non-Partisan Leazue, by

President Crane of the North Dakota Agricultural Normal School, at Minot: and Radical Social Movement in America as Influenced by the War, by the Rev. Norman M. Thomas of New York. Mr. Thomas said that "radical" has little meaning any longer because of its relativity, but for two and one-half hours the churchmen listened with rising interest to stories of such modern personalities as Arturo Giovannitti, Arthur C. Townley and Karl Liebknecht.

Nor was the council indifferent as to the 362 days of the year remaining after its inspirational three-day sessions. A resolution that emerged from the discussion looks toward the erection of the council into an executive instead of a merely deliberative body. A budget of \$9,000 was voted for the purpose of establishing a central clearing house under an executive secretary. Hitherto, some surveys, as of foreign-born groups, have been carried out by individual boards without the knowledge and perhaps even in repetition of the efforts of other boards. The new plan contemplates that all such work undertaken in future by individual boards shall, through this central headquarters, be made available for all agencies. In addition, it is proposed to institute a permanent scientific survey of the entire country, with reference both to established communities and to special population groups like the Negro, the Spanish-speaking peoples, etc., which shall be made the basis of a concerted program of common action by all the home mission boards during the next quarter-century. Another possibility is that of an architectural competition under the auspices of the Committee on Church Building to meet the demand for a new church architecture.

#### WHY LABOR IS BOTH IDLE AND OVERWORKED

ON the very day that the surgeongeneral of the United States army reported two hundred sick men in one camp hospital without beds, an agent of the United States Department of Labor sent to his chief a report which mentioned a mattress and spring-bed firm laying off its workmen for lack of orders.

This instance, showing how unnecessary hardship to both sick and well. soldier and civilian, results from lack of coordination between government departments, appears in a report that has just been made by Marie L. Obenauer, head of the Women's War Work Section of the United States Employment Service. The report covered five hundred factories in the state of New York which were engaged in filling war orders, and its purpose was to discover what the actual necessities of these firms are with respect to labor. "At the outset," says the report, "it should be stated that the survey made it clear that there

#### THE DECLINE OF POVERTY

BeCAUSE of the competition of war needs, we lack money for the home needs of our poor. We also lack men, for social work in Huffalo could show a service flag covered with stars. It has been said that the prayer of a strong man never is that his burden may be less but that his strength may be more. We need more strength and more resources for the work that must be done if we are to make America safe for democracy, and win our war against poverty. In this war we cannot afford to lower our standards.

cannot a great to lower over standards.

The poor voic, I is, therefore, good citienship for the taspoyres to give them.

The poor voic, I is the proper of is true though incipient poverty is now recognized and counted, which formerly

Is tried through incipient powers in more recognised with scalars of powers, was founded, was founded, which attacks the causes of powers; than to relief. The community work is catalogued on the following pages, not for display but as a pledge of more. We wonst to remove all weights from the lowest of mankind until they can rise to the full stature of which they are capable. Not until then will there be an end of powers.

EDUDEDIC ALLEY

From the Fortieth Annual Report of the Charity Organization Society of Buffalo.

are both shortages of labor and unemployment in the same industries in New York state."

Certain metal industries engaged in less essential operations have, the report states, lost a large part of their commercial business, with resulting unemployment. On the other hand, there has been a heavy increase in war orders, involving castings and forgings for ordnance and aeroplanes and other purposes directly connected with war supplies. In these industries there is a shortage of labor. Most of the short-handed industries are grouped in the western part of the state, while the others are in the eastern part.

"The establishment of this fact." says the report, "not only explains the puzzling conflict of opinion as to whether there was or was not a shortage of labor in the state of New York, but it carries its own concrete suggestion whether by an agreement with organized labor, covering a temporary adjustment of such craft lines as are involved, the 1,600 skilled mechanics called for in the important war-order branches of the iron and steel forging and casting industries of the state cannot be supplied from the allied indus-tries in eastern New York which are not essential to the winning of the war and which have been hard hit by the falling off of commercial orders, and are laying off help or running short time !

Of the five hundred factories studied. which employ 261,117 persons, one hundred and seventy-six are calling for additional labor. More than 34,000 new workers were wanted at the time that the survey was made, mostly skilled male labor, with places for only about three hundred women. The report states that the Department of Labor has not been sufficiently in touch with the War and Navy Departments to know when contracts are let and to what firms. Consequently it has not been in a position to cooperate efficiently with respect to labor supplies.

A very interesting suggestion is made as to the use of the railroads, now that they are managed by the government, to help in the proper distribution of labor. The report says: "While the distance between the cities in which there is a labor shortage and those where there are industries laying off labor are not great, the transportation is a material item, and if it becomes necessary to shift labor from New York city or more distant points, the railroad fare becomes a problem. The circumstance suggests this concrete question: With the government controlling the railroads, is it feasible to make arrangements whereby transportation charges for workers on war orders would be borne equally by the government and the manufacturer if the worker stayed a certain period?"

#### HISTORICAL RESEARCH IN HOUSING

LITERARY curiosity and a monument to the imperturbability of the British temper in war time is the report just issued by the Royal Commission on the Housing of the Industrial Population of Scotland (Cd 8731, 4 sh. net). Though appointed in October, 1912, and reporting on September 11, 1917 (in 460 pages), this commission has not a word to say on the effect of the war on housing conditions, other than in the single sentence, in the majority report, "they [bad conditions] will not disappear in many districts at the close of the war, for existing works have been and are being established in order to cope with the permanent development of industry," and a brief reference to "after-war policy" in the minority report, which has no special relation to war conditions.

None of the figures given for over-

crowding date later than 1911 (the last census), and the commission expressly states that "we do not propose to deal under this head with the causes of overcrowding." It is estimated that 235,990 new houses will be required in the next fourteen years, not allowing for the shortage accumulated since 1911, and during that fourteen-year period. Only one page is devoted to the relation of bad housing to the industrial unrest. One is accustomed in similar British reports to minority reports advocating the taxation of the unearned increment in land values. Here for the first time the position is reversed, and the minority gives reasons for opposing land taxation.

## THE MEANEST BOY AND THE COURTS

IF it be true, as announced, that a committee of the Chicago Boys' Brotherhood Republic is on tour making a search for the "meanest boy. opinions will differ as to the best use to be made of this phenomenon in child psychology when found. Merely to reform the boy himself will doubtless not appeal to most people as repaying so expensive a mission. It will be hoped that something may be forthcoming in the way of a general improvement in the treatment of wrongdoers. The "meanest boy" will very likely prove to be an offender, possibly with more than one conviction to his score. How the courts have handled his case, and what society has done to draw the sting of his waywardness, will be no less interesting subjects than his own abnormal proclivities

To direct the attention of these explorers to any one locality would be invidious. Perhaps they would not err if they looked first in places where juvenile courts, probation officers and the other modern methods of extending friendliness and sympathy to "bad" children have not been tried. A picture of just such a community has been drawn in the past few days by John R. Shillady, director of the department of prevention of the office of the Commissioner of Charities and Correction in Westchester county, New York. This county is merely typical of many others throughout the nation where the treatment of youthful wrongdoers has lagged behind the modern understanding of children.

Children in Westchester county are subject, first, to too many jurisdictions. Eighty-six courts have power at present to deal with them. Seventy of these are justices of the peace in towns, twelve are village justices and four are city magnistrates. No imagination is required to tell one that the treatment accorded children in these diverse and manifold courtrooms is not likely to be tinged with much of the conception that children are only partly responsible for their

wrongdoing and that they are entitled to protection as well as to discipline by courts.

In most parts of the county children are not summoned informally to appear before the judge but are arrested officially on warrants, by police officers, just as if they were adults charged with crime. Neither is there any careful looking into the child's conduct before trial, in order that the court may have the advantage of knowing the conditions under which he lives, his associations and temptations, and the probable causes of his offense. When tried, the child is seldom brought into a sympathetic and informal atmosphere, in a place devoid of court formality and set apart for hearing only children's cases. In the whole of Westchester county there is no separate building for this purpose, though separate chambers are used in a few places. For the most part, the physical surroundings and procedure with children is the same as that for the most sodden adult "rounders." The court does not try to win their trust and induce them to confide in it. Instead. it applies the rigid principles of the criminal law. Children in the chief city of the county are required to come into a building housing the police headquarters, to which is attached the city iail.

Only in the cities of Yonkers and Mt. Vernon-suburbs of New Yorkare there paid probation officers. White Plains has the services of a woman who combines this work with other duties and New Rochelle has a volunteer officer. These officers, needless to say, have more than they can do. The rest of the county, comprising 45 per cent of its population and containing eightytwo of the courts handling children's cases, is without such expert and necessary assistance. The work of these courts is necessarily, says Mr. Shillady, a "blind stab in the dark" No one inquires into the real rather than the superficial causes of the child's waywardness, no one exercises that friendly supervision over him that sets so many children right, no one adjusts the circumstances of his life to his needs. No one calls into play the aid of other childwelfare agencies in the county. Courts "go it alone," instil the "fear of the law" and of punishment into the child and call this justice, and if they are occasionally moved to lenience, they express this attitude in the admonition never to do it again" or in the generous decision, often ill-advised and harmful, to give the child "one more chance." The chance given is too frequently the chance to return to old associations and environment without a friendly hand or eve to keep him straight.

Small wonder, therefore, that among even the children of Westchester county there is a large number of repeaters. In one court where records are kept, 93 out of 151 children, or 62 per cent, had been in court more than once; their total appearances numbered 388, or an average of more than four times each. The hasty character of decisions in the courts outside the cities, where probation officers are not found, is indicated by the fact that 27 per cent of the children who appeared before these courts were committed to institutions, as compared with only 10 per cent in the city

These are only some of the defects in the treatment of youthful offenders in Westchester county. The population of this county is 225,000; it would seem that so thickly settled an area might provide more enlightened protection for its children. To secure this is the purpose of Mr. Shillady's study. The committee on charities and corrections of the county Board of Supervisors now has it under advisement.

Meanwhile, if the search for the "meanest boy" results in uncovering similar neglect elsewhere, or in stirring the consciences of other communities to improvement, it may not prove to have been so Quixotic an undertaking as many persons will at first thought regard it.

## A GREAT NEW INDUSTRY

"W HAT is our greatest national industry?" Sir Leo Chiozza Money,
the British economist, once asked an audience and, after keeping it guessing for
a while, named it as—the shoddy industry. He was able to show by means
of statistics that the great mass of the
"poor" in their household furnishings,
their clothes, their fuel and certain
articles of diet lived largely on scraps,
remnants and byproducts of the great
staple industries.

Considering the multiform uses of old rubber, the fat obtained from sewage, the materials that go into board and paper and, on the other hand, the uses to which these two materials are now put, the composition of the average cheap suiting material, the short hair used in bedding, the doubtful composition of felt hats, the new uses of cereal husks, straw, refuse of quarry and mine, byproducts of coke, iron, steel and other metal scrap—the description of this age as an age of shoddy is not, perhaps, so very inappropriate in this country eithe country either country.

According to a pamphlet of the United States Geological Survey on Secondary Metals in 1916, the total value of recovered scrap metal of all kinds in the United States was \$114,304,930 in 1915 and, owing to the additional economy imposed by the war and high prices, rose to \$265,377,356 in 1916. In 1916, 350,000 tons of copper, equal to over one-third the volume mined during the year, 96,300 tons of lead, about 17 per cent

of the quantity mined, 115,000 tons of zinc, about 16 per cent of the quantity mined, were recovered by melting for new uses.

Enormous quantities of metal scrap and shavings formerly thrown away which it does not pay to melt down, are now pressed into solid bricks which serve many useful industrial purposes. The extent to which old gold and silver scrap, including spoons, tooth fillings and jewelry, enters into the trade of the nation will be realized by the fact that no less than \$20,000,000 worth of these precious metals were recovered in 1916.

Owing to the conservation campaign of the government and the general necessity of saving, the figures for 1917 will be even higher. The days of the ragand-bone man truly are gone. First the Salvation Army and other philanthropic agencies, such as the Goodwill Industries of Boston and Brooklyn, desiring to offer employment to men and women more or less handicapped in the struggle for life. discovered the industrial possibilities of junk. Now business itself has made the discovery and is turning it to its own profit. Such journals as the American Metal Market, the Daily Metal Reporter, the Waste Trade Journal, the Metal Industry and others, according to the Annalist, are entirely devoted to the interests of this, the "greatest national industry."

## SCHOOL AND CITY IN WAR SERVICE

HE School of Applied Social Sciences of Western Reserve University is cooperating with the American Red Cross and local committees of the Council of National Defense in a series of courses of training for volunteers in emergency social service and public health nursing. To furnish as rapidly as possible nurses trained for health work in war time, the school will allow candidates to enter upon their work on the beginning of the second half-year in February instead of limiting the entrance to the autumn semester only. It is expected that an emergency welfare center will soon be opened in the university's public health district as the first unit of a city-wide plan to extend this service as rapidly as may be to all health centers of the city.

The training course in civilian relief is directed by Helen W. Hanchette of the Associated Charities, and will cover six weeks' work. The announcement of this course says: "If such work is to avoid unwarranted intrusion upon the legitimate privacy of family life and if unnecessary humiliation to its beneficiaries is to be avoided, it must be done by those who appreciate the nature of the problem and know how the work of relief can be done sympathetically and efficiently."

The course for emergency social serv-

ice includes four lectures a week by the commissioner of health, probation officers, representatives of the Bureau of Child Hygiene, of various settlements. charitable and nursing societies, the Educational Alliance and instructors in the School of Applied Social Science. The topics discussed include war-time conditions in cities, fighting microbes and the cost of living, the foreigner and his problems, the vicissitudes of the familv, women and children in industry. Many aspects of settlement work make a group of lectures by themselves, so also, aspects of child welfare and public health work.

#### SALESMANSHIP THROUGH EDUCATION

TOW the Boston School of Salesmanship has developed in the past twelve years is the subject of a pamphlet written by Helen R. Norton, associate director of the school, and published by the federal Bureau of Education under title, Department-Store Education.

Beginning in an effort to train eight girls who came because they could not find positions and were too young to be more than cash girls, when the course was finished, the Boston school can now claim partnership with eight large stores in Boston, who select their most promising saleswomen to enter the class and pay them while they learn; while the demand from stores throughout the country has led to the establishment of a course of training for teachers in the

school, and to the appointment of Lucinda W. Prince, director of the school, as director of a department of education of the National Retail Dry Goods Association.

Four achievements may be set down to the credit of this experiment in vocational training. First, it has had a definite influence on the vocation itself as indicated by the appointment of its graduates as educational directors in large stores in several cities in recognition of the fundamental idea, expressed by Miss Norton, that "everyone in the store should be training someone else, or be trained by someone else." Second, it has influenced the public schools in developing similar cooperative training classes. Third, it has demonstrated the necessity for training teachers as part of the scheme for training saleswomen, recognizing vocational training as essentially an educational process which must be based on sound educational methods. Fourth, it has shown the value of a slow development based on a twofold analysis of the pupil and her needs, and the job and its actual content and relationships.

Commissioner of Education Claxton describes the plan as one example of "an interesting survival of apprenticeship instruction, embodying modern methods of classroom work." The report impresses the reader as an illustration also of certain methods of attack and certain principles of growth applicable to training in many other vocations.

## Book Reviews

A Modern Purgatory
By Carlo de Fornaro. Mitchell Kennerley. 178 pp. Price \$1.25; by mail of the
SURVEY, \$1.33.

Carlo de Fornaro is the cartoonist, writer and revolutionary who was convicted in New York courts in 1909 of having libeled a powerful Mexican friend of Porfirio Diaz, in his book, Diaz, Czaro fwexico. Fornaro was sentenced to a year in the New York penitentiary on Blackwell's Island, and actually served there from December, 1909, to October, 1910. A Modern Purgatory is a description of conditions on the island, and of the effect of the author's trial and imprisonment upon him.

As a chapter in the spiritual experiences of a sensitive soul subjected to brutal and degrading punishment, the book is interesting, but neither subtle nor detailed enough to rank as literature. Fornaro reserves the best efforts of his

pen for describing the life of prisoners in the penitentiary. The book would have been more in point if it had come out when its contents would have been news. Fornaro's tales of tyrannizing cruelty, of unnecessary persecution of prisoners, of leering, foul-mouthed keepers and warden, of sheer senseless stupidity and brutishness exhibited by those in authority, and of downright savagery in the neglect of cleanliness and health. would have made interesting reading and might have constituted a public service when Patrick A. Whitney was commissioner of correction and "Paddy" Hayes was warden. This is not to extend full credibility to all that Fornaro writes; he paints at all times with the artist's love of a picture, never with the scientist's love of accurate statement, Nevertheless, we have sufficient testimony to the one-time truth of much that he avers.

Fortunately, however, Blackwell's Is-

land has since been cast on better days. Katharine B. Davis and Burdette G. Lewis, as commissioners, have successively brought the modern humanitarian touch to it: under them, wardens have come and gone. Doubtless the place is not yet all that it should be-its construction and cell blocks alone would prevent that; but it can at least plead "Not guilty" to many of Fornaro's indictinents.

There is one matter touched upon in the book about which it would be interesting to have some present-day evi-This is the third degree, as practiced by modern police authorities. Fornaro describes an accused man as telling how he was brought, after passing two days and nights in a cell without food and water, into the presence of several masked detectives. Stripped to his bare skin, he was compelled to stand on a metal rack with burning-hot points until he attempted to jump off, when the whole gang of sleuths assaulted him, beat and kicked him, and forced him back. After several hours of this treatment he fell to the floor in a faint. No date or names are given, and the story may be the grossest exaggeration. Nevertheless, the third degree is still defended and practiced, not only in New York city but elsewhere; the story may be the simple truth. Perhaps Mayor Hylan and his new police commissioner, Lieut. Richard E. Enright, will be the first to look into the matter.

WINTHROP D. LANE.

CONTEMPORARY THEORIES OF UNEMPLOYMENT AND UNEMPLOYMENT RELIEF

By Frederick C. Mills. Longmans, Green & Co. 178 pp. Price \$2; by mail of the SURVEY \$2.10.

Professor Mills' volume is so strictly a compilation or narrative of theories, rather than a critical treatment of their merits, that one finds it difficult to condense into a book review the gist of his study. Reading page after page of theory about unemployment so well crystallized as to have already achieved what Professor Mills rightly characterizes as an orthodoxy, one cannot help but wonder that we in America have been so slow to apply these "orthodox" theories during or prior to our late unemployment crisis.

Although the ground covered is familiar to students of the problem, SUR-VEY readers will be most interested in the chapter on Contemporary English Theories of Unemployment and Unemployment Relief, especially as the author explains that "to review in detail the various American theories . . . would constitute in large part a mere repetition . . . of the various opinions held by English writers, repetition . . not only . . . of form, but largely of fact also."

The four orthodox theories of the

causes of unemployment are described under the heads: the loss and lack of industrial quality, industrial fluctuations, the reserve of labor, and the personal factor. The author dismisses from consideration the theory of a "labor surplus" as not being widely held today.

Under loss and lack of industrial quality, authorities are quoted in support of the opposing contentions that the introduction of new processes, or the regional shift in the location of an industry or group of industries, occasion merely temporary distress, as is held by Beveridge and the majority of the Poor Law Commission, and that these changes are among the important "frictions of industrial life," as is held by the Webbs. the minority of the Poor Law Commission, and by John Richardson, J. A. Hobson's midway view is cited-that "elasticity of demand" is the determining factor as to whether in a particular trade the introduction of machinery will increase or diminish unemployment. All agree that the "changeability of the industrial process imposes upon the modern workman a degree of mobility and adaptability never exacted from his predecessors."

Relative to age as a factor in the loss of industrial quality, the consensus of opinion is shown to be that men are not dismissed from their positions at present any more frequently than in the past but that getting back into industry after middle age is becoming increasingly difficult. Rowntree and Lasker's evidence in their study of unemployment in the town of York is held to be conclusive

on this point.

On the influence on unemployment of a lack of industrial training the views of the Minority Report, N. B. Dearle, Professor Pigou and Cyril Jackson are given most attention. Beveridge opposes the Minority Report view that mass of unemployment is continually being recruited by a stream of young men from industries which rely upon boy labor and turn it adrift at manhood without any general or special industrial qualifications" by the contention that this system of juvenile unemployment may determine the incidence of unemployment but is of small effect upon the volume.

Beveridge's departure from the minority's view is that while the lack of industrial training may facilitate casual labor, which Beveridge holds to be due to the lack of organization in the labor market. it does not cause it, and therefore is a minor factor in the solution of "underemployment" which, again, he holds to be the fundamental aspect of the unemployment problem.

Professor Pigou's view is cited that "the determinant upon which the average amount of unemployment depends is found in the number of workpeople of the lowest grade, so ill-endowed by nature and education as to be incapable of really efficient work, that exist in any country, as compared with its general

N. B. Dearle has quite another theory, viz., that the lack of industrial training helps to determine the amount as well as the incidence of unemployment. In the absence of steady, skilled hands, he argues, employers utilize large numbers of lower grade, irregularly employed laborers. The availability of the labor supply determines which of two methods the employer will use, whether with skilled labor he will manufacture higher grade goods or with unskilled workers turn to inferior products, either of which methods will usually result in the same amount of net profit to him. Dearle's most important contribution is his exposition of the thesis that a too plentiful labor supply results in irregularity of employment, wasteful production and bad training methods, the whole occasioning a vicious interaction between unemployment and faulty industrial training.

Cyril Jackson's survey of boy labor convinced him of the difficulty boys find in securing permanent work of a sarisfactory character, and the degenerating effect of the work they do get not only negatively in failing to train them, but positively in breaking down character and sense of responsibility."

The organization of boy labor and the reorganization of general education and of industrial training are the two main remedies proposed for these latter evils. Compulsory, technical and physical training for unemployed juveniles up to age 19 are advocated by Rowntree and Lasker. Dearle's advocacy of a system of reorganized and supervised workshop apprenticeship is counterbalanced by Dunlan and Denman's contention that the plan of giving all boys a technical training is absurd since there is, they say, "a real demand for a great deal of low-skilled labor."

The Minority Report proposes the most drastic scheme of any reviewed: that no boy under the age of 15 shall be employed in any occupation whatsoever; no youth under the age of 18 shall be employed more than 30 hours per week; all youths between the age of 15 and 18 shall attend a compulsory continuation school giving physical and industrial training 30 hours per week. Beveridge counters on all the disputants by urging that the real remedies lie in a better organization of the labor market, with an extension of labor market organization into the schools.

The second factor in the orthodox analysis - industrial fluctuations - is treated in familiar fashion. John A. Hobson's admonition against frittering away the unity of a great subject by a study of detailed facts is a welcome oasis in a desert of economic neutrality. He argues that the existence of surplus incomes not earned by the recipients disturbs the "right proportion" between spending and saving in an industrial community and advocates as preventives of unemployment, the taxation of unearned incomes, the money so secured to be dispensed in raising the standard of public life, the raising of wages, the general shortening of hours and the removal from the labor market of juvenile workers, inefficients and weaklings.

Proposals for taking up the slack of labor due to seasonal and cyclical fluctuations are most definitely made by Rowntree and Lasker and by the minority of the Poor Law Commission, afforestation and land reclamation being the two main proposals made for this purpose. The former authors' proposal of a "decentralization of town population" is cited among the more important

remedial palliatives.

Beveridge's classic and now familiar analysis of the causes of the existence of a labor reserve and the theoretical arguments for a national system of labor exchanges, now an established fact in England, are the central subjects treated under the third of the orthodox theories of the causes of unemployment. Beveridge's analysis is "that the number of workers who gather in any given center of the labor market will tend to equal the maximum number who may be able to find employment in that center" and "that if each employer maintains his own center of employment, a separate reserve will be built up for each of them." Dock employment is the most familiar example of the condition. A high wage level, unemployment insurance or elasticity of hours are the expedients advocated to insure a normal reserve to meet the fluctuations of labor demand without distress ensuing, together with a pooling of demand and supply through labor exchanges. The compulsory hiring of men through the national labor exchanges for irregular work is the Webbs' contribution to this phase of the subject, excluding only men who are hired for at least one month. Halving of boy labor, reduction of the hours of labor of railway and tramway servants and "mothers' allowances" to permit the withdrawal from industry of wage-earning mothers, complete the catalog of remedies, these three being the familiar but only partially realized proposals of the Minority Report.

Current theories about the unemployable and a discussion of the theories of unemployment insurance conclude the chapter, no new points being brought out and no review of the workings of the British national insurance act being attempted.

The distinctive features of American theory treated grow out of the factors of immigration and migratory labor. Opposing theories of immigration as a true cause of unemployment and as merely incidental are described, as held in the first instance by the United States Immigration Commission (1911) and the American Federation of Labor, and in the second by Isaac Hourwich, Leiserson and others. Recent literature (1908 to 1914) concerning the floating laborer is reviewed, and a survey made of the vagrancy laws of the various states.

The danger of a treatment of theory, unchecked by a knowledge of what actually has happened, is illustrated by the author's assertion that "New York state has established a farm colony for tramps and vagrants," whereas there exists only a site and an inactive board of managers. An omission of note is R. Williams' First Year's Working of the Liverpool Dooks Scheme

JOHN R. SHILLADY.

MILITARISM

By Karl Liebknecht. B. W. Huebsch.
178 pp. Price \$1; by mail of the SUR-VEY \$1.10.

When this book appeared in 1907 it was suppressed and its author was sentenced to a year and a half in jail. Its bold arraignment of militarism should do much to assist in understanding those among the Germans who will most need to be counted upon if their country is ever to be democratized. As a friend of the author says in the introduction: "Liebknecht raised his voice in behalf of a German republic when those who now declare that the only way to end the war is by making Germany a republic, supported and encouraged the German monarchy."

The work, while mainly an attack on the militarism of Germany, is not confined to the system in that country. Its thesis is that every ruling class everywhere seeks to maintain its rule by force. "Militarism is not specifically a capitalistic institution," though it is true that "capitalism develops, like every other society divided in classes, a kind of militarism peculiar to itself," e. g., universal military service, or a large constabulary or police force for use against the masses. While other causes may and do contribute to the making of war, "for capitalism war is indeed 'a part of God's world-order."

In Germany, "though modern militarism is but an institution of our capitalist society, it is none the less true that it is an institution which has almost succeeded in becoming independent, an end in itself." The chapters in which Liebknecht details the sins of this institution supply material now familiar enough. He describes with particular warmth conscription as a means of inbuing the populace with the spirit of slavish obedience.

Like a good Hegelian, however, he believes that the system is doomed to destruction because of inherent self-contradiction. Militarism has the double task of fighting a foreign foe and of suppressing initiative at home. "War training demands ever more imperatively a continuously growing measure of initiative on the part of the soldier. As a 'watchdog of capital,' however, the soldier does not require any initiative, is not even allowed to possess it. In short, war against the foreign foe requires men, war against the foreign foe requires, machines. . . . Here we see clearly a potential self-destruction of militarism.'

Karl Liebknecht's own courageous opposition to the system in his country would seem to indicate that something more personal than an inherent self-contradiction is needed if the fulfilment of the prophecy is not to be too long and too tragically deferred. Written a decade ago, this book warns its readers even then how the evil is spreading. It cites (p. 51) how "England and also America (a country in which the standing army was increased from 27,000 to about 61,000 men from 1896 to 1906, where the number of men in the war navy was doubled, the war budget multiplied by two and a half, and the navy budget by three in the same space of time, and where Mr. Taft asked for one hundred millions more for 1907) are being increasingly pushed into the paths of the militarism of the European continent "

While the book perhaps overemphasizes the part played by the class struggle in creating modern armaments, its words deserve the most careful heeding. One closes its covers with the fervent wish that all the chambers of commerce, all the editors, preachers and professors now calling for a vigorous continuation of the war to crush militarism in Germany were as convinced that when this war is ended, militarism everywhere is to go.

HENRY NEUMANN.

PERMANENT VALUES IN EDUCATION By Kenneth Richmond. E. P. Dutton & Co. 125 pp. Price \$1.25; by mail of the SURVEY \$1.33.

"Real philosophies, good and had alike, have issue in acts." Kenneth Richmond, the English author of Permanent Values in Education, believes this to be the paramount educational lesson of the great war. Germany today is "the gigantic and obvious case." After fifty years of teaching, her national philosophy has borne fruit in national action. Onlookers have been first incredulous and then amazed and even yet cannot read the writing on the wall, that ideals are the truly potent forces in education.

This brief volume deserves a wide reading in our country where an ever increasing preoccupation with the details of educational method has its hold on the best mental material of our schools.

In his able introduction Mr. Clutton-Brock says: "We are always talking about the minds of those who are to be educated, but in doing so we are ant to forget the mind of the educator. every weakness in his mind is sure to betray itself in his teaching." What is the prevailing weakness in the minds of American teachers today? Is it not a reluctance or inability to think in terms of ultimate aims? Are not the results of such weakness everywhere visible in the unmoral atmosphere of our schools? Are we not defending our children on the battlefields of Europe and at the same time leaving them defenseless before the ideals of a Nietsche? We speak confidently of a defeated Germany. Have we forgotten how captivity has led captive more than once in the history of our world?

Mr. Richmond's thesis is the recognition of permanent values in past educational experience, their re-interpretation in terms of the modern world, and their integration as the basis of our educational philosophy that shall be adequate for the teacher in whose hands the shaping of the future is to be. His book is addressed to his countrymen. He speaks more than once of a national philosophy. but this does not limit his scope. His vision is too clear and the "permanent values in education" are of universal significance. They are international ideals that take shape on his pages even as the problems he recognizes are international.

Of special interest is the brilliant chapter on Rousseau and the ideal of liberty, and the introduction by A. Clutton-Brock ably supplements the argument of the book itself.

IEAN LEE HUNT.

A DISTARY COMPUTER

By Amy Elizabeth Pope. G. P. Putnam's Sons. 170 pp. Price \$1.25; by mail of the SURVEY, \$1.35.

The time is not long past when appetite was considered a sufficient guide in the selection of food. If a man liked meat it was provided for him almost to the exclusion of other foods. If he disliked bread or other starchy foods his dietary was made up without them. The poor ate what was cheap or easily obtained. Vague injunctions were issued to the sick that they should eat less sugar or less meat, but the actual amount desirable was left more or less to personal and uninstructed initiative.

A healthy appetite and the habits of generally accepted custom have in many instances produced what in modern parlance is termed a well-balanced meal, though all too frequently personal taste, poverty or ignorance produced disastrous results. The value of accuracy which is being emphasized in many fields has of recent years in the field of dietetics assumed a wholly new importance.

Miss Pope's latest book, A Practical Dietary Computer, is designed to assist the nurse principally by means of a series of well-arranged tables to apply accuracy to the feeding of children and of

older people.

Though written, according to the preface, primarily for nurses, the book should be useful to anyone endeavoring to apportion the various food values of a meal scientifically. Many of the tables in slightly different form are, of course, to be found in other books, but in no one is just the same information obtainable.

Recipes with the caloric value of each ingredient are simply arranged. The tables of foods giving percentages of the various foodstuffs give also in adjoining columns the number of grams to the ounce for each food as well as the number of ralories.

The little book may well find a place on the reference shelves of all libraries used by nurses and those interested in home economics.

MARY S. GARDNER.

DISASTERS AND THE AMERICAN RED CROSS IN DISASTER RELIEF

By J. Byron Deacon. Russell Sage Foundation. 230 pp. Price \$.75; by mail of the SURVEY \$.81.

Mr. Deacon shows that, as great disasters involving many human beings are proved to be frequent, there should be real knowledge of how relief work can hest be organized and made effective. He would have a continuing body the denository for such knowledge and able to send trained people to the scenes of the larger disasters. He rightly emphasizes trained relief givers. The American Red Cross is alone qualified to be such a source of knowledge and trained efficiency. Mr. Deacon makes plain that. while disasters differ, some destroying bread-winners and shattering families, others merely destroying property, it is always essential that human suffering in the first crisis should be prevented as far as possible by prompt and adequate, if also indiscriminate, immediate reliet. There should, of course, be no needless delay in the work of rehabilitation; that is, of helping families to return, as best they may, to normal life. For rehabilitation, registration is necessary and a study of each family's individual problems and aspirations.

Mr. Deacon is entirely right in perceiving that the family is not only the unit to be kept in mind, but that it is the senior partner in every well-conducted relief enterprise, a relief committee, however intelligent and well supplied with funds, being only an assistant.

All relief funds, according to Mr. Deacon, should be promptly unified, "free lance" relief agencies being eliminated. With the funds concentrated, a relief organization should be created. The organization should not be rigid, because it is not permanent, but flexible

that it may supply immediate wants, it may also in due course undertake to master the problems so that such immediate wants must disappear. Committees for food, clothing and emergency shelter are clearly needed, but these, almost as soon as really efficient, should be merged in the work of rehabilitation, which should both reduce through knowledge of individual families the people waiting in line for necessities and should help them in providing permanent support, which should be, if possible, self-support.

Mr. Deacon cites relief work after various disasters—the Eastland, Titania and Volturno wrecks, the Cherry Mine explosion, the Triangle shirtwaist fire in New York, the earthquake at San Francisco in 1906, the floods in Ohio in 1913.

In connection with one disaster he says the relief givers learned that their relief was inadequate by the complaints of the beneficiaries. This seems hardly safe. Usually those who need most complain least, and vice versa. Deacon clearly knows the Triangle shirtwaist disaster better than the San Francisco, which was one hundred times as large. His review is throughout impersonal. The reader gets little conception of the political questions involved, especially in the case of an outside organization-the Red Cross-entering devastated places. The Dayton flood relief work is dwelt upon, but no reference is made to the well-known relief activities of the president of the National Cash Register Company. In the case of the Triangle shirtwaist factory. the relief fund proved too large. But no light is thrown on the question whether, as a rule, relief funds are too small or too large. The author is more interesting and more confident in his "principles" than when he is presenting his facts. Indeed, he tends to inject discussions of principles into his presentation of facts.

The author says (page 172): "It cannot be too strongly emphasized, then, that it is not the province of disaster relief to employ its funds in restoring losses and compensating for death or personal injury." It is interesting to note that at Halifax, the latest scene of serious disaster, such full compensation is intended.

The following (page 105) has been proved by experience: "Trained social workers, Red Cross nurses and others with experience in the treatment of families in disasters are the "backbone" of the relief organization."

JOHN F. MOORS.

HEALTH FIRST
By Henry Dwight Chapin. Century Co.
231 pp. Price \$1.50; by mail of the SURver \$1.60.

Dr. Chapin has written an interesting and readable book, emphasizing in

the opening chapters the importance of health as being essential to one's welfare, happiness and efficiency. There follow chapters devoted to the health of the infant and the growing child, and the proper training of children along health lines. Conditions affecting health in middle life and health measures tending to retard the approach of old age are duly discussed, including health diet. Various practices or conditions favoring infection with communicable diseases and precautions for avoiding or preventing them are given, together with comments as to physical, climatic and moral or mental influences in their relation to health.

The book is intended for the lay reader rather than for the health expert. It is written concisely and in a didactic manner. In certain places there is a tendency to give rather specific directions, e. g., as to the care of infants, when it would perhaps have been wiser to urge more often that a competent physician or clinic be consulted.

In some instances lack of accuracy is evident, as where the Department of Health, City of New York, is so mentioned and elsewhere is called Board of Health: or where it is stated that diseases are not now believed to be airborne, and a few pages later states that "disease-producing, intestinal germs are seldom air-borne. Inaccuracies such as the latter are apt to be misleading and misunderstood by the ordinary reader.

A reading of the book should stimulate healthful thinking and should lead to the exercise of healthful precautions in daily life. For the application of individual details, however, it were wiser to consult a well-trained physician.

LYMAN ASA JONES.

An Introduction to Special School Work By Marion F. Bridie. Longmans, Green and Company. 238 pp. Price \$1.10; by mail of the Survey, \$1.20.

To those who are struggling with the problem of educating the defective in the public schools, this work by Marion F. Bridie, assistant superintendent of special schools in Birmingham, England, will be most welcome.

Those who are working at first hand with the defective, as Miss Bridie is doing, gain a clinical experience which can be nothing less than full of helpful suggestions to the practical worker. Some of us have been not a little weary of the theoretical discussions as to what the defective is like or not like, indulged in by those who have merely seen a half-dozen defectives under conditions not at all comparable to schoolroom conditions.

Miss Bridie's book has twelve chapters. In the first one-Those Less Fortunate in Mind-she discusses the defective as "he is" and gives the aim of special school training.

In the second chapter, which she

calls Understanding, she discusses disci-pline and says: "To say that a child is thoroughly bad is just another way of lumping together certain striking characteristics and confessing that they are not understood, whereas each child, by every movement, look, interest or question, is unconsciously opening the little windows by which an earnest searcher can see into his soul. Let the searcher, besides the understanding eve. bring the understanding heart to bear on his investigations."

This chapter gives support to the understanding special-class teacher who has tried right along to treat her pupils as if those anti-social actions were due to a lack of "know how" instead of to

deliberate wilfulness.

Under the title of Preparatory Class Miss Bridie discusses the kind of work suitable for low-grade children. Following this chapter are others which take up the various subjects in the curriculum of the special schools-sense training, reading, oral lessons, number work, physical training, junior manual training, vocational work. The last chapter is on school organization, in which she discusses the various types of special schools in England, America and Germany.

Again, whether or not one agrees wholly with all that Miss Bridie has written, it is certain that her book will receive a hearty welcome from all special school teachers.

#### GRAIN FOR BRITAIN'S BEER

To THE EDITOR: Please try to get the controllers to put an embargo on grain which goes to brewers and distillers abroad while we are denying ourselves at home. Britain is the chief offender; her aristocrats and some of the members of Parliament are largely at fault. WILLIAM S. LYON. Wellesley, Mass,

A NICE TRIP THESE COLD DAYS To THE EDITOR: The community forum of Daytona Beach, Fla., was formed in De-cember. It will be affiliated with the National Forum Council whose motto is "Let There Be Light." We are after good speakers, those with a good message, timely and up-to-date. We pay the expenses of our speakers, also entertainment while here. We speakers, also entertainment while nere. We expect to have on our list, this winter, such men and women as W. J. Bryan, John Burns of Kentucky, Patriek Kelly of Washington, D. C., Vice-President Marshall, Maud Ballington Booth, Mabel Quam Stevens, and others. The thought occurs to me that you might be able to give us some good ones to figure with.

SMITH G. YOUNG. [112 Halifax avenue] Daytona Beach, Fla.

#### OUR NEW OLD PROBLEM

To THE EDITOR: While waiting in the mayor's office in Newport the other day I found this in the eity records:

The mayor of Newport has written the

commandant of the Training Station for an explanation of his remarks which have been used in a debate in Congress over the advisability of removing the Naval Academy and Training Station from Newport. Commandant D. M. Fairfax replies in a letter dated April 23, 1864:

. . I referred merely to a class of girls who are frequently mentioned by the watchmen and our police as walking in remote parts of the city late of a Saturday evening with the midshipmen, also to those who sell liquor to agents of the students for their use and contrary to the views expressed by many storekeepers. I expressed myself stronger than I could have wished. but I think a just interpretation has been given to what I did say. It was intended merely to point out difficulties in the way of keeping up nice discipline at the Academy as now situated in the center of a city of this size, and with half of the stu-dents across the bay, and every Saturday turned loose in the midst of strong temperature tations. . . .

The mayor in his address of June 6, 1864, after recounting this controversy, comments as follows on the debate:

"In the debate which took place both in the House and Senate, especially in the former, infamous slanderous charges were made as to the morality of the people of this city for which there was no founda-

#### PROFITS FROM GRIEF

To THE EDITOR: When may the spirit and purpose of conservation transcend the things of the body and invade the sacred precincts of the things of the soul?

When the drygoods merchant blazes the all sentimental barriers fall. the department store advertises a supply of crepe and mourning goods with an imported attendant from Paris to advise bereaved women on the latest Paris styles and materials for mourning; when the wholesale drygoods man hints to the writer that crepe and mourning goods are already prepared to meet the casualty lists as they are flashed over the sea; when the merchant has prepared to discount the sorrows of a nation for his profit-the spirit and purpose of conservation marches past bread and coal and enters the sanctum sanctorum of the affections without apology.

A new service insignia should take its place: a white cross (same as the Red Cross) on a black field in a circle tells its tale with emphasis equal to the black garments of mourning and the crepe veil. The circle for mourning and the crepe veil. eternity, it has no end; the black field for sorrow and mourning; the cross for sacri-fice and suffering; the white for triumph. Each star in the service flag may be covthe star is worn has paid the price of his

love of freedom and democracy with his life. Father, mother, wife, sister, brother, lover may wear upon the arm, or button upon the coat or the flag at the window, this telling emblem that he who runs may read.

Let it be so that the high cost of mourning may come from the heart, not from the pocket; that the conservation may be for the living; that the corralled stocks of mourning goods may find no market here.

New York.

R. H. WaytiL.

#### **IOTTINGS**

IN Stretching the Pay Envelope, by John A. Firch, in the Stuwer for January 12, the statement is made on the basis of Annalist figures that the wholesale price of foods increased 123 per cent between February 1, 1916, and October 1, 1917. This is an incorrect inference. The difference between the index figures for the two dates, which was 123, is not the percentage of increase the contract of th

OVER 400 in a yearly total of 2,400 students in the automobile school of the New York Y. M. C. A. are women. Sixty women have been trained for the Women's League of National Service and a number are driving cars in France for the Red Cross and other American relief agencies.

TIIE Royal Victoria Tuberculosis Trust of Edinburgh has endowed a chair of tuberculosis at Edinburgh University. The first professor will be Sir Robert William Philips, widely known as a specialist in the subject of tuberculosis. Edinburgh is said to be first university in the British empire to establish such a chair.

STATISTICS from Berlin percolate slowly these days. But official figures of Forwarett are quoted in the current issue of the Journal of the Outdoor Life showing that in the three months of March, April and May, 1917, there were 2,925 deaths from tuberculosis in Berlin, against 1,844 for the same period of the year before.

INQUIRIES made by the Pennsylvania Children's Bureau among institutions earing for dependent children in the state indicate that the chief effects of the war so far are a great increase in cost of maintenance and a decrease in contributions. Some institutions of the contribution of the contribution of the The basis point on the contribution of the form families of soldiers and sailors should be referred to the local committee on civilian relief of the American Red Cross.

THE Official Bulletin for December 29 issues a call for 37,500 nurses, or an increase of 1,000 per cent over the present number in the Army Medical Corpared to the army hospitals, oversess and hospitals at National Guard and National Army camps. All this in addition to the need for nurses already indicated in the that civilian work in cities and rural districts shall not suffer loss.

CATHERINE FERTIG, director of Neighborhood House, a St. Louis social settlement, has been appointed a police sergeant in com-

plete charge of policewomen work with a staff of four policewomen who have been in the department about two years as marcons and ten probationary patrolowmen authortised by the Board of Police Commissioners. The property of the Police Commissioners, was brought about by the Joint Conference of Suffrage Leagues with the cooperation of other social seguries. The joint conference of processed against the employment of the property of the property of the property of equal pay for equal work by women.

FOUR men are wanted by the American Red Cross to take charge of the handling of supplies between Paris and the front under the Department of Military Relief in France, The Qualifications are zeculitive or administrative ability with a knowledge of handling supplies or of general relief work. Four men of institutional training are wanted also as superintendents of Red Cross hospitals in Paris. All of these positions earry salary and expenses. Men in the Medical Reserve Corps or other corps of the army ticulars may be had of DP. Richard M. Pearce, secretary Medical Advisory Committee, American Red Cross, Washington, D. C.

ALL of the bills in the Missouri children's code defeated in the 1917 Assembly (11 out of 52 carried) will be re-introduced in this year's legislation with such revisions and adversal segments of the Children's Code Commission, recently appointed by Governor Cardenr, with Judge Rhodes E. Cave as chairman again, there was unanimous agreement in the chairman's statement that "wer must have high stand-the protection of the state's future citizens after the war." The commission includes leading lawyers, social workers, club women, members of the lass General Assembly and other persons interested in child wet.

SIXTEEN representatives of agricultural labourers, together with sixteen farmers' representatives and seven impartial persons appointed by the Baard of Agriculture, are pointed by the Baard of Agriculture, are for England and Wales just established under the provisions of the corn production act of 1917. The labor representatives are all uninoists. In order that the direct appointees of the board should not exclusively performed the second of the second of the second of the second of the followers, a former president of the Board of Agriculture (in a Torry government), has been appointed chairman. The constitution of this board for the first The constitution of this board for the first matter than the second of the secon

THAT forty-three out of forty-nine women prisoners in the women's department of the state penitentiary at Joliet, Ill., were either feebleminded or borderline cases, is the conclusion reached by a study conducted by Louise E., Ordanis and Corper Ordahi and published in the Journal of Dringwarey. of the women in prison at that time. Fourteen, or 28.5 per cent, were found to be definitely feebleminded, ten borderline and only six normal. Feeblemindedness was found to be the actual cause of crime in 33.7 per cent of the cases. For the definitely feebleminded, say the writers, there should have the power to commit them to the care of institutions for the feebleminded or for defective incorrigibles.

MORE mutton and more wool are needed, but this is no reason, says the General Federation of Women's Clubs in a memorandum widely circulated, why commercial interests, backed by politicians, shall be allowed to use the national parks for grazing sheep. The as a convenient excuse to stockmen for gaining possession of two comparatively small park areas in California. That other areas of supreme beauty be converted from pop-ular resorts of rest and recreation into pastures while at the same time much grazing land is yet available in the unreserved public lands and in the national forests, is a real danger; just as in our cities it is necessary to keep constant watch over the uses of the public parks which, under one pretext or another, are always threatened with some alternative avowedly more "practical" use.

ADIUSTING its educational propaganda to meet the demands of the times the Elizabeth McCormick Memorial Fund has included in its plans of work for the current year the program of the joint child welfare committee which has been formed by the women of the national and state councils of defense at Chicago. Among the features of their program are an itinerant welfare exhibit to be sent through the state in a Pullman car, cooperation to obtain complete birth registration in Illinois, a community nurse in every county and the training of nurses for such public health work, assistance to the State Department of Health in maintaining its clinics for infantile paralysis, promotion of baby week demonstrations and maternity clinics, creation of central supply stations for child welfare exhibit material, distribution of bulletins on infant and child welfare interests and sending speakers and organizers through the state to further publicity and education for the promotion of child welfare.

EAST ST. LOUIS, of spotted reputation, is reforming herself. It recently adopted the commission form of government, which will go into effect in April, 1919. Without waiting for it, however, the Chamber of Commerce has started on a campaign to make the city "the most beautiful and attractive industrial city in the world, the best place to live in, as well as the most profitable for manufacture and employment." To awaken the citizens to their opportunities, a city planning exhibition was held in January, composed of the exhibit of the American Institute of Architects and many additional items. As a direct outgrowth of this exhibition, a movement was initiated to secure the appointment of a city plan commission to improve the approach to the new St. Louis municipal bridge and to reform housing conditions. Women's organizations took a considerable part in the preparation of the exhibition and in the discussions at the evening meetings on various municipal topics, which aroused considerable interest in the city.

AUSTRALIA has once more rejected con-When this scription by a decisive majority. issue was put up to a referendum vote in October, 1916, 1,088,000 votes were given in favor and 1,160,000 against. Mr. Hughes, when elected premier, declared that he would submit the question again if altered circumstances seemed to render this desirable. These circumstances had arisen, according to a speech of the premier on November 7, 1917, with the "increased gravity of the mili-tary situation" and with the inadequacy of the voluntary system of recruiting to reinforce the Australian overseas force. new referendum, in contrast with the first one, was not on the theory of compulsory service but upon a definite scheme of raising by compulsory service the number of troops necessary to maintain the five divisions of

the commonwealth at effective atrength. me commonwealth at effective strength. It was rejected by an adverse vote of 1,173,000 against a favorable vote of 1,013,000; a majority against of 165,000 as compared with the earlier majority of 72,000. The Australian vote came close on the heels of the overwhelming majority in favor of conecciption in Canada

HOMER FOLKS, director of the Department of Civil Affairs of the American Red Cross in Europe, has given the Associated Press a report which outlines briefly the work de-scribed in detail by Paul U. Kellogg's articles in the Suavey for November 24, December 1, December 8 and December 15, 1917. The dispatch says that forty million France will be spent on civilian relief in France during the next five months and closes with the following paragraph: "The staff of the civilian department, which began with thirteen members, now numbers 364, Friends Unit, who are working under the Red Cross. It is proposed to double the present staff of the civilian department."

IOHN F. MOORS has been elected a fellow of the Corporation of Harvard University to succeed Robert Bacon, resigned. His selection has been widely hailed as a move to meet the demand that the governing body at Harvard he less representative of hig business interests. Mr. Moors has only just returned to Boston from Halifax, where he was in charge of relief work for the American Red Cross—a post following on his similar experience at San Francisco after the earthquake and at the Chelsea and Salem fires. He has been a powerful factor in the public school situation in Boston since 1894, and is head of the Public School Association. He is president of the Boston Associated Charities, a member of the council of Radcliffe College, chairman of the Finance Commission and is a lecturer on investments in the Graduate Business School. Writing on Mr. Moors' selection in the Harvard Alumni Balletin, Joseph Lee, an '83 class-mate of Mr. Moors at Harvard, says of him: "The success of John F. Moors, which is now great and visible to all, has arisen from a very unusual gift of moral adhesion. Not once but many times he has espoused, in the day of its low estate, a cause, and has stuck to it until he has seen it prosper. It is such causes that have invariably attracted him. Their success constitutes a series of mile-stones in a remarkable career of public service."

THE League for Preventive Work, a cooperative organization of nineteen social service agencies of Boston, formed two and one-half years ago, has just issued the first number of a quarterly bulletin, designed to help in unifying social efforts in its locality by informing each of the constituent agencies of what the other organizations are at the moment attempting. This league is per-baps a unique attempt to bring together a group of representative agencies doing char-itable, medical or other forms of social casework among families. Contributions from with its office and executive secretary, the governing body being a joint committee of the constituent agencies. The league has confined its efforts until recently chiefly to a publicity and investigative campaign on the subject of feehlemindedness in Massachusetts, and has prepared a traveling exhibit on the subject. Last summer the urgency of the food problem caused a special committee to be formed for the purpose of undertaking a study and making a report upon the food supply in families known to the agencies of the league. An article based on this report was published in the Survey for January 12. The publication of the quarterly bulletin is a third attempt to coordinate efforts and to help executives, staff workers and trustees of charitable agencies in Boston to combine and focus efforts on the common problems of preventive work which underly the details of social case-work with families

FROM twelve to fourteen people living, sleeping and eating in a box car was one of the illustrations offered, at the recent annual convention of the League of Kansas Munici-palities, of the need for a state housing law. The only ventilation to the habitation mentioned, according to the president of the of Topeka, would be a 2-by-2 window in one end and the door by which they enter in the other—usually both of them closed. This box car housing of railroad employes mis box car housing of railroad employes with their families, especially when they are Mexican, may be seen in other states as well. These laborers and their families are shipped into the state, some box cars are run into the railroad yard, and, while their occupation is not compulsory, says Mr. Porter, "of course, the people live in them." "The children of these Mexicans in them." "The children of these Mexicans are attending our grade schools and will apparently soon become citizens of the United States. Surely we should look after their health and moral education as well as their mental education." The rapid growth of Kansas cities is another reason given for the urgent need of a housing law.

## 5,250 Linen Sheets 8,500 Pillow Cases at McCutcheon's

Pure Linen Sheets and Pillow Cases of reliable qualtity, which are a very scarce commodity anywhere these days, are here in abundance in every required size. We cannot guarantee present prices after the end of this month. The greater part of these goods came from Belgium nearly two years ago.

#### Hemstitched Linen Sheets

Single-Bed Sizes, \$10.50, 12.50, 13.75, 14.50, 15.50, 17.50, 23.50, 25.00, 27.50, 32.50 per pair.
Double-Bed Sizes, \$14.50, 17.50, 20.00, 22.50, 27.50, 32.50, 36.00

Linen Pillow Cases

 $22\frac{1}{2} \times 36$  inches, \$2.25, 2.75, 3.25, 3.50, 3.75, 4.50, 5.50, 6.50, 7.50 per pair.

25 x 36 inches, \$3.25, 3.75, 4.25, 6.00, 7.50 per pair. 27 x 36 inches, \$3.50, 6.00 per pair.

Now is the time to lay in a stock of Household Linens before prices go higher. They are bound to advance in the very near future owing to increasing scarcity of goods.

Orders by mail given special attention.

James McCutcheon & Co. Fifth Avenue, 34th and 33d Streets, New York

## The Response of the American Red Cross to the Emergency-I'

By Paul U. Kellogg

EDITOR THE SURVEY

Rome, December 22, 1917. N THE HILLS bordering Lake Garda to the south lies an old battleground where sixty years ago the French and Piedmontese defeated the Austrians. For a month past, not only French and Italian, but British troops have been streaming through this region. They have been reinforcing the new front on the line of the Piave, where the Italian armies checked and held the invading Austrians of 1917, who came down late in October driving before them half a million refugees from Friuli and the Veneto.

This reawakening of old echoes of gunfire in the long struggle for Italian liberation had its response in the declaration of war by the Congress of the United States. But there is another span of circumstance in which America played a more immediate part, from Padua and Venice to the Sicilies, in the prompt despatch of trained men, supplies and rolling stock from the Paris headquarters of the American Red Cross commissioner to Europe.

For it was on this old battlefield of Solferino, that in 1859 Henri Dunant, the Swiss forerunner of the Red Cross, went out before the heat of the conflict had spent itself, tending the wounded who lay in anguish, without water, or comfort or medical aid. It was here that he was fired with his conception of a noncombatant service which would be respected by all armies. There followed that conference at Geneva in 1864, which chose the Swiss flag, reversed, as its symbol-a red cross on a white field-and laid the framework for those international understandings which are the law for the sick and wounded, for stretcher-bearer and ambulance man and nurse, wherever the battle lines run.

And within four days after our declaration of war against Austria, the first section of the American Red Cross Ambulance Corps for Italy traversed the old battlefield of Solferino on the way to the Piave front. The Red Cross was even then in the sixth week of its emergent relief work for Italian refugees.

To pick up our thread of history: The question on which

<sup>1</sup>This is the first of a series of three articles. The second will be published gent week.

it seemed likely that the Geneva conference of 1864 would split was the belief of the European delegates that the military commanders would not brook the intrusion of other than fighting men in the midst of their operations. An American, a member of that Voluntary Sanitary Commission which played so active a part in all the campaigns of the armies of the North, carried the day with his testimony fresh from the battlefields of our Civil War. In the intervening years, Americans further pioneered by employing the Red Cross organization, which sprang from the bloody slopes of this Italian battlefield, as our chief agency for succor in times of great fires and floods and other forms of internal disaster. There has been, therefore, a sense of noble indebtedness, nobly returned, that has entered these weeks into the eager outreaching of civilian help from the people of the United States to the Italian people, sorely pressed as they are in turning every city and village of the peninsula into a haven of refuge for women and children rendered homeless by the invasion.

At a time, then, when American participation in the war has been only a phrase to the mass of Italians, the American Red Cross, with little more than a corporal's guard of active workers, has made American fellowship a reality. Before its own permanent commission to Italy had sailed from New York, the existing organization in France, at the very peak of its load of work for American troops, French troops and French civilians, was able to fill in the breach with experienced men; open central offices in Rome early in November: canvass the situation by wire through the American embassy and consular service; despatch an ambulance section and two trains of supplies; make wholesale purchases in Italy (while these supplies were en route from France); wire money to spend on the spot to consuls, committees and local agencies (while these last supplies were en route from the Italian markets); send out north and south the nucleus of a field staff. and commission two ranking American experts in emergency relief to make a rapid survey of the whole field as the basis for a long plan of help.

In saying this much, we must keep things in perspective, The part which the American Red Cross played in these first weeks of emergency must be seen against the background of

Photo by Control News Samica

A FOOD STATION IN VENICE

voluntary effort put forward by Italian agencies; the part which these agencies have played must be seen against the background of government action — municipal, provincial, national—and the part which all together have played must be seen against the tremendous rush of emergent need.

The brunt of it fell on the refugees themselves, and they bore it, hungry, athirst, drenched to their skins, packed in cattle cars or sleeping on stone floors when better provision failed. More, the excruciating experience of their slow southbound transport is but the first chapter in a situation, which if we are to judge by the experience of French and Belgian refugees of three years ago, will tax the competence and generosity of all the agencies concerned for months to come. Even so, the part which the American Red Cross has been able to play has been larger and more effective with every day that has passed, and not only the spirit of the doing, but the things done were made the subject, no more than a month from the date the Red Cross commissioner to Europe reached Rome, of appreciative reference by the Italian premier in his address at the opening of Parliament early in December. He, said: "Our soul is stirred again with appreciation and with admiration for the magnificent dash with which the American Red Cross has brought us powerful aid in our recent misfortune. We attribute great value to the cooperation which will be given us against the common enemy by the prodigious activity and by the exuberant and consistent force which are peculiar to the American people,"

Take a single example, more dramatic than most, but by no means unrepresentative of the way Italians and Americans have breasted together minor emergencies as they arose. The first two Red Cross men reached Rome on November S, and the first step they took was to appropriate money to the American Relief Clearing House, which enabled it to open that very night the first of two canteens for refugees at the railroad stations in Rome. Incidentally this was four days before Italian canteens were opened there.

At four o'clock one afternoon the volunteers who manned the canteens—Americans resident in Rome who have since become active members of the Red Cross staff—had a wire that 12,000 southbound refugees would pass through the Portonaccio station, six or eight miles out on the Roman Campagna. The first train would arrive at six o'clock. The refugees had been fed at Florence before leaving, ten hours before, and had had nothing to eat en route. The Italian authorities could supply the children with hot milk, the adults with bread and soup. They turned the rest over to the Americans.

#### Sandwiches Carved with Sabers

THERE was just two hour' leeway. The canteen workerjumped into motor cars. They bought 1,200 blankets; they
bought hams; they bought sausages; they bought chocolate.
They piled all this into the cars and made repeated trips to
the Termini station, where they secured permission to dump
them into the baggage-car of the Florence express, which left
on its northbound trip between five and six o'clock. In this
way they had their supplies out at the Portonaccio station
before the arrival of the first refugee train.

Here they found a squad of the Granatieri, an Italian regiment dating back to the seventeenth century. In the present war, so heavy has been their part in the fighting that it has taken 60,000 men to keep filled their ranks of 3,000. Tonight the Granatieri were armed with big knives, and from now until nine o'clock the next morning, when the last train went through, they turned huge stacks of bread into sandwiches, cutting the loaves into big chunks, slicing them and stuffing them with ham and ssusage.

Each train carried about 1,000 refugees, and the Grana-

tieri would no more than get a thousand sandwiches made up than a train would roll in. Then they had to work against time to be ready for the next train. And they did this for twelve solid hours and more as fast as men could work.

Perhaps, in a writing which cannot hope to speak of the hundreds of Italians in all walks of life who have worked shoulder to shoulder with the Red Cross men and whose cooperation has made their work possible, it may be permitted to cite one as personifying many. Giorgio d'Acarnia is the pen name of a young writer on the proposed Jugo-Slav state and the future of Poland. He is known also for his ardor on a certain battlefield where he was left for dead with a shrappel wound in his abdomen. Some later stretcherbearers brought his body to a field hospital, where the physicians in charge said that he was clearly dving. They turned, in their press of work, to more hopeful cases, and for a second time he was left at one side for the flicker of life in him to snuff itself out. It happened that Bastianelli, perhaps the greatest of the Italian surgeons-and Italy is famous for her surgeons in this war-came to that ward. "His case is hopeless," said Bastianelli. "Nonetheless, I want to try to save him." There followed the first of four major operations which brought the young author-soldier back to his people, a shadow of himself, with a great open wound in his side. That was eight months ago. He cannot go back to the front, but he still works on for Italy. It was Giorgio d'Acarnia who was in command of the Granatieri, cutting bread for the refugees, train after train, all that night,

Pouring rain beat into the open train-shed and through the doors of the cars. Rain was the one familiar of these contadini in all the strange places through which they were driven by the fortunes of war. It was pouring rain when they struggled down the black road from Udine. It was pouring rain when many of them were put off the trains into the atili at Florence, just as it was pouring rain when they passed through Rome on this, the next lap of their journey. It was pouring rain when some of them were transferred from ferry to train at Messina, and they stood waiting in the dark in the drench of it for two hours on the wharves. And it was pouring rain when others—or perhaps some of the same company—trudged after midnight up the interminable folds of road that lead to the mountain-top town in Sicily that was for a thousand and more their journey's end.

#### The Man Who Refused to Die

THEY came into Rome that night mostly in cattle cars, some of these transformed for the use of war into troop trains, but others clearly improvised for this trip, with benches taken from little northern schools and churches for seats. The American canteen workers could read the names of them in the station lights-"Santa" this and that. The great majority of the people, those who came in around midnight and after, had not eaten for twelve hours. The babies were crying, the few men that were among them were cursing, the women wringing their hands. The Americans, drenched to the skin in going from car to car, passed the sandwiches out to them. the hot milk for the babies, the soup for the adults, the blankets for the old and sick. And before each train had left the station, a young Italian officer, tall, slender, with a great open wound in his side concealed by his grey-green uniform. went from car to car, in the rain and the cold, inflaming their hearts with words of encouragement. Not once, so the canteen workers tell the story, but the trains rolled out with the people singing patriotic hymns, and cheering for Italy, for the allies, for America.

The American note has been struck in all this Red Cross work in Italy—not in a spirit of self-advertisement for the United States, but rather of assurance for Italians, to give them tangible evidence that in resisting invasion and in getting under its heavy load of civil distress the American people are with them; evidence not merely in sympathetic cables and distant girdings for war, but evidence expressed in such humble but convincing terms as surgical dressings and instruments for field and base hospitals, shirts and drawers and stockings for shivering limbs in aile and refuge trains, condensed milk for hungry babies, blankets and beds and stowes for homeless

A cart-load of peasant women and children on their way south

families in lodgings in the northern cities, in vacant villas along the seacoast, in country villages in Umbria, in old convents and monasteries in the South. There was genuine statesmanship in the call for combs which came from a Red Cross worker in Leghorn, and in the good sense of the American women in Florence who got together and made sanitary napkins far into the night. The sober officials of one Emiliano town were hopeless of providing bedding for the ten thousand refugees in their prefecture, but in the midst of their quandary they sent two visiting Red Cross inspectors on their way to a neighboring city in the municipal motor car, the firemen in brass-bound helmets on the drivers' seat, and the siren sounding as they scattered dogs and children. The Red Cross men caught the spirit of the new diplomacy when they sent the car back filled up with blankets from their stores at Bologna-from the people of the United States to the people of Italy.

#### Work of the American Consuls

MORROVER, the President of the United States is the head of the Red Cross; it is a semi-official organization, and it is quickly recognized in such international work as a natural channel for American resourcefulness and good-will. It is hailed not only as a piece of American enterprise but as America expressing herself. It was in truth a cable from the American ambassador to Italy that brought the first Red Cross men to Rome, and it was at the American embassy that they met with the committee of the American Relief Clearing House and mapped out together the first steps to be taken. Round Thomas Nelson Page all the early operations swung, his penetrating judgment of men, of organizations and cities:

Some of the refugees from the north were taken to the far south. The picture above is of a new hospital for children obened under the authority of the prefect of Naples

his swift strokes in portraying the main elements in the situation and his southern talent for establishing cordial relations for the newcomers with the Roman community and the forces of the national government, gave an unanticipated speed and precision to the rapidly expanding work. And it was from the ambassador's office, at that first day's conference, that despatches went off to American consult broughout Italy for information as to numbers and conditions of refugees. Money was sent that afternoon to consuls in cities known to have pressing need; within a week the ten consular districts had become, in a sense, the natural framework for the devicement of the civilian work outside Rome, and the consuls themselves the pioneer American relief workers.

Their efforts, naturally, took different forms in different districts. Consul Carroll at Venice found that the Posto di Conforto at Mestre, which was giving food and help to refugees and wounded soldiers, had reached its last day of operation, due to lack of means, and arranged for its continuance under the American flag. Next, he opened a Red Cross canteen at Chioggia as a first step in cooperating in that orderly evacuation of Venetian civilians which will be described later and into which he threw himself with characteristic Texan energy. Consul Dumont had enlisted a fellow countryman as the representative of the American colony in Florence in collecting money and clothing for the refugees, the Italian Red Cross established him as head of the clothing distribution service at the principal shelter near the station, and the consul next commissioned him to carry American Red Cross moneys to other cities in the district. Consul Winship, of Milan, brought to bear his experience in Petrograd in aiding Polish refugees at the time of the great Russian retreat of 1915. He became chairman of an active American Red Cross committee made up of American business men, which has opened a popular kitchen near the station (where 200 resident refugees are fed), turned a club house into an infirmary and rest home for women and children, is equipping and managing a dormitory for allied soldiers and is cooperating with the central city committee in promoting better housing and employment for refugees. Acting Consul Roberts at Genoa cooperated in organizing a similar committee there, which erected a chalet in the station, first for the service of refugees and now for that of troops in transit. Consul Grace in Legborn organized the systematic distribution of clothing, milk and cocoa at two asili, sheltering 900 people, and by personal inspection trips expanded the scope of Red Cross activities to Pisa and other towns in his district. Consul Haven at Turin in the North, Consul Honey at Catania and Consul Shank at Palermo in the far South, gathered information and established connections for the Red Cross representatives on their arrival: as did Consul White in Naples who, from the first, was an active participant in local undertakings for the refugees. In the course of November, 460,835 lire were placed by the Red Cross in the hands of American consuls either for direct use or transmission to local agencies which their activity had helped to create or their judgment sanc-

This is not the first emergency in which the American Red Cross and the representatives of the United States State Department in Italy have jointly served the purposes of humanity. At the time of the Messina earthquake, the American ambassador, Mr. Griscom, headed the American Red Cross committee which handled a million dollars contributed for relief and rehabilitation and constructed the American barracks villages at Messina and Reggio. The American consultant Messina lost his life in that disaster, and the American consultant Messina lost his life in that disaster, and the American con-

Members of the colonies brought down to the coast towns by the Venetian relief committee. Four families were housed in this summer place. For the first fortnight they were without blankets.

consul at Genova died from the results of exposure in the course of the relief work.

The promptness and efficiency of the American consuls in the present emergency will leave its impress on the whole trend of Red Cross development in Italy. It has been a factor in the decentralized scheme for civilian work which the temporary staff will turn over to the permanent commission. This calls for regional representatives, responsible to and receiving instructions from the headquarters in Rome, but capable of carrying a large measure of responsibility and of dealing with details under very general instructions. On the whole, the old regional divisions of Italy have been followed as they have been combined in the American consular districts, and as these in turn must be modified for an organization for relief rather than for commerce. The American consuls will be recognized as bearing an advisory or honorary relation to the work in their districts, and their cooperation will be enlisted in making contacts with local officials and in matters in which intimate knowledge of the community will be useful

The nine districts, as experimentally organized, follow: the war zone, headquarters at Padua; Lombardy, headquarters at Milan; Piedmont, headquarters at Turin; Liguria, including the Mediterramean shore of Tuscany, headquarters at Genova; Tuscany and Emilia, except the two coastal regions, headquarters at Florence; Venetian colonies along the Adriatic, headquarters at Rimini; central Italy and Sardegna, headquarters at Rome; Campania, Basilicata and Puglia, headquarters at Naples; Siçili van Calabria, headquarters at Palermo.

Another factor which made for this decentralized scheme of development was the division of labor effected at the outset with the American Relief Clearing House, on the presumption that the latter would later be merged with the American Red Cross. The Clearing House had been formed for a very definite purpose, that of organizing and transporting supplies

for hospitals. When the line gave way, it was suddenly called on for supplies to help care for the double stream of refugees—civilians and wounded soldiers. It cleared out its warehouse the first week, ran out of funds and wired to the Red Cross. The division of labor was simple: in relief work the Red Cross was to plunge into work in the provinces; the Clearing House, with its committee of local Americans and with a prompt appropriation of 100,000 lire from the Red Cross for the immediate purchase of clothing, blankets, food, etc., was to work in Rome.

#### The Red Cross Chips In

REFERENCE has already been made to the canteen opened by the Clearing House at the Portonaccio station, out on the Campania, through which the southbound stream of refugees first passed. In little more than a week, lest refugees should congregate in great numbers at the capital, the line of transport was switched to the route south along the Adriatic, and this canteen was transferred, under Red Cross suspices, to Ancona.

Refuges assigned to Rome, or to be distributed in the neighborhood, came in at the Termini station. The government had requisitioned nearby hotels and gave them a small allowance for food, but they had difficulty in obtaining it. The first night, the Clearing House canteen here fed 700 persons, and in four days the number eating its evening meals had reached 1,200. The Giornale d'Italia, one of the leading newspapers of Rome, had a popular subscription going and in conjunction with the municipal committee was providing breakfasts and, through a ticket system good at certain shops, gave out clothing. The subscription had reached 350,000 lire when, that first week, the American Red Cross chipped in 100,000 lire to the fund. That—for such is the psychology of newspapers and newspaper readers the world over—put

tions from Italian sources to many times the Red Cross gift.

Two weeks later the Red Cross made a third and still larger gift to Roman activities-one of one million lire, to the Comitato Romano di Organizazione Civile, which has been carrying on widespread relief work for the benefit of soldiers' families and stood ready to bring refugee families within the scope of its activities. These include creches and maternal schools for children whose mothers are at work-one of them tucked picturesquely under the shadow of the old wall-an asylum for children whose mothers are not living and whose fathers are at the front; a workroom, employing four or five hundred women on tents and army clothing; popular kitchens for serving meals (many of them free, on a ticket system). and higher grade economic kitchens for the distribution of cooked meals at cost or less-all of them so many points of attack on the problem of livelihood which the war, the stopped earnings of the men, the high cost of living, and now the coming of the refugees has rendered acute. Nothing, as the leaders in these activities saw it, would count for more in maintaining morale at the front than for the men in the trenches to be sure that their families, whether refugee or merely left behind, are not suffering this winter.

#### Organization on the French Model

MEANWHILE the work in the provinces and the organization of a temporary headquarters staff had gone forward. Under a deputy commissioner, who had helped to shape the development of Red Cross work in France, its three main divisions were rapidly duplicated here-military affairs, civil affairs and administration. The military department was put in the hands of an American who, since the first year of the war, has been one of the seven engineers of a medical supply service reaching between three and four thousand French hospitals and entering into every sphere of army activity from the advanced dressing stations to sanatoria in the south of France. The civil department was put in the hands of a former member of Mr. Hoover's staff in Belgium, now chief of that bureau in the French organization of the Red Cross which deals with relief and rehabilitation in the war zone. Stores and transportation were put in the hands of the organizer of the Red Cross warehouse system in France: purchase in those of the Italian buyer for a large American house doing business throughout Europe; finance and accounting in the hands of the treasurer of the Red Cross organization in France. controlled by a New York trust company; and general administration in those of a Detroit business man whose years of experience in the management of chemical industries has latterly been translated into building up for the Red Cross a supply and furniture-making center in the heart of the devastated area recovered by the French last spring. Passport, cable, railroad, employment, filing and other services were rapidly set in motion in offices in the Palazzo Doria turned over to the Red Cross by the Banca Commerciale, through an American member of its board of directors.

Other Americans in Rome were quick to volunteer their services and English-speaking Italians were equally cooperative. Certain members of the Clearing House Committee proved invaluable as traveling inspectors. Within a month, a temporary satisf of sixty-five people were at work. This included the delegates in the field, who were mustred from whatever quarters they could be obtained and sent out as rapidly as they could be mustered—officers and students of the American Academy, the secretary of a sugar company, a Pennsylvanian who had been farming in Umbria, artists, architects, men of leisure from Florence and Sicily, a doctor

## THE EMERGENCY RELIEF COMMISSION TO ITALY

#### Of the American Red Cross

Director: Major Grayson, M. P. Murphy, O.R.C., U.S.A., commissioner for Europe.

> Edward T. Devine, chief of the Bureau of Refugees and Supplies of the American Red Cross organization in France.

Representatives:

Ernest P. Bicknell, director of the Department for Belgium. Paul U. Kellogg, editor of the Sur-

December 22, 1917.

TO THE MERSHERS OF THE EMERGENCY COMMESSION TO ITALY: It falls to the lot of few men or women in the world to play a real part in one of those supreme events on which the course of history depends. This privilege has been given to you. In time to come you will look back on your work of the past few weeks with a satisfaction which you may not now appreciate, for you have had a rare and wonderful expendence of the past of th

The measure of your achievement is not its physical proportions. Much more could have been done than you had means to do. Much of what you have done could have been done better had time permitted the construction of a larger and more effective organization. But you return to your permanent posts leaving cheer and comfort and confidence in Italy that would not have been here without you, and knowing that two great peoples are closer together and more effective in the war for liberty than they would have been had you not come.

In the hour of deepest distress, you carried from our country to our Italian allies a message of militant comradeship, and the value of that message, coming when it did, no one can ever measure.

Very sincerely yours,

G. M. P. MURPHY. Major O. R. C., U. S. Army, A. R. C. Commissioner for Europe.

## THE TEMPORARY RELIEF COMMISSION TO ITALY

Carl Taylor, general manager.

Edward Eyre Hunt, head of the Civilian Relief Department.

Dr. Alexander Lambert, in charge of medical relief.

of letters from the Sorbonne, a physician, a teacher of philosophy and one of sociology from the Civil Affairs Department at Paris, a social worker and a clergyman resident in Rome, a sanitary engineer back from Red Cross work in the Balkans, and so on. Knowledge of Italy and Italian, executive experience and acquaintance with civil or military relief work they had in combination, this scratch organization, but scarcely one of them possessed all three qualifications—some two; yet they pitched in with spirit and were quick to respond to the promptings of the picked men sent out to organize the work.

Early in the first week, two American business men from the industrial district in northern Italy, met with the Red Cross representatives in Rome and together drafted a scheme for a citizens' committee in Milano. That night they left for Genova, where they organized a similar committee in the morning; they met with their Milano group in the afternoon: and on Wednesday, or two days after the Red Cross opened work in Rome, full-fledged American Red Cross committees were at work in these two important northern centers.

Meanwhile reports were coming in by wire and letter from

## THE PERMANENT ITALIAN RELIEF

#### Of the American Red Cross

Commissioner for Italy: Robert P. Perkins, president of the Bigelow-Hartford Carpet Co. of Connecticut.

Deputies:

Chester H. Aldrich, architect, New York city. James Byrne, New York city, legal adviser. Dr. Joseph Collins. New York city. med-

ical director.

Ernesto Fabbri, banker, New York city.

Samuel I. Fuller, banker, New York city.

Samuel L. Fuller, banker, New York city, financial director. Guy Lowell, architect, New York city.

Thomas A. L. Robinson, Youngstown, O., director of supplies. Prof. Lightner Witmer, psychologist, University of Pennsylvania.

Rev. Sigourney W. Fay, Catholic priest, Wynnwood, Pa.

Included in the general organization personnel:

Louis A. Davis, Philadelphia, office manager and general secretary.

William E. Hereford, New York city.

Julius Roth, New York city, transportation.

Edgar I. Williams, New York city, secretary.

the consuls, asking for money, saying how they could use it, showing the need for personnel. On the civilian relief, with a staff to be created out of thin air, with the railroads congested and with no man knowing how long the stream of refugees would keep up, the administrative problem was one of limiting effort. The director of civilian relief got down a railroad map and built his early program on the transportation centers in that belt through which the stream was flowing south and west: Genova, Milano, Florence, Bologna and, after them, Rome, Ancona and Naples. He decided to limit the civilian work to emergent relief at the start, to limit emergent relief to that which could be carried on at the stations, and not to attempt anything with respect to the care and lodgment of refugees at the points of settlement until their needs in transit had lifted. Moreover, he ranked the wants of the spirit quite as real as those of the body, and the railroad stations offered vantage ground from which to fly the Stars and Stripes and Red Cross flags and show that Americans were here and helping.

At the end of two weeks the director could report that teams of Red Cross workers had established soup kitchens at or near the stations in Rome, Ancona, Genova and Milano; that the Red Cross had sent clothing and bedding for refugees to Florence, Leghorn, Ancona, Catania, Genova, Bologna, Rayenna and Naples: that it had contributed funds for the purchase of clothing to local committees of the Italian Red Cross at Florence, Bologna, Ancona, Genova, Naples, Palermo and Bari: that it had provided funds for relief work to American consuls at Florence, Venice, Milano, Genova, Leghorn and Catania: that in addition to the large gifts mentioned earlier. it had authorized the equipment and maintenance of a 150bed refugee home in Milano and a chalet at the railway station in Genova, organized committees as noted at those two cities and established resident delegates in Florence, Bologna, Ancona, Milano, Rome and Naples.

The following shipments of moneys or supplies to three

cities will illustrate the type of help that was going out from Red Cross headquarters up to December 1:

To Apcons-Nov. 10 Lire 5,000 for refugee clothing 12 100 cases condensed milk Lire 5,000 for refugee food 15 Lire 2,000 for refugee clothing 100 cases condensed milk Lire 5,000 for refugee food 20 21 1,395 blankets, 25 mattresses To Florence-Nov. 9 Lire 50,000 for refugee relief Lire 10,000 for refugee clothing 10 502 mattresses 20 20 1.000 blankets Lire 100,000 for refugee relief 27 3 flags 17.262 articles of clothing 30 Lire 25,000 for relief

To Leghorn

Nov. 10 1,190 articles clothing 10 2,000 blankets 10 Lire 50,000 for refugee relief 12 100 cases condensed milk

20 100 cases condensed milk 24 16,996 articles clothing 24 1,007 blankets

26 Lire 18,000 for purchase of blankets

By the first week in December, the stream of refugees which had been dwindling, practically stopped; but with no certainty as to when it might come again in flood, provision for refugees in passage and in the larger cities continued for ten days longer the major concern at headquarters. At the same time, as public attention in the large cities shifted from the needs of those passing through to those who were to remain, as the refugees were spread out in every province from the provincial centers to the smaller places, and as the great residue were shipped and settled in the South, clothing appeals began to reach the Red Cross from all directions, and the questions of hospital provision, of shelter and employment, pressed in in countless local embodiments.

#### An Unmatched Mission of Help

This had not been unanticipated, and on November 20 the commissioner for Europe had despatched a committee of three to make a quick survey of relief needs throughout Italy, as a basis for permanent organization and program. Here again, the resources of the Red Cross organization in France and Belgium were drawn on, the senior members of the committee being the two executives and social workers who set the standards for American emergency relief in the San Francisco and Ohio flood disasters, one of them now chief of the Bureau of Refugees in the Department of Civil Affairs, at Paris: the other the director of the Red Cross Department for Belgium. The committee visited Venice, Vincenza, Padua, Verona, Milan, Turin, Genova, Modena, Rimini and Florence in the North; Naples, Messina, Palermo and Catania in the South; spending ten days on the north trip and five days in the south. inspecting asili, kitchens, lodgings, work-rooms; interviewing members of the cabinet, prefects, mayors, relief-workers, bishops, generals, consuls, physicians-all that personnel which, because of official duty or private good will, or both, had been thrown in contact with the southbound stream of fugitives or were facing with them the immediate problem of taking up the burden of life in their new surroundings.

Perhaps no such mission of help has ever been the duplicate of this, from the half deserted quays of Venice to the cluttered tenement streets of Naples, from the low farms back of the armed banks of the Piave to old monasteries turned refuges on a Sicilian mountain top. But rapid as the trip was, and picturesque, its distinction lay in that combination of investigation and action on the spot which has been characteristic of Red Cross development in France since last June. The committee carried over 500,000 lire. It put sufficient money in the hands of Consul Carroll to enable him to contribute in a large way to the orderly evacuation of Venice; contributed to the emergent relief fund needed to tide over an unemployment crisis in Padua, from which city various industries had been removed; gave quick help to a provincial committee at Vincenza which was caring for a large number of destitute mountain folk who had come down to the neighboring farms; turned over a sufficient sum to the American Red Cross committee in Milan to enable it to work out a general program, founded a Red Cross hospital and health center among the new Venetian colonies at Rimini; made a gift to the Italian Red Cross at Catania to enable it to succor refugees destitute of clothing and bedding in the small Sicilian villages; and left working funds at Naples and Palermo to promote better lodgings and employment for refugees.

On December 8 the committee submitted its report, giving in brief compass, for the benefit of the new commission, a general survey of conditions, the urgency of needs scarcely less bitter than those of the refugees in transit, and the constructive lines of work which, on the basis of experience in France and Belgium might stave off and prevent some of those persisting ills which beset fugitives even among their own people. Of these more later.

## A French Garden-Hamlet

### By Georges Benoit Levy

FOUNDER OF THE FRENCH GARDEN CITY ASSOCIATION

JEANNERET, one of our most original architects, has succeeded in creating under the abornmal conditions brought about by the war small scale, nevertheless establishes a new model in perfection of detail.

The watch-making establishments of Duverdrey and Bloquel at St. Nicholas d'Aliermont, having developed the production of war materials, wished to provide wholesome and pleasant housing conditions for their personnel. They secured the services of M. Jeanneret, who had already made a name for himself at the Chaux de Fonds in Switzerland by the originality of his work.

The estate is situated in Normandy on high ground. Its size is only about 1000 by 350 feet. It faces the branching of two main roads and is surrounded by pastures and set off, on one side, by a wood. It is divided lengthways by a thoroughfare consisting of a road eighten feet wide, bordered by two strips of lawn, twelve feet six inches wide and tree-planted, and two sidewalks of thirteen feet wide, from which the front gardens of the houses are separated by living hedges. This street ends in a playground of about one hundred and eighty square yards.

The advantage of this disposition will readily be seen: Roads which are inexpensive yet are wide enough, preserving the rural aspect of the estate; houses situated at the end of a garden and in the central artery linked together by a long path which, on the one side bordered by a strip of lawn, runs

KITCHEN AND LIVING ROOM OF A FOREMAN'S HOUSE

on the other along orchards and vegetable and flower gardens.

The lots are so arranged that the houses face east and west. Their ninimum size is a little short of a thousand square yards. Belinin each house there is a backyard, sufficiently private, upon which opens the small laundry where all the heavy work of the house is done. The windows are only four feet three inches high but nine feet eight inches wide. By their situation, the houses are exposed to the sunlight on one side or another all day.

Account had to be taken of the dominant sea winds, which made necessary a low construction. The planning demanded a roof not too low to contain attic rooms. Neither ornamentation nor molding was resorted to to bring out architectural features; the disposition of doors and windows, and of the gable ends, alone contribute to the beauty of the elevation

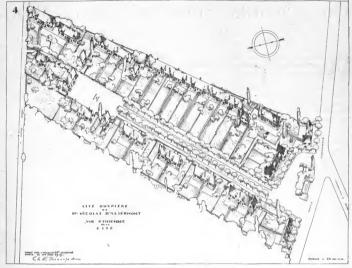

As regards the interior plan, two types of house are provided. The first contains a kitchen, also serving as dining room, and a large hall from which the staircase rises directly to the second floor; behind the kitchen the laundry and the food pantry; on the upper story two bedrooms, toilet and bathroom. The second plan is similar, but with an additional room on each floor.

Owing to lack of coal to bake the clay, the use of bricks had to be abandoned and hollow tiles of concrete to be used instead. These are made with three air cushions and not quite ten inches thick; they are manufactured on the spot with the aid of two hollow tile machines.

Nearly all the houses are semi-detached. Those of the first type cost about \$1,725 (10,000 francs) and those of the second type about \$2,600 (15,000 francs), very nearly twice as much as they would have cost before the war. To give an

LIVING ROOM OF A LABORER'S HOUSE

BIRD'S EYE VIEW OF THE VILLAGE

idea of other prices, frame work in this locality is offered at over two dollars the cubic foot (450 frames per cubic meter), The company of the Duverdrey and Bloquel works therefore decided to carry out all the work themselves and have courageously entered the trades of mason and carpenter.

One of the houses will be equipped with model furniture to serve as an inspiration to the future householders. Alto-

gether between fifty and sixty houses are being built. The illustrations show some of the types. It occurred to us that this modest little garden village might be of interest to American readers, partly because of the difficulties which had to be overcome in its construction and partly because of the resourcefulness shown by the architect in making the best of very severe restrictions imposed on him.

FRONT, BACK AND SIDE ELEVATION OF A PAIR OF COTTAGES

## The Scientific Spirit and Social Work

By Arthur J. Todd

PROFESSOR OF SOCIOLOGY, THE UNIVERSITY OF MINNESOTA

E may assume with considerable assurance that social work sets for itself a huge and intricate problem. Whether it is a fully fledged profession or only a profession in the making is of no importance to this present discussion. The real point is that the scientific spirit is necessary to social work whether it is a real profession or only a go-between craft. The cat is now out of the bag, but where has she jumped? No matter, but the mere opening of the bag starts a throng of questions. Chief of these I find in my own mind to be: Why do people want to do social work, particularly if it is so hard and so comprehensive? Is it, perhaps, as the cynically-minded claim, because of the "supply of the unfortunate to exercise their virtue on?" Or because they "conceive service as a kind of exploitation of mental inferiority, and so find a moral satisfaction in the thought of intellectual poor whom they will have with them always?" Are we absolutely sure that this is cynicism, or may it not be genuine moral probing? Perhaps, however, I had better put the question this way: How can you get people to do social work?

Back of all true social work must stand the impulse to serve. But whence is it to come? It is natural, you say. I grant that some psychologists claim we all have an instinctor seeing others well offi. That was what Clifford ment by the "voice of Man within us, commanding us to work for Man." But unfortunately there are other voices within us commanding us to steal from, and lie to, and exploit, and otherwise abuse our fellow men. Our instincts never run along a smooth even road in one direction. They cut across and jostle each other forcely. Instinct can never be swallowed raw as an explanation of noble or even fairly decent human conduct. It must always be liberally salted with discipline and education before taking.

Experience and training have shown men that some form of mutual service contributes to social and personal well being. The original instinct to serve, however, had to be brought out through a long process of holding the lid down on other rival instincts. Mere instinct and emotion are blind and unsafe guides to conduct. That is why so many of us land in the ditch with our benevolent schemes. That is why I am so suspicious of appeals to act on impulse. That is why I deplore such sentimental calls as appeared in the press on February 29. 1916. We were urged by the president of a group of benevolent women to gain a day. How? In her own words: "A chance will come to every one to do something charitable that day. Let us do as our first impulse tells us. For once let's not consult what we call our 'better judgment' nor use 'scientific charity' in what we do for others. Let's do more sunshine and less charity." Such talk is simply the call to "go on the loose." It is precisely the same psychological path that impels men to get drunk or to fly at each others' throats in war. Civilization is the result of the illuminated and disciplined will. There is no unerring instinct to do good. To depend upon mere feeling or impulse is to revert to nature, to eighteenth century mythology, Rousseau, and the cult of the "happy savage."

But if the impulse to serve is not instinctive, shall we say it must be religious? Is it not the dynamic side of faith? 490 Recall that famous chapter on the nature and fruits of faith in the Epistle to the Hebrews. Abel and Abraham and Moses. Joseph, David, the prophets and many another worthy "who through faith subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valiant in fight, turned to flight the armies of the aliens," were impelled to service through religious fervor. But like many other social workers they seem to have failed of their full reward-if we may judge from the somewhat cynical comment of the narrator of their trials. The religious motive has always been one of the strong forces back of the impulse to social amelioration. Hebrew and Chinese and Hindu sacred texts teach it. Christianity fostered certain types of charity. The Calendar of Christian Saints is redolent with them. Not a little of the best in so-called organized philanthropy (both spirit and methods) is traceable to the work of St. Vincent de Paul. The preaching of such men as Channing in New England during the thirties and forties of the last century fed the new tide of humanitarianism which brought us broader and more decent care of the afflicted, particularly the defectives and law-breakers.

But neither instinct nor religion is sufficient; neither confers capacity, necessarily. Vincent de Paul's great work may be said to have begun by recognition of this principle. You remember his first case: a benevolent lady had asked him to recommend to his parishioners a certain needy family. He did so at the morning service. In the afternoon he visited the family himself only to find them already almost overwhelmed with gifts of food and money. "Behold noble but ill-regulated charity," said the saint, and set to work at once to make the benevolent impulse effective through That was the scientific spirit, vision and organization. Again, Channing's preaching was not the only spring that started Dorothea Dix upon her marvelous crusade on behalf of the insane in our country. For years, notable doctors had been importing the ideas of Pinel from France and Tuke from England. And for three years Miss Dix studied these new, scientific methods of treatment for the mentally defective. It was this new, precise knowledge that gave some solid backing to her fervid moral enthusiasm. Her science guided her religion and made it efficient. Indeed, I am not sure but that it was science that drove her to the work and religion which served as ally.

At any rate, science does create the will to serve. The new knowledge of heredity has stimulated a whole tribe of eugenists, however mistaken they may prove to be. The more scientific the art of healing becomes, the more it becomes permeated with a sense of community duty and service. The newer developments of economic science and sociology have impelled us toward conservation of natural and human resources, labor legislation, health and sanitary work, protection of children, control of industry for social ends. Science yields place to no other source of enthusiasm for social amelioration. And science has her heroes. It would be easy to write the litany of scientific martyrs—Priestly, Lyell, Tyndall, Darwin, Huxley, Hacckel, Reed, Reed,

Laveran, Manson, Ross, Lazear, Carroll and a hundred others, who were stoned and sawn asunder, were tempted, destitute, afflicted, tormented, slain, like their brethren of religious faith.

But the glory of science is that to enthusiasm it adds a new quality. Let me illustrate: The impulse to serve, I said, must be present; otherwise there is no motive power. But the impulse alone is not enough. Volunteers by the million would never make an army. An army of raw recruits is actually worse than no army-it is in the way: it has to be transported, it clogs the service; it has to be fed, and takes food from abler mouths; it gets in the way of trained men; its own fears may stampede the regulars into rout and confusion. Only training, exacting, rigorous training, can make over the mob of recruits from a liability into an asset. That training is military science. Likewise, the hundreds of volunteers responding to the call to enlist in the social service army against needless want and misery must be trained lest they remain mere cumberers of the ground. That is what I mean by the application of the scientific spirit to social work. The new quality which science adds to the impulse to serve is ordered intelligence, the discipline of knowledge. "If science does not produce love it is insufficient," wrote Amiel. I believe it not only enlarges the area of man's sympathy-that is, his love-but makes it effective. "Scientific" is not the logical opposite of "loving" or "warm," or "hearty," or "brotherly;" the real antipode of these qualities is mechanical routine.

Perhaps we should pause to run down to its lair the fearful word science, and say exactly what we mean by the scientific spirit. Huxley said, "Science is nothing but trained and organized common sense." Isn't that a good deal? A trained and organized mind in contrast with a mental scrapbag; a disciplined army as against a motley, rambling mob. Science in the most generally accepted sense, like humor, is the detection of relationships; it is the relating of cause to effect. This means two things: first, that the scientific mind is always full of problems; it never takes things for granted; it never contents itself with fatalistically and complacently accepting effects. This means, it is evident, in the second place, that everything is caused by something else. Shakespeare makes Pisanio in Cymbeline say that "fortune brings in some boats that are not steered." Science denies that absolutely and irrevocably, if the lack of steering implies that ships just wander into port, moved by no forces but chance. The spirit of science was nobly expressed by Matthew Arnold in the couplet:

"Yet they, believe me, who await

No gifts from chance have conquered fate."

The main business of science is to rid the world of chance and luck. Our forefathers charged their sickness and poverty and pain to bad luck, hostile ghosts, an angry god or a fickle goddess. Take down your Shakespeare Concordance and see how many hundred times his creations talk of fortune, luck, chance. Listen to the uncomplimentary, even vile names they call her-crooked, blind, skittish, a foe, a strumpet, and worse. Remember that all primitive philosophy, politics and religion are based to no slight degree upon luck and magical devices for controlling it. Even now men persist in the same unflattering concept of Providence by inserting in their contracts exemptions from responsibility in certain business contingencies involving what they are pleased to call "acts of God." Earthquakes and herce tempests at sea are acts of God. Poverty is one of the mysterious ways in which Providence works his wonders to perform. Pestilence is a divine scourge. War, God judging the nations. Now, modern science is vastly too respectful, too devout, too well informed to perpetuate such childish attempts to connect effect and cause. Therefore in ridding the world of chance, it works in two ways—critical and constructive, Huxley has phrased both these aspects in his letters. In one he says, "Among public benefactors, we reckon him who explodes an old error as next in rank to him who discovers new truth." On the constructive side he writes, "To be accurate in observation and clear in description is the first step towards good scientific work." In sum, the work of science is to get at truth j not only at facts, but at the vital relationships between facts.

Science does not claim to have complete knowledge of the truth or to have established perfect order out of chaos in this world. It is less an accomplished fact than an attitude. Professor Sumner suggests this in his definition of science as "knowledge of reality acquired by methods which are established in the confidence of men whose occupation it is to investigate truth." Hence, in connecting science with social work, our aim is not so much immediate results as an attitude of mind; for, as Huxley pointed out, "The scientific spirit is of more value than its products, and irrationally held truths may be more harmful than reasoned errors." This does not mean, of course, that the scientist does not strive to know the greatest possible amount of truth. He is no mere dabbler or dilletante. Scientific truth is a serious business and cannot be achieved as you order goldfish or libraries or art galleries. You may buy a college degree or the Godbless-you's of a poor family, but you cannot buy the scientific attitude. Science, like the wisdom of Solomon, is above rubies and cludes all but the resolute, serious hearts,

Carlyle, in spite of his frequent wrong-headedness, was one of the best friends to social work raised up in the last century; not by the institutions he founded or the technique of family rehabilitation he worked out, but by his unflinching determination to see through the social shams of his time and to purge our systems, and his own, of cant or drivelling. Such an acid test transforms mere vague opinion into dynamic opinion. It makes for the scientific spirit by refusing absolutely to allow any institution or idea or practice to take refuge behind somebody's mere say-so, or to be frightened by the cry that it is old or sacred or in the nature of things and therefore not to be molested by mere man.

The scientific spirit refuses to call a hope or a longing a proved fact, no matter how urgent that longing or that hope may be. I may long to see parole work done with a hundred per cent efficiency; but that does not justify me in publishing that 95 per cent of my paroled men "make good" after leaving the prison gate. Much as I might have wished for a better showing, I was never able as a probation officer to claim more than one-half or two-thirds of my cases as successful. I may abhor the sight of painted women selling their bodies on the streets, but that does not justify me in saying that mere repressive legislation or policemen will wipe out prostitution. Science bases its hopes on facts. It refuses to rest its case on the leadings of mere temperament. Huxley said, "Science seems to me to teach in the highest and strongest manner the great truth which is embodied in the Christian conception of entire surrender to the will of God. Sit down before fact as a little child, be prepared to give up every preconceived notion, follow humbly wherever and to whatever abysses nature leads, or you shall learn nothing. . . . My business is to teach my aspirations to conform themselves to fact, not to try and make facts harmonize with my aspirations."

There are several other concrete marks of the scientific spirit which should be considered. It is broad, tolerant, earnest, imaginative, enthusiastic but poised and self-controlled. It is not impatient of contradiction and criticism given honesty and sincerely. It is fearlies, truthful, teachable. It is able to withstand mob-mind, sentimentality, sensationalism and perty partisanship. It does not deny that a thing exists merely because it is not easily seen; but it refuses to fudge intelligence and the moral nature by claiming to see something before it really is seen. It also declines to think "the difficulties of disproving a thing as good as direct evidence in its favor."

Finally, the scientific spirit means generosity, fellowship and hearty cooperation untainted by jealousy. Witness, for example, the cordial feeling between Darwin and A. R. Wallace. Wallace always spoke of the "Darwinian theory" although, since he was the co-discoverer of natural selection. it might with equal justice have been called the "Darwin-Wallace theory" or the "Wallace theory." Likewise Darwin, with fine generosity, recognizing that Wallace's splendid contributions to natural science brought him little financial return, set in motion a plan for securing a civil list pension for Wallace, who was at the time nearly sixty. Huxley was equally generous and enthusiastic. He lent his heartiest support and was able a few weeks later to hurrah over the success of the plan. A similar bit of generosity occurs in Huxley's undertaking the task of writing a chapter on the work of his old opponent, Sir Richard Owen, for the latter's biography. As a final instance let me cite the generosity of eighteen of Huxley's scientific friends who in 1873 placed £2,100 in the bank and informed him that he was forthwith to take a vacation for his health.

It is this fine spirit of cooperation, according to H. G. Wells, that has made modern science, "The whole difference of modern scientific research from that of the Middle Ages," he says, "the secret of its immense successes, lies in its collective character, in the fact that every fruitful experiment is published, every new discovery of relationship explained. In a sense, scientific research is a triumph over natural instinct, over that mean instinct that makes men secretive, that makes a man keep knowledge to himself, and use it slyly to his own advantage. The training of a scientific man is a training in what an illiterate lout would despise as a weakness, it is a training in blabbing, in blurting things out, in telling just as plainly as possible and as soon as possible what it is he has found. To 'keep shut' and bright-eyed and to score advantages, that is the wisdom of the common stuff of humanity yet. To science it is a crime. The noble practice of that noble profession, medicine, for example, is to condemn as a quack and a rascal every man who uses secret remedies." And the same spirit must animate social workers if they are to make their work truly scientific and really professional.

Most professions, whether law, medicine, preaching or teaching, begin with the assumption that all a man needs is knack, luck, nerve and persistent industry. Their professional aims are at first usually personal success and social spirit they rise out of mere crafts, and change both their aims and their methods. The community spirit and a professional code are both cause and effect of their improved technique. Social work has been going through just these throes of development. Hence it is almost superfluous to ask why social work should take on the character of science. It is hardly a question of may or may not. Rather, should

we say, it is a matter of the categorical must. Is it shocking to declare that one must do good according to scientific rule? The highest praise accorded to Jesus of Nazareth is that he went about doing good. Do I believe he did it "scientifically?" I do, most emphatically. For the good is always relative, and to choose between the good and the best demands an illuminated and disciplined intelligence. A very considerable section of Christendom today believes that Jesus was the most scientific pierson that ever trod this globe. Science made his good work discriminative.

If you demand a concrete and explicit answer to the question, Why should social work be done in the scientific spirit? I should say, for two reasons: It is a dangerous, if not to say extra-hazardous trade, from the standpoint of the worker himself; and it is a delicate and even perilous adventure from the standpoint of those whom social workers would serve.

Anybody who has ever tried to befriend the poor, the sick, the broken in spirit, the down-and-out, knows the tremendous strain on body and nerves. The constant tugging at one's sympathies, the recoil of disgust at the sight of filth, disease and broken character, the lurking possibility of contagion, the discouragement over failure after faithful ministrationall these wear down the fine edge of one's good will. It is easy to get the scolding habit, to develop a spirit of moral peevishness, to assume the rôle of apostle, to exaggerate one's own sense of amiable virtues by constant contrast with the lives of those whom we may suppose to have wasted income and opportunity. The persistent giving of good advice is subtly degenerative to one's moral nature. Good people must beware of misinterpreting the maxim about man's extremity being God's opportunity. Man's extremity never means the doctor's or the preacher's or the social worker's opportunity for bossing and humiliating. On the other hand, if one escapes the Scylla of nagging, it is easy to fall into the Charybdis of complacency; then you have a sentimental Good Fellow, masculine gender: Lady Bountiful, feminine gender. If I were a "case" being "friendly visited" I should prefer the scold. And the danger to sound social policy is greater from the Good Fellow, for he means-enter the patron, exit the real neighbor and good citizen.

The scientific spirit does away with obtrusive personality; it pours a healthy astringent upon one's ego. It broadens our sense of personality until we get the idea firmly fixed that we are merely representing the best thought of the community and are not exploiting our own vanity upon the poor and needy. This is a very subtle temptation and can only be met by rigorous scientific self-immolation. Another hazard grows out of nervous strain and the air of patronage: this is the tendency to measure one's courtesy and good manners by social ranks. Discourtesy is no longer a good business asset. Even railroad ticket agents are being trained to say, Thank you. But in the older relief type of charity a certain kind of waspishness and thinly veiled contempt still survives in places. I have never forgiven a prominent Boston charity worker for snapping her fingers in the face of an applicant for aid in San Francisco during those strenuous rehabilitation days after the disaster of 1906. I do not know whether the man's case was worthy or not; but I do know that no real scientist would so forget the common decencies. I have before me a postcard written to a poor woman by the milk and ice association of an eastern city. It disdains all friendly salutations and reads simply: "If you do not report at regular Mothers Meeting Friday or Saturday, July 23 or 24 at 10 A. M. at Blank Building, your

milk will be stopped." It ends likewise abruptly without even the dry courtesies of a business letter. Does social service mean such forgetting of ordinary manners?

St. Francis of Assisi, patron of relief workers, saw the value of courtesy. "Know, beloved Brother," he once said, "that Courtesy is one of the essential qualities of God, Who maketh His sun to shine and His rain to fall upon the just and upon the unjust, through Courtesy; and Courtesy is also the sister of Charity, which puts ont Hatred and preserves Love alive."

As an antidote to the personal dangers of social work, and as a rough statement of the scientific attitude, I might add a sentence from the veteran head of the New York School of Philanthropy: "What charitable visitors need more than money in their purse is faith in their poor, humility of spirit, jolly comradeship, sheer psychic power to carry conviction for the right and sensible action against every argument springing from discouragement or bitterness or suspicion; from ignorance or stubbornness or weakness; even against such plausible arguments as arise from the very virtnes and sound institutes of the poor."

Charitable relief of all sorts is a difficult and delicate job whether you consider the recipient or the community at large. Medieval charity often bred beggars. Cash donations from either private or public funds may induce chronic naunerism. Personal service may easily cause a poor family to lose its self-respect and to "get limber." Private charities have been known to compete for the care of familiesnot for the sake of the families but to enhance their own prestige. Private charity sometimes pulls against public agencies, and vice versa. During the winter of 1914 certain families in Pittsburgh were aided by several settlements. benevolent individuals, and private charity societies; none of these agencies knew that others were interested; each thought it was in control. Finally, to complete the mess, the policeman of the district went about from house to house "to ascertain the needs" preparatory to a raid on the city treasury. To make confusion worse confounded, the city was suddenly caught in the throes of a "bundle day." One poor woman left a job bringing her in two dollars a day and stood for three bitterly cold days in a line at the bundle warehouse. When she finally got inside, all she could find was a bundle of old clothes worth at most fifty cents. Such charity is not only unscientific, it is criminal. So is the charity that makes each family or case the vested interest of a benevolent individual or society. So is the system of township relief as it used to be administered in New England. where whole towns were pauperized and corrupted. Illustrations might be multiplied ad nauseam.

But how can the scientific spirit in charity lessen its hazards? Chiefly by developing the rigorous determination to see clearly. That means thinking through each problem. The first distinctive test of a scientific worker is his ability to see and formulate a problem clearly. This is diagnosis equally in medicine, in law, in education and in social work. It is hunting out cause and effect in all their ramifications, whether the problem be restoring a family to economic independence or writing social insurance laws on the statute books. It is refusing to be bliffed by what "everybody believes." Remember that "everybody" used to believe in witches, in possession by devils as the cause of insanity and erilepsy; "the best people" until recently believed that drink caused ninety per cent of all poverty and crime, and that unemployment was a matter of downright personal laziness.

Many people still believe that eighteenth century English work-people were debased wholly by the English system of public relief; they forget all the other forces contributing to that degeneration. Many good charity workers also still profess to believe, because Mayor Seth Low and his associates abolished public outdoor relief in Brooklyn in 1888, that public relief is necessarily corrupting. The average person still believes that because United States military pensions have been grotesquely extravagant, all other forms of public insurance or pensions are necessarily vicious. For the most part these opinions are simply swallowed. But no real scientist swallows without examination; he maintains the critical judgment and the open mind.

To see a social problem clearly means also to get away from mere impressions. It is astonishing how many of our decisions are made upon mere chance impressions. Love at first sight is matched by condemning a criminal because of the "look out of his eyes." The man in the street gives a quarter to a beggar if he "likes his looks." The family that can assume an air of broken gentility scores high in favor at the charity office. The crook that looks like a gentleman may get off on probation. The devout and compliant convict used to hoodwink pardon and parole boards. There is in all this an element of beneficent charlatanry, charitable palmistry or phrenology. It is utterly unscientific, just as unscientific as the reason an Industrial Worker of the World gave me recently for his belief that unemployment is increasing. He insised that he knew it by personal experience and by the lengthened bread-lines in an eastern city. It is the same spirit that makes the optimistic poet sing of God in his heaven and well-being on earth when he feels well, or that drives the pessimist with bad digestion to call this the rottenest of all rotten worlds. The "general feel of things" is not a sound guide to either social theory or practice. I grant that it is difficult to get beneath mere impressions; it takes time and persistence. We did not need Goethe to tell us that doing is easy but thinking hard-that is, real thinking, thinking through a problem to some sound conclusion and not mere day dreaming. But such thinking is the price of scientific work which will do more good than harm.

The final question is how and where to get this scientific training. Science is both an attitude and a technique. The attitude, which I analyzed earlier, can be cultivated without teachers, books or colleges. The technique, particularly social technique, may be had from the literature of economics, political science and sociology in their applied aspects. You may go to college or to a school of philanthropy; you may imbibe methods from a trained social worker in your community. But remember that the technique of science is never fixed. Science always moves on. The charitable methods of twenty years ago may be utterly obsolete now. Our methods, even the most scientific, may be the laughing stock of our descendants in the twenty-first century. Social work may become a profession, if by that we mean that in addition to having an ideal of promoting social welfare, social workers become really qualified to do their work as no other profession can. It will become truly scientific only when every social worker sets as his ideal not drawing his meed of praise or money for turning off the day's work with as little friction as possible, but knowing the truth as it is and adding to the sum of truth for the creation of a world more worth living in and working for. To work for the truth that shall make you free-that is the scientific spirit.

# Where Time Is Money

# Some Recent Experience of Increased Product from Shortened Days

## By John A. Fitch

OF THE SURVEY STAFF

HE most important thing in the labor contract is the item concerning wages. It was shown in a recent article in the Survey that under the pressure of war prices there is a growing tendency to pay in accordance with the cost of living—a movement that is sure to mean greater comfort to the workers, not only during the war but after it. Scoon in importance, from the wage-earner's standpoint, but very near the top of the list nevertheless, is the question of hours. Here, too, the war has been influential in bringing about changes that will be of great and lasting benefit to labor.

The idea has widely prevailed for years that the tendency toward shorter hours of labor, and especially toward the eight-hour day, was constant and marked. Yet strange to say, the census figures have not justified such a belief. The 1910 census showed that in 1999 only about 8 per cent of the 6,600,000 wage-earners then engaged in manufacturing, worked forty-eight hours or less in a week. In the five-year period following, there was a slight improvement. In 1914 the number of wage-earners was over 7,000,000 and those who worked forty-eight hours or less in a week represented nearly 12 per cent of the total.

But a change came with the year 1914. Since then there has been a constant and rapid extension of the eight-hour day. Early in 1916 an attempt was made to measure its progress by checking up reports appearing in newspapers and elsewhere. After correspondence with many firms and trade unions, Ruth Pickering was able to estimate in the SURVEY for April 1, 1916, that in the previous ten months 100,000 men had achieved the eight-hour day in the United States. At the end of that year, Dorothy Kirchevy Brown brought the study down to date by using the same methods. Writing in the SURVEY of January 9, 1917, she expressed the belief, based on figures which she presented, that in the year 1916, 400,000 wasee-earners had secured the eight-hour.

Last fall a later and official statement appeared. In the Monthly Review of the United States Bureau of Labor Statistics for September, 1917, an estimate was made of the number of wage-earners securing the eight-hour day in 1915, 1916 and in the first six months of 1917. The information was taken from "leading trade union periodicals, labor papers, tradejournals, daily papers published in various parts of the country, annual and other reports issued by officers of labor organizations, and replies to inquiries made by the bureau." On the basis of the information thus secured, the bureau reported a total of 1,051,703 employes as having secured the eight-hour day during the time covered.

Included in this number were 400.000 railway employes, it seems doubful, however, whether these should be counted. There had been no investigation of railway practice. It was assumed, apparently, that the passage of the Adamson law gave the train crews an eight-hour day. This is not a safe assumption. But if the railroad men are left out there remains a total of 651,703—a greater number securing the eight-hour day in two and a half years than the total number in manufacturing industries who had it in 1909.

Undoubtedly this movement is due in large part to the scarcity of labor and the necessity of conciliating those workers who are available. Another consideration that must have had a great deal of weight, is the new knowledge that has been acquired since the outbreak of the war on the subject of faiture and its relation to output. Probably nothing that has ever been published has had a more profound influence in this respect than the reports of the British Committee on the Health of Munition Workers. That England, in order to achieve her maximum efficiency and be in a position to carry on a war with the utmost vigor, should actually curtail working hours and frown upon overtime and Sunday work, is a fact of far too great significance to go unheeded.

But there has been a considerable amount of experience in this country which also has had its influence. The great increase in production at the plant of the Ford Motor Company, after working hours had been reduced from nine to eight has been frequently pointed out. Other companies have been making experiments. The Cleveland Hardware Company, a concern employing several thousand men, had a regular working-day three years ago of nine hours. For years the company had experienced a busy season in the middle of the winter, during which it was customary to work one hour overtime. Three years ago when the time came for going on the ten-hour schedule, the management, which had been studying the matter, decided to run straight through the busy season on the old nine-hour schedule. Superintendents and foremen were horrified. They expressed the belief that the company would not be able to fill its orders. Nevertheless, the rule was adopted and overtime was abolished. At the end of the year when they checked up results, they found that it had been the year of largest production in the history of the company. The next year when the time for the busy season arrived, instead of trying to meet it with the regular working schedule, the management took an hour off, and the whole force went on the eight-hour day. Again, foremen and superintendents expressed their misgivings and again the workers produced more goods than ever before, exceeding their work of the previous year.

Last winter the Cleveland Hardware Company carried its experiment one step further. There is a large steam hammer in the plant, which proved inadequate for the handling of all the work to be done. It was decided to install another hammer of similar type. While it was being installed the work was piling up and the men proposed that they work in shifts of six hours each, instead of eight. Only two men are employed on the hammer, so it was not an extensive experiment. It is interesting to note, however, that after taking two hours more from their working day, each team of men working six hours so greatly increased their efficiency that they were able to turn out very nearly as great a product in six hours as they had formerly done in eight.

From the men's point of view, the experiment was not entirely satisfactory, for on a piece-work basis their earnings were not quite as great as before. After the new hammer was installed, they went back to the eight-hour schedule. The experiment did show, however, that at least in that kind of work the maximum of human efficiency is to be expected in a working day somewhere between six and eight hours in length.

A similar experience has been that of the Commonwealth Steel Company, in an industry where it had not been supposed that the eight-hour day would lead to an increased output.

At the Cloth Craft Shops of the Joseph and Feiss Company in Cleveland, the standard working day is eight hours, and the weekly hours up to January, 1917, were forty-four. At that time the management proposed to the employes that the shop shut down on Saturday altogether, and that the four hours formerly worked on Saturday be distributed through the other five days of the week. The idea was based on the known fact that the employes-or at any rate the girls, who are in the majority-frequently do housework in addition to their work in the factory and are, consequently, under an added physical strain. Some, even if they have no general housework to do, make their own clothes or do their own laundry work. It was believed under the circumstances that two full days of freedom from the factory would react favorably on individual efficiency in the shop.

The result has more than justified the expectation. It was not long before the workers were accomplishing as much in five days as they formerly did in five and one-half, and doing it within the eight-hour limit, too. Advantage can now be taken of the week-end as never before. Some of the employes go to the country on Friday night and return refreshed and invigorated late Sunday afternoon,

That the movement toward an eight-hour day, and generally toward shorter hours of labor, is gathering headway and will continue on purely economic grounds, is indicated not only by the trend in the past months but by other evidences at hand. There is no industry where long hours of labor have more persistently been maintained than in steel-making. Yet I was told by a steel manufacturer last summer that he is convinced of the effectiveness of the eight-hour day, and that the only reason why he does not now install it is that he does not know where he could get the extra men. He told me that as soon as the war is over and men are easier to get, he will put in three shifts of men throughout the plant in place of the twoshift system now prevailing.

It is altogether likely now that the understanding of the necessity and value of the eight-hour day has become so general. that the movement will go of its own weight. But there are certain forces that will accelerate its movement. The unions stand as a unit for the eight-hour day. They mean to have it by whatever route it may come. In the past, the unions have been opposed to legislation for the shorter work day. Samuel Gompers has strenuously opposed it. The eight hours must come by union activity-by collective bargaining, not by law. Three times has a convention of the American Federation of Labor voted down a resolution favoring legislation as a means of securing eight hours. The radicals and the westerners were for it, the conservatives and the easterners were against. But of late a change seems to have come about. Mr. Gompers worked hard for the passage of the Adamson law, to give the eight-hour day to the train crews. In neither of the last two conventions of the American Federation of Labor was the issue directly raised, but resolutions were adopted without debate that seemed to indicate a shifting from the traditional position

And now, within a month, the New York State Federation of Labor has adopted a resolution favoring legislation not only for an eight-hour day but for a Saturday half-holiday.

With this shifting of the point of view of the unions, the new attitude of the courts on this question becomes of greater importance. For a dozen years, after the adverse decision in the Lochner case involving a ten-hour law for bakers in New York, it had been assumed that a law fixing a limit on the hours of labor of grown men would be unconstitutional. Mississippi was the first to challenge the bugaboo. A ten-hour law was passed there a few years ago. It went to the Supreme Court of the state and the law was sustained in a decision which laid down the principle of the "inalienable right to rest," This was encouraging, but the question remained in doubt, nevertheless, until last year, when the Supreme Court of the United States in the case of Bunting vs. Oregon, definitely affirmed the right of a state to regulate hours of labor for men.

If the unions want to go ahead, then, and get eight-hour laws passed, they will not find the courts standing in the way, It is probable, though, that they will continue to make their gains, for the most part, through economic rather than legislative methods. But no matter which road they choose, the movement will be hastened by a constantly increasing weight of evidence of the wisdom of the eight-hour day. It is this weight of evidence which has not only enlisted on their side the greater part of the enlightened public, but is rapidly bringing into line the employers too.

# Salvation by Salvage

The Conservation of Waste Men and Waste Material in a House of Correction

By H. L. Baldensperger

Lait secretary national committee on prisons and prison lande; now captain in the quartemaster's beserve corps, con-

O set a thief to catch a thief was once considered shrewd economy. To set waste men at work upon waste material, converting it into wealth and making productive assets of themselves, has lately been demonstrated to be far better economy and at least as good penology. Superintendent John L. Whitman, of the Chicago House of Correction, has made this demonstration and is now conducting a plant for the conservation of wealth as well as for the conservation of men.

Throughout this country sheriffs and other local adminis-

trators are today holding valuable man-power dormant in the county jails. As a nation we are seriously handicapped by a shortage of labor, yet we punish ourselves by imprisoning our idlers and then insisting that they remain idle! Thousands of men in our jails and houses of corrections are doing nothing. In many places where they are set to work, their labor is not of a sort to contribute much to society. We have long known that idleness, which is mere training for further crime, is bad for the individual. Today it is much more than that-it is a check upon our national aims. Google Superintendent Whitman has found one way out. His demonstration, no longer an experiment, can easily be applied in other places. It has lessons not only for overcoming idleness, but for supplanting vicious methods of contract labor with other and more promising employment.

In 1914, most of the 2,000 prisoners in the Chicago House of Correction were employed under the private contract system. As usual, this was found to be of benefit chiefly to the contractor; the labor of the prisoner was substantially slave labor, his hours of toil were sold to the highest bidder and the contractor reaped the profit. In that year, a law abolished the contract system. Unfortunately, it put nothing in its place. Superintendent Whitman saw idleness, therefore, staring many of his prisoners in the face. A stone quarry, a brickyard and two laundries still furnished employment for some. The City Council appropriated \$10,000 to meet the emergency and with this Superintendent Whitman established a bakery, a sheet metal works, a printing office, a broom factory and other shops. Not all of these together, however, fully utilized the man-power of his jail or made the return of which he believed the institution capable.

Accordingly, Superintendent Whitman embarked upon a new enterprise. He went to the leads of the city police department, electrical department, fire department and others, and said: "I want you to sell to the House of Correction your waste material—fire engines, wagons, buggies, hose, harness, horses, electric lamps, portable engines, old iron, steel, brass, copper wire rope, waste paper, abandoned fixtures, worn out furniture, etc. I have no money and so I shall have to ask you to wait for your pay until the material can be sold, but I will undertake to give you at least as much as you now realize from the sale of this material."(\*)

This proposal was made in the fall of 1915. During the fourteen months ended December 31, 1916, the House of Correction collected from the city departments waste material that would have brought \$12,000 or \$13,000 if disposed of to the junk dealers of Chicago as it had been heretofore. After converting or improving the material, Superintendent Whitman sold it for \$138,000. This was the result achieved in fourteen months. The experiment was begun without money, tools or machinery of any kind. The city treasury got \$86,000, the labor of prisoners was credited with over \$11,000 and nearly \$41,000 was set aside for the benefit of needy families of the men in prison.

The methods of improving this waste material were ingenious in the extreme. After making his agreement with the city departments Superintendent Whitman bought automobile trucks to use in collecting the material and in bringing it to the House of Correction. A citizen chauffeur commanded each truck as guard, with a crew of prisoners. He and his prisoners would visit the police stations and fire houses and gather up all kinds of discarded matter. The driver would leave his prisoners to work by themselves while he carried a load of material to the prison, and upon his return would invariably find the prisoners working as he left them.

Arrangements were made with the Board of Education to renovate and repair school furniture and apparatus. The board had been maintaining a department of repairs which was expensive and not very efficient. Its committee on economy discovered large quantities of apparatus, school desks, teachers' desks, chairs and other school property that had been broken, nijured or defaced. They even found that the city was pay-

ing rent on rooms in which to store this discarded material. The value of the material ran into hundreds of thousands of dollars.

Experiment proved that the House of Correction could make large quantities of this material usable at a fraction of the cost entailed under the department of repairs. Arrangements were made whereby the Board of Education pays the House of Correction for the labor of the prisoners at the rate of 50 cents per day, also for the services of employes who take charge of the work, for the cost of materials used, and for the transportation of the material to and from the prison. Literally thousands of desks have been repaired, renovated, shellaced, varnished and made almost as good as new. Thousands of bow-backed chairs, broken or discarded, have been repaired, stained and varnished so as to make them better than they ever were. The chairs cost originally about 85 cents each. The cost to the city of renovating them was 13 cents each. There was also a large number of vises discarded by the manual training schools. These have been reconstructed. Library tables, dining tables, teachers' desks, office desks, armchairs, bookcases, instrument cases and many other articles have been rescued from oblivion to begin life anew.

The city owned a little stretch of railroad in an outlying section. There was an expensive derrick, a stretch of defunct railroad track, and some wooden tanks built out of cypress lumber and full of some kind of slops. A wrecker offered \$300 for the lot, Superintendent Whitman told the city comptroller that he could get more than that out of it. He set his men to work, chopped out the ice from the tanks, and scattered it over the adjacent land. He took down the tanks and hauled the lumber on his trucks to the House of Correction, together with the railroad iron and the ties. He took down the derrick and constructed a car from the defunct rolling stock on which it was loaded: and he made a contract with the street railroad company to haul it to the prison, some fifteen miles, in the small hours of the night. The cypress lumber proved to be of such excellent quality that part of it was sold for \$500. The balance of the material brought \$1,300 net, so the city realized \$1,800 instead of \$300.

Many articles, heretofore discarded, have a direct war value when saved. Platinum is one of these. From the thousands of electric lighting bulbs and globes from all parts of the city the short-term men at the prison carefully extracted and saved the tiny bits of platinum, so that in less than nine months over \$9,000 worth of this valuable product was sold. A high grade imbecile in the prison, who perhaps ought never to have been there, was charged with the special duty of preserving the tungsten in each globe. He thus made a return to the institution caula to the income on many Liberty bonds.

Waste paper which has been cast aside so heedlessly, is proving of inestimable value in war times. The heavier grades are remade into cartridge shells. A group of ten prisoners in the House of Correction have sorted and balled waste paper of the value of \$5,000 in one year. Rags, which have heretofore been mixed with garbage and destroyed at the reduction plant, are now saved, dried and baled. They are used in the manufacture of weatherproof paper, used to face the sides of the trenches.

This will give some idea of how the Chicago House of Correction is being conscripted for the national service; how the inmate is engaged in doing his bit as effectively as if he were enrolled in our forces overseas. President Wilson recently called upon America to "correct her unpardonable fault of wastefulness and extravagance." Will those in charge of monitorial and county institutions accept the teaching? Will we ourselves see that our administrators put the county jails on a war basis? 17 "were lies with us. See 1907 GOOGLE.

# LABOR POLITICS AND ARMY UNIFORMS

FOLLOWING the announcement trol of Labor Standards for Army Uniforms had been abolished, it became known that the work of the board is to be continued, under the direction of its former chairman, Louis E. Kirstein, of Boston. The board was created last August, after it had come to the attention of the War Department that certain firms to whom contracts for the manufacture of uniforms had been awarded were letting out a part of the work to be done amid unsanitary conditions and by child labor [see the SURVEY for Sept. 15, 1917, p. 519]. Mr. Kirstein, of William Filene's Sons Company, Boston, was chairman; Mrs. Florence Kelley, of the National Consumers' League, and Captain W. E. Kruesi, of the Quartermaster Corps.

The board was charged with the responsibility of fixing labor standards and of inspecting the shops of manufacturers seeking contracts to determine whether their conditions were satisfactory. Since October, 1917, there has been a standard form of contract, noninally required by the War Department, which binds the contractor to maintain at least a minimum standard of wages fixed by the board, and in all labor disputes to accept the board's decision as final.

Two things of great importance have been accomplished by the board. The manufacture of uniforms has been taken completely out of the tenements and restored to shops where sanitary standards can be enforced; and the fire hazard has been met by requiring employers to install modern fire-prevention appliances.

It was stated last week at the War Department that the work which required a board of three—the working out of a method and the determination of standards—has now been accompished, and the work that remains to be done is of an administrative character. For these reasons, it was stated, the board was abolished. Its powers revert to the quartermaster-general, who has designated Mr. Kirstein to exercise them. Mrs. Kelley will now be free to devote her full time to the Consumers' League. Captain Kruesi has been assigned to duty in Omaha.

From the beginning the work of the board was difficult, because of the existence of two rival unions in the men's clothing industry, the United Garment Workers, affiliated with the American Federation of Labor, and the Amalgamated Clothing Workers, a group which seceded a few years ago from the United Garment Workers, which it has now surpassed in membership. Whenever a contract was let to a firm employing members of one union the other was apt to charge discrimination. Since most of the larger firms making men's clothing employ members of the Amalgamated Clothing Workers, the greater number of protests have come from the members of the other union.

The conflict between these two unions has held the center of the stage at more than one convention of the American Federation of Labor, and the struggle between them seems to grow more acute with the passage of time. Secession is a deadly crime from the standpoint of the federation officials, and the fact that members of the Amalgamated Clothing Workers have been allowed to make army uniforms has been a very sore point with them, From Samuel Gompers down they have been keenly anxious for the abolition of the board that, as they believed, made this possible. It is stated, however, by the War Department officials, that no change in this respect is likely to occur.

#### THE PRESIDENT'S COMMIS-SION ON MOONEY

N a report on the Mooney case in San Francisco, issued last week, the President's Mediation Commission, composed of representatives of employers and employes, unanimously recommend that Tom Mooney be given a new trial. The hope is expressed that such action may be taken by the Supreme Court of California, before whom an appeal is now pending. In case it fails to take such action, the commission "respectfully recommends . . . that the President use his good offices to invoke action by the governor of California and the cooperation of its prosecuting officers to the end that a new trial may be had for Mooney whereby guilt or innocence may be put to the test of unquestionable jus-

The report states that the "most damaging testimony" against Mooney was that of Oxman, but subsequent events made Oxman unavailable as a witness. This has an important bearing on the case. "When Oxman was discredited the verdict against Mooney was discredited."

The report intimates that at least so far as form is concerned, the trials of Billings and Mooney were fairly conducted, and it states that "there is no question but that the jury acted in good faith upon the evidence as it was submitted." But because of subsequent developments, including the acquittals of Mrs. Mooney and Weinberg, "doubt is based upon the justice of the convictions," and altogether the situation "leaves the mind in the greatest uncertainty as to the complicity of the accused."

Four defendants have been tried. Two have been convicted and two acquitted. Yet the evidence submitted in the four trials was aimed at "the establishment of a single issue, their joint participation in the crime." In each case, taken by itself, the verdiet would seem to have been justified, but "the evidence of the four cases in their entirety must shake confidence in the justice of the convictions. This is due to the dubious character of the witnesses, the subsequent

revelations concerning them, and the conflict in the testimony of the same witnesses as the need for change in the testimony developed to fit new theories of the prosecution or new evidence by the defense.

"We find in the atmosphere surrounding the prosecution and trial of the case ground for disquietude. This feeling is reenforced by one factor of controlling importance. The most damaging testimony produced against Mooney came from a witness named Oxman. It was Oxman who testified with convincing detail to the presence of Mooney and Billings at a place and at a time where it was essential for them to have been if proof of their participation in the crime was to be established. After Mooney's conviction there came to light letters confessedly written by Oxman prior to his having been called to testify. The plain import of these letters is an attempt by Oxman to suborn perjury in corrobation of the vital testimony which he was to give and which in fact he did give against Mooney. It is true that Oxman was tried for attempted subornation of perjury and acquitted, but this is beside the present consideration. The fact is that he did write letters which tend completely to discredit any testimony he might give and no testimony from Oxman in the light of these letters would receive credence necessary to lead to conviction. In fact, after the exposure of Oxman, the district attorney did not call him, though available, as a witness in the trial of Mrs, Mooney, When Oxman was discredited the verdict against Mooney was discredited."

The findings of the President's commission in this case constitute a sharp challenge to the position taken a few weeks ago by Theodore Roosevelt in connection with the attempt to recall District Attorney Fickert, Colonel Roosevelt wrote to Fickert that the issue between him and his opponents was the issue between "patriotism and anarchy," and he assumed the guilt of the five defendants despite the fact that one of them. has not yet been tried and two have been acquitted. He intimated that those who believe in defending them are anarchists. Fickert was retained in office by a majority of 20,000 on the proposed recall. On the question of the protest against the convictions the report says:

"It is now well known that the attention to the situation in the East was first aroused through meetings of protest against the Mooney conviction in Russia. From Russia and the western states protest spread to the entire country until it has gathered momentum from many sources, sources whose opposition to violence is unquestioned, whose devotion to our cause in the war is unstinted. The liberal sentiment of Russia was aroused, the liberal sentiment of the United States was aroused, because the circumstances of Mooney's prosecution, in the light of his history, led to the belief that the terrible and sacred instrument of criminal justice was consciously or unconsciously made use of against labor by its enemies in an industrial conflict."

# INSURANCE FOR SOLDIERS EXPIRING

WHEN Mrs. Bettie Ingram, of Pratt City, Ala., received two checks from the United States government the other day, she probably did not know that this was the first payment to be made to the dependent of a man killed in action, under the military and naval insurance act approved October 16, last, Osmond Kelly Ingram, gunner's mate on the U. S. S. Cashin, was killed when a German submarine attacked his ship October 15: he was thus the first American sailor to die during an actual engagement in the present war. Mrs. Ingram, his mother, was a widow, dependent upon her son for support. One of the two checks sent her was for \$40. covering compensation for the two months up to December 15, the other for \$50, representing automatic insurance for the same two months.

Mrs. Ingram is entitled to \$20 compensation a month as long as the lives, unless she remarries. Although her son did not apply for government instrance, he died within the 120 days during which he was privileged to apply, and so she is entitled to automatic insurance at the rate of \$25 a month for 240 months. She will therefor receive a total of \$45 a month from the United States government.

The fact that the son did not apply for government insurance is part of a larger story. His right to apply would have expired February 12. Today a million men in the military service of the United States, whose right will similarly expire on that date, have not yet applied; if they fail to do so within the given time, their opportunity to become insured will be lost. The government is bending every effort to induce them to make application. It is raising the slogan, "One hundred per cent of America's fighting forces insured," and is urging camp commanders to press the advantages of insurance upon their men. It has no authority to compel a soldier or sailor to apply.

Up to January 29, applications for \$5.071.458.000 of insurance had been received. This represents over 603,976 soldiers and saltors insured against death and total disability. From 5,000 to 15,000 applications are received daily, and the average amount applied for is about \$8,400, the minimum permitted by the act being \$1,000 and the maximum \$10,000. These totals, great as they are, are regarded as only a be-

ginning; yet they have already made the government, almost overnight, the largest insurance company in the world.

Social workers, settlement workers, and all who come into contact with enlisted men or their families, are urged to press upon them the necessity of prompt application if insurance is to be secured. This application must be made within 120 days after enlistment except in the case of those who were in the service October 15; they must apply before February 12.

The automatic insurance provided by the government until that date affords only partial and limited protection. A person who has not applied before then and who is killed or totally disabled on February 13, or therafter, will not be protected by government insurance, nor will his dependents. Moreover, the automatic insurance represents only slightly more than \$4,000 and is payable only to a wife, child, or widowed mother, whereas the insurance that is bought can be as high as \$10,000, and is payable to a wife, husband, child, grandchild, parent, brother or sister. Relatives, it is pointed out, may wisely offer to help pay the premiums, since they may become the beneficiaries. The premiums may, if desired, be deducted from the man's pay, and the schedule of rates is such that the poorest paid man in the service, getting only \$30 a month, can secure the maximum amount, if he is under thirty years of age, for not more than \$6.50 a month. Answers to questions that are likely to be asked about this insurance are given in a namphlet. Uncle Sam's Insurance for Soldiers and Sailors, issued by the Treasury Depart-

Two units at Camp Jackson, S. C., are the latest additions to the honor roll of units in which every man has taken out the maximum insurance. One of these, with 115 men, has an insurance total of \$1,150,000 and another with fifty-two men has \$520,000. Camp Lewis, American Lake, Wash, is the first camp to report more than \$200,000.000 of insurance; there 22,058 policies have been applied for, with an average amount of \$92,67.

# NEW PRESSURE FOR WAR PROHIBITION

A T a meeting of the Auti-Saloon January 25, the executive officers decided to press at once for immediate prohibition of all alcoholic beverages as a war measure. It was pointed out that the President has been given discretionary powers to commandeer all the whise you on it stock and bond and to stop the manufacture of all beer and wine. Letters were, therefore, dispatched to every state superintendent of the league to set in motion a call from the dry con-

stituencies of the country asking the President to use the powers given to him.

Mark R. Shaw, of the Intercollegiate Prohibition Association, has declared that the census (vol. VIII, p. 373, for 1910) reveals the fact that the brewers use three and one-half times as much coal as the bakers, nearly six times as much as printers and publishers, nine times as much as manufacturers of boots and shoes, and twenty times as much as manufacturers of men's clothing; vet for want of coal all these are forced to stop the manufacture of necessities. The statement runs that in Massachusetts alone the brewers use over 90.000 tons of coal a year; besides this, many million bushels of grain are put into beer yearly. 160,000 freight cars are used for trans-portation, while 54,000 brewery workers (the bulk of them engineers, carpenters and other skilled men) and 100,000 bar-tenders are engaged in the

Congress and the states now face three prohibition campaigns—the amendment to the federal constitution, now on its way through the legislatures; the demand for war prohibition, to take immediate effect through action of President Wilson, or, failing that, through congressional action; and the demand that our growing army in France be made dry—denied not only distilled liquor, as it is now, but wine and ber as well, just as it is in this country.

## A PEASANT DEMOCRACY AND ITS FUTURE

THE Serbian mission to the United States has for its main purpose that of assuring the government and people of this country of the keen appreciation of the Serbian people for the new comradeship in arms of the two nations against the common foe of democracy. Why Serbia has a special right to consider herself a champion of democracy was explained to a representative of the Survey by Prof. Sima Losanitch, a member of the mission.

Ever since the overthrow of the Turkish domination, a hundred years ago, he said, the constitution, government and social institutions of the people have been among the most democratic in Europe. From 85 to 90 per cent of the people are peasants, and nearly all of them own the land they till. There has not been time for a disturbance of this happy condition either by an excessive concentration of wealth.

The king himself and many members of the government, though they are highly cultured men, have their origin in the peasant class, and farming interests have in the past controlled legislation. In such a homogeneous population, patriotism and social cohesion are

# LA JOURNÉE SERBE

FROM A FRENCH POSTER IN AID OF SERBIAN REFUGEES

naturally strong. Evidence of this is to be found in the close cooperative union of the farmers, embracing about onefifth of the whole population as active members.

Dr. Losanitch, it was subsequently learned, was for many years the head and inspiring leader of this cooperative movement. He had succeeded, before the outbreak of the war, in centering in one national agency in Belgrade all the buying and selling for the local associations, thus enabling them to buy at wholesale prices, especially implements and seeds, to build large granaries, and to conduct both interior and export sales from central warehouses on a large scale.

As in Denmark, Italy and Belgium, conomic cooperation has become the basis for a considerable educational movement. Not only facilities for instruction in dairy work, in viticulture and in other agricultural industries, were provided out of trading profits, but also

a library service, a temperance propaganda, the teaching of handicrafts and other efforts to aid general cultural advancement. These efforts have shown a remarkable influence on social ethics.

Of the economic values destroyed in the war, the human losses are the most appalling. Dr. Losanitch estimates that a quarter of the population has been killed. In 1912 the country had an army of 600,000; the present army is hardly 100,000, including the prisoners of war in Austria and Germany. During the three retreats from Serbia and the later retreat from Albania between 250,000 and 260,000 persons died.

Of 30,000 boys whom the Serbian government ordered to proceed in liftle groups to Albania and Montenegro, only 6,000 arrived. The reason for this order was that the boyhood of the nation had to be saved at all cost, since the enemy was credited with the fixed intention of exterminating the race altogether. But nature also was cruel and

denied food and warmth to the flower of the Serbian people. The majority of the boy survivors are now in France. where, together with the disabled soldiers, they are instructed in modern farming methods, in engineering, in building, in the planning of public works. They are preparing themselves

for the reconstruction of their country. Next in seriousness are the losses in live stock. So far as it is possible to estimate them, it appears that the enemy has carried away 75 per cent of the cattle and some 65 per cent of sheep and pigs. Moreover, Bulgaria and Austria between them have taken away about one-half of all the agricultural implements in the country. Some of these have simply been appropriated by individual soldiers, but the greater part has been officially requisitioned and either distributed among the farmers of neighboring provinces or sold for the benefit of the state treasury.

Though Serbia was not industrially fully developed, yet the utter loss and destruction of her textile and metal industries-the latter due to the country's wealth of copper, lead and other minerals-is a serious blow to her. machinery that could not be taken away is either used on the spot for the benefit of the enemy's armies, to be destroyed before the enemy will retreat, or has already been rendered into junk. Nearly all the rolling stock has been taken away; and, to judge from such experience as has been gained during the war. the enemy will not withdraw from the country until every bridge has been sprung,

The extent to which other properties have been destroyed is not yet known. In Belgrade, even before enemy occupation, about a thousand houses were demolished by shell-fire. In Shabatz only half the houses remain. Looting has been general and encouraged by the enemy governments.

The civil population of Serbia is now scattered practically over the whole of southern and western Europe, These refugees are distributed over Italy, France and Greece, Some are in Al-giers and Tunis, and 6,000 are in Corsica. There is hardly a family in the whole country that is not mourning its losses-but, says Dr. Losanitch, neither is there a family which is not determined to help in building up a better Serbia in the future.

While the task of reconstruction will be a stupendous one, it resolves itself into a number of distinct objects, all of which are attainable. As a whole, it is, of course, entirely outside the limits of organized private philanthropy, even if American generosity were to maintain after the war the record scale which it has attained.

The first need, of course, will be for such assistance as will enable the Serbian government to repatriate its people and to provide them with the immediate necessaries of life. Since neither food nor clothing of any description will be left in the country when the war comes to an end-flour in Belgrade now sells at \$1.40 per kilo-not to speak of drugs. practically everything will have to be imported, and a minimum of sanitary house accommodation will have to be provided prior to the return of the women, children, old people and disabled

The recommencement of agriculture with such aid as modern implements, machinery, vehicles and railroad equipment can give, will be the next step. In this connection Serbia is practically dependent on the good will of the allied governments, since only a large loanto be spent for the most part in the United States-can measure up to the need. Serbian agriculture has not, in the past, come up to modern efficiency standards, and Dr. Losanitch is convinced that with modern equipment and an energetic educational movement an amazing increase in productivity will take place.

As for industry, and more especially mining, not nearly so much capital is required on loan for a helpful beginning. In the past, private investment has not been attracted to Serbia because of the unsettled political condition of the country; all the world knew of the designs of Austria and Bulgaria upon the country's independence. With a guaranteed peace, the natural wealth of Serbia as well as the industry of her people will make such investment both safe and lucrative

There is in Serbia a real opportunity. says Dr. Losanitch, for a most fruitful cooperation of the American government, the American manufacturer and the American philanthropist in reconstructing a bulwark of democracy in the heart of the Balkans.

#### SAVING HEALTH AS WELL AS MONEY

RECENTLY published report of Surgeon-General Blue of the Public Health Service contains several striking instances of progress in disease control. One of these is in malarial demonstration work conducted through the southwest by the service alone or in cooperation with the International Health Board.

At eleven or more places the results in the prevention of malaria have been remarkably successful both from the physical and the economic angle. For instance, investigation in one group of plantations in Arkansas revealed an annual financial loss through cost of physician, service, drugs, loss of time through sickness and through the necessity of caring for the sick, of \$11.21 per family, In a group controlled by preventive measures, under the direction of the Public Health Service, the loss at the same time is twenty-five cents per family. A reprint of this report on malarial control is available in pamphlet form from the service.

Another experiment which recalls the heroic risks of yellow fever days [in the SURVEY for September 11, 1915] is that in which sixteen volunteers in the Public Health Service, including one woman, submitted to inoculation with blood and various discharges from cases of pellagra. Observation of these volunteers continued throughout the year. Not one developed the disease or any indication of it

#### RESULTS OF STATE AID TO PROBATION

QUESTION of vital interest to A QUESTION of vital interest to all concerned in making the courts more effective instruments of social betterment is, What should the state do to supervise, extend and im-prove probation work? The courts that handle child delinquency, non-support, drunkenness and the great mass of offenses are maintained locally. state government as yet concerns itself in no way with their administration in most states. Yet it is these courts that fill up state institutions and it is in them that the great opportunity is found to discover the causes of crime and to check it in its incipiency.

There is an awakened interest at present in several states in securing a state commission, department or bureau to supervise and develop probation, Following a description of the work of the New York State Probation Commission by its secretary, Charles L. Chute, before the State Association of Probation Officers and the State Conference of Charities and Correction of Illinois in the fall, a joint committee of the two conferences was appointed to urge the establishment of a bureau of probation in connection with the Illinois State Department of Public Welfare, In New Jersey, Pennsylvania, California and other states the subject is under discus-

The two states that have established independent state probation commissions. Massachusetts and New York, report remarkable development. This has occurred both in the extent and quality of probation work in all courts. New York, the first state to establish such a department, did so as the result of recommendations by a special legislative commission in 1905; the permanent probation commission was established in 1907. In its ten years of service the use of probation in the courts of the state has increased over 700 per cent, and the number of salaried probation officers has increased from 35 to 201. During the same period the population of all

## In The Nation's Service

America is sending its best men to fight for freedom, and in their honor the whole land is dotted with service flags carrying the stars of sacrifice.

It is a far cry from the crowded city streets above which floats our service flag to the telephone exchange hidden in the front-line trenches. But the actuating spirit of service here and abroad remains unchanged.

The Stars and Stripes is the

emblem which unites us in war for human liberty and national honor. The service flag is the emblem which unites us in mutual sympathy for the men who give themselves and for those who give their men.

These flags should inspire all citizens to greater endeavor and greater sacrifice. As one of the agencies of preparation and military support, the Bell System is honored by the opportunity to do its share.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY AND ASSOCIATED COMPANIES

One Policy

One System

Universal Service

correctional institutions in the state has steadily decreased as compared with the increase in general population. Especially during the past two years, although the number placed on probation has continued to increase, has the population of penal institutions gone down. The more extensive use of probation is cited by the commission as one of the leading causes for this decrease in commitments. In Massachusetts, probation is more extensively used than anywhere else.

More persons are now dealt with through the probation system annually

than are committed to all state correctional institutions, and there is a salaried probation officer in every court.

Probation commissions have endeavored also to set high standards. They have been largely educational and co-operative. They have published and distributed literature widely and conducted numerous conferences of probation officers and judges. They have also secured improved legislation and held themselves ready to meet attacks upon the system.

#### REAL ESTATE

FOR SALE or Rent at \$50 per month, a small house at 31 Morton St., Greenwich Village, 7 rooms, 2 bath rooms, 3 open fireplaces, hot air. Communicate with Miss B. Full.Exp. before 10 A.M. at Gregorian Hotel, 42 W. 35th St., phone Greeley 5530. a number of states have established supervision of probation officers through a state board of charities or similar body. This supervision is usually nominal consisting principally of a yearly statistical report on the use of probation in the state. For effective supervision it is regarded as essential by many who have studied the methods of the separate commissions that there be an independent organization, charged exclusively with this duty of supervision, employing a secretary and field agents to carry on investigations and development work throughout the state, and aiming to establish a state system of probation. At the last conference of the National Probation Association at Pittsburgh resolutions were adopted urging upon state governments the creation of probation commissions to extend and supervise probation, and pledging its support to the probation officers and other agencies for humane advance in their efforts to secure the establishment of such commissions.

In the development of efficient methods for dealing with the dependent and delinquent classes, not only state commissions, but a probation bureau in connection with one of the federal departments has been proposed. This, it is argued, could perform extremely valuable services in developing and coordinating the system throughout the nation.

#### HOW THE NEGRO IS FORGING AHEAD

ITTLE AFRICA," the Negro district of Harlem, New York city, is shortly to have a million-dollar recreation and social center for colored people. Thirteen lots have been purchased on a site adjoining the Young Women's Colored Christian Association, and a seven-story building containing gymnasium, swimming pool, auditorium, public and private diningrooms, concert room, employment agency, sleeping apartments, a banking office and other features has been The concert room will be planned. equipped with an organ at a cost of \$20,000. The property, when completed, will be taken over and operated by the Van-Astor Company, all of whose stockholders are Negroes,

At the same time, news comes from the National Association for the Advancement of Colored People that a great forward movement is planned and has, in part, been inaugurated for the year 1918. John R. Shillady, previous-ly director of outside activities during V. Everit Macy's superintendency of the poor of Westchester county, N. Y., is taking over the secretaryship of the organization, which so far has been without a paid general director of its activi-

(Continued from page 502)

the association in New York, Moorfield Storey, of Boston, the president, drew attention to the greatly increased economic importance of the Negro in the commonwealth, which is one of the main justifications for the organization's program: Physically Free from Peonage. Mentally Free from Ignorance, Politically Free from Disfranchisement, and Socially Free from Insult.

"Today Negroes own land," he said, "equal in area to New Hampshire, Vermont. Massachusetts and Rhode Island combined, some twenty million acres in all, They have other property worth not less than a billion of dollars. They have 400 newspapers and periodicals; they have banks, insurance companies, factories, stores. There is no business or profession in which they are not represented. They have colleges and schools of national reputation."

He held that the action taken by Secretary of War Baker in standing against segregation of the colored soldier, but organizing him in separate regiments, so that such honor as he may earn for himself may not be claimed for white comrades, was the wisest that could have been taken, and that it would be impossible in the future to continue depriving a whole race of the ballot when it had helped to make the world free for democracy by facing the bullet.

The association now has ninety-six branches and a membership of close on ten thousand. Crisis, its organ, has a net paid circulation of about 50,000. A "great spring drive" is being planned for a membership of 50,000.

#### TRAINING FOR SOCIAL WORK IN SPAIN

S OCIAL WORK is a prominent subject of instruction at the International Institute for Girls in Spain, whose beautiful buildings occupy the greater part of a block in the residential part of Madrid. "Thanks to such influences as the SURVEY," writes Susan D. Huntington, of Norwich, Conn., who for some years has been directing its fortunes, "we have included in the course some social work. Certain of our faculty are volunteering for regular classes at the Universidad Popular, a form of university extension, and for classes for illiterate workingmen, in giving Christmas parties for poor children and their mothers, visits to factories and tenement houses, and other activities. The object is to acquaint the students with conditions in their own country as well as to do some small work in alleviating distress and diminishing illiteracy. So far as I know, no other school in Spain has undertaken this sort of work."

This unique college, founded by Alice Gordon Gulick with the aim of offering

to Spanish girls the opportunities for higher education which American girls enjoy, was incorporated under the laws of the state of Massachusetts in 1892. Its graduates who have won their bachelor's degree from the Spanish government are numbered by scores, and a few are now pursuing graduate studies for the degree of doctor of philosophy. Its faculty is made up of American, Spanish and French teachers, Protestants, Roman Catholics and Free Thinkers. The students come from all parts of Spain, South America, France, England and the United States, the large majority always being Spanish girls.

Among the supporters of the institute are Sr. Posada, perhaps the most active man now in the famous Institute of Social Reform; José Castillejo, the educational reformer, who is improving these war years to invest available funds in far-reaching schemes to bring Spanish secondary schools and universities abreast of those in other countries, and lately appointed by King Alfonso to come to America to establish closer relations between our colleges and those of Spain, to visit our schools, to examine American methods of teaching, to put himself in touch with the leaders of thought here and to arrange for an interchange of students and professors between the two countries; the historian Altamira and the painter Sorolla. The daughters of many prominent men are among its students.

#### FRIENDLY VISITORS AMONG INDIAN FAMILIES

ITTLE public attention has been given to a human agency of the federal government which in recent years has attained considerable importance. The Indian appropriation act of last year contained an item of \$75,000, for additional field matrons. workers, according to the annual report of the Board of Indian Commissioners just published, provide a service of immeasurable value for the improvement of Indian home conditions; their service "has never been properly appreciated."

The formation of a separate "welfare section" in the Indian Office is advocated by the commissioners for the purpose of coordinating and rendering more independent two branches of its social service which at present are unduly restricted by the lack of full comprehension for their utility and opportunities on the part of many of the higher officials.

The field matrons are not given sufficient authority, and they are without transportation facilities such as would give the maximum scope to their work. They are in daily, intimate contact with Indian families, but their activity is not organized, say the commissioners, on the most effective lines. "If the field ma-(Continued to page 507)

SECOND EDITION—REVISED

## THE NORMAL LIFE

BY EDWARD T. DEVINE Adopted as a text-book in Red Cross and university classes and in schools for

training social workers. Price, \$1.25 By Meil, \$1.38 THE SURVEY

112 EAST 19 STREET

(Continued from page 505)

trons were provided with automobiles. not only the number of their daily visits would be largely increased, but they would be equipped to bring emergency cases to the agency hospital quickly and comfortably.

The other branch of social service which would become subject to such a new division would have to be created ab initio. A follow-up system of symnathetic care for the boys and girls returning from the Indian schools to their reservations is necessary to ensure that the effort and expenditure which goes into the operation of these institutions is not wasted. Too many returned students, we are told, fail to put into practice what they have learned.

"The government takes the young Indian from his reservation, places him in a school, feeds, clothes, amuses and edu-cates him; then sends him back to the reservation and, apparently, forgets him. The ex-student finds little or nothing at his home which measures up anywhere near the standard of living he had become accustomed to at the Indian school. Instead of encouragement he meets discouragement: instead of cooperation he meets antagonism."

This antagonism, in the opinion of the superintendents of reservations and of large non-reservation schools, is largely due to the prejudices and conservatism of the old and uneducated Indians who are extremely sensitive to ridicule and who, owing to the almost hallowed filial respect in which they are held, exert a determining influence over the conditions of life in the reservations. Almost nothing is being done to preserve among the young people those standards of industry and home life which the schools are at so much pains to impart.

#### ALL THE ELEMENTS FOR A MODEL TOWN

S OME day, perhaps, a German so-ciologist will bring out a work in five volumes on Racial Inheritance as Reflected in the Psychology of Domestic Economy. In the meantime, Udetta D. Brown, in a study of housing conditions in Amsterdam, N. Y., records curious national variations in the ideas of cleanliness.

"The Italian usually has bed and bedding immaculately clean, though she may sweep her dirt into the common hall or throw the garbage out of the window. The Syrian habit of sweeping the dirt under the oilcloth has been remarked by many." In Polish homes, "thrift is carried too far," and that means the occupancy of small, unfavorable rooms, sometimes in basements, cluttered, in one case, "not only with the family clothing and cooking utensils, but with a large cage of pigeons.

The Polish woman, Miss Brown believes, "must have a genius for minding her own business-it is a mystery how these families (often several sharing an apartment) live so closely without continually quarreling."

Though she makes the usual claims for the good effects of house-ownership on wage-earners without mentioning any of its drawbacks. Miss Brown admits that "there was little or no evidence of willful abuse of the dwellings by the tenants such as is sometimes found. . . In general one is impressed by the fact that both owner and tenant are more interested in the living conditions than is the city."

There are many other observations in this report on The Houses of Amsterdam (published by the Amsterdam Committee on Tuberculosis of the New York State Charities Aid Association) which show the importance of understanding the social and psychological, as well as the physical, aspects of bad housing before a satisfactory plan of reform measures can be worked out. Though Amsterdam, on the whole, seems to be no worse than other towns of the same size (population 31,000), it has some pretty black spots; and, as the investigator says, "a city is no cleaner than its dirtiest spot."

While many manufacturers yet live near their factories and thus the residential class division of the city is not so far advanced as elsewhere, the housing problems of Amsterdam are curiously similar to those of much larger cities. There are areas of congested buildings. and the worst factor in the existing housing situation is the dark room. usually created by obstructive buildings.

The close connection between tuberculosis and bad housing, though emphasized in the text, is not clearly proven by such figures as Miss Brown has been able to collect. It is true that 89 of 119 patients were found to occupy the same room with others and 88 even the same bed; but these are evidences of poverty rather than of defects in the dwellings which any housing code could

Houses built so closely that many of them depend for daylight on neighboring lots, streets built of a uniform width without regard to the traffic needs of different types of development-thus in the case of small dwellings unnecessarily increasing costs-many dead ends. lack of protection for residential areas against encroachment of industrial plants, absence of parks in spite of admirable natural opportunities-all these show that the adoption of a well-considered city plan is the most immediate need for improving present conditions and avoiding a further city growth on undesirable lines.

There is no need for congestion in a community of this kind, and Miss Brown urges a more adequate trolley service to facilitate the expansion of the

city, a planning of building areas "with minor residential streets on which lots of suitable frontage, thirty to fifty feet, would be laid out," and the creation of loan institutions which would favor the erection of small houses. Encouragement of gardening would give further impetus to such a development. To judge from her description of the streets. the soil should prove particularly suitable for a splendid growth of war gardens: "Surely, there never was worse mud than that of Amsterdam, it is black, it is oily, it sticks to the shoes and it is deep."

#### THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

#### KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corre-sponding officer, etc. [They are ar-ranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. (They are grouped under major subject clas-sifications, as "HEALTH," printed in capitals 1

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but of-fers an opportunity for you to share spiritedly and seriously in your com-munity or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall en-deavor to get your inquiry into the right hands.

#### WARTIME SERVICE

I TOW the Survey can serve"
I was the subject of an informal conference held early in April, in our library, to which we asked the executives of perhaps twently national social service organisations. The consocial service organizations. I ne con-ference was a unit in feeling that as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—hovo, when and where they can count locally-the SURVEY was at the threshold of an opportunity for service such as has seldom come to an educational enterprise.

The development of this directory is The development of this directory is one of several steps in carrying out this commission. The executives of these organizations will answer questions or offer consist to individuals and local organizations in adjusting their work to emergent wartime demands.

Listings \$3 a month for card of five lines (in-cluding one listing in SUBJECT INDEX by full aame and three by listials), fifty cents a month for each additional line. No contracts for less than three months. Additional charge of \$1 for each change of copy during three-month period.

FLÓRIDA, through her Board of State Institutions, recently leased 598 prisoners to private contractors for an average of \$360 per prisoner per annum. Bids of over \$400 were made, but Attorney-General Van C, Swearingen, who does not helieve that the first use of a convict is to be profitable to the state, declared that the prisoners were not worth more than \$300. All over that would be "blood money," he said. If the contractors had to pay more, the prisoners, who after all, he said, were "men, not cattle," might not be properly clothed and fed. The hoard re-recommended recently make a straington also work to discarded and that open houses, warded at night, he substituted. This has not yet been adopted.

GIRLS 'CLUB's in Bagland are federated in the National Organization of Girls' Clubs and, according to a letter received from the honorary secretary, keep in close touch with work among girls in this country. A lending library modeled upon the children's library of New York city, for instance, is now being tilturary modeled upon the children's library of New York city, for instance, is now being tilturary modeled upon the children's library of New York city, for instance, is now being tilturary models of the control of the country of New York city, in the sale seathlished a war loan plan of its own to which the members contribute in small sums. Guilds of health are smother distinctive mingling health instruction with advice on wholesome beauty culture, this department has been made very popular. Among the privileges enjoyed by the guild members are excursions and inexpensive supplies of "dressing cases." Industrial subjects and nent in the lecture courses during the war. The organization of purely recreational sacilities, of concerns, rambles, Shakespear societies, and the training of club workers have not, however, been neglected.

FRIENDS of working women are preparing their states against the Brown bill, once more introduced in the New York state legislature by Senator Brown. The hill would give the State Industrial Commission power during the war to suspend the propart. Last year the bill passed both house but was vetood by Governor Whitman, tollowing a hearing arranged by the New York City Consumer League. Some support of it came from those who were apprehensive every ounce of its manpower, as France has had to do. But the hill and the forces behind it were generally recognized as fathered hy those manufacturing increast, notably the canners whom Seator Brown has served by the canners whom Seator Brown has served child labor for long hours hefore war was even thought of

# Who Shall Grow Crops to Win the War and Feed a Hungry World?

## By Bruno Lasker

OF THE SURVEY STAFF

HE APPROACH of the planting season and a farmers' conference at the University of Illinois last week provided President Wilson with the occasion for a message to the farmers of the United States in which he brought out once more the country's reliance upon their part in winning the war. He recapitulated the issues of the conflict and pointed with justifiable pride to the admirable machinery for aiding the farmer which this country has in its Department of Agriculture. Then he went on to show that, making all allowance for their high productivity and in spite of last year's record in planting, acreage under wheat and crops obtained, the American farmers must make even greater sacrifices this year. This, he said, involves not only labor but "the painstaking application of every bit of scientific knowledge and every tested practice that is available."

On the immediate labor problem the President remarked: "The labor problem is one of great difficulty, and some of the best agencies of the nation are addressing themselves to the task of solving it, so far as it is possible to solve it. Farmers have not been exempted from the draft. I know that they would not wish to be. I take it for granted they would not wish to be put in a class by themselves in this respect. But the attention of the War Department has been very seriously centered upon the task of interfering with the labor of the farms as little as possible, and under the new draft regulations I believe that the farmers of the country will find that their supply of labor is very much less seriously drawn upon than it was under the first and initial draft, made before we had our present full experience in these perplexing matters."

The President is, of course, well aware that the difficulties of meeting the demand for farm labor will be even greater this year than they were last. It is true, the machinery for recruiting it has been insproved and the direct inroad of the draft upon it has been lessened; but there is a much stronger curtailment of potential sources of supply through the effect of the draft upon the country's manpower as a whole. The withdrawal of hundreds of thousands of men from their normal callings has increased wages everywhere and accentuated the growing disparity between the attractiveness of urban and rural labor conditions. The reviews of last year's labor shortage are too optimistic in that they take for their basis the normal labor needs of agriculture and not the needs of a greatly extended and intensified food production such as is required to win the war.

The new employment machinery of the Department of Labor is coming into the field too late to affect materially the planting prospects for this spring. The Department of Agriculture has set up an elaborate service for farm-help specialists who, in cooperation with the agencies of the federal Department of Labor, the state councils of defense, the state commissioners of agriculture and labor and other official state and local agencies, with county agents and with local stare-help committees, will be charged with meeting the labor needs in their specific localities. There will be thirty-eight of these specialists and four divisional supervisors to cover the whole country; but some of them have not yet been appointed. This service is for the purpose of coordinating efforts similar to those made last year which I shall further discuss below; it does not bring into the field any very promising new source of labor supply.

Hundreds of thousands of men and women this last fall were engaged and are still engaged in industries and services by no means essential to life or to the prosecution of war. The problem for state labor departments and federal agents is now, as it was then, how to divert labor from the less essential employments to that of food production.

Space does not permit to review here in detail the various efforts which were made last summer and fall to secure farm labor. In the aggregate, the local efforts having for their purpose the supply of farms with labor from nearby towns have resulted in a much greater transfer of labor than those territorially more extended. Of course, these local operations were largely part of the wider state and federal activity and should properly be credited to the respective departments. The new farm-help service of the Department of Agriculture again will first draw upon all local sources of labor and only

bring labor in from the outside when the fullest possible utilization of local labor proves inadequate. Interstate movement of help, the department announces, will be resorted to only as an exceptional last resource.

The value of the local recruitment must not, however, be exaggerated. A mes on the land for intry, he has in F., a season only. most instances left it for good reasons. Though he may return to it for a brief spell, whether on leave of absence given him for this purpose by his employer or unaided under the impulse of patriotism, he has no intention of permanently giving up his urban calling. Now, the labor need of agriculture is so pressing and, with the prospect of a continued world shortage of food, so likely to be lasting that progress on these makeshift lines, however well sustained, is bound to be insufficient. After all, 90 per cent of the country's farm operations take place on general farms which require qualified labor during the greater part of the year. Occasional help required for harvesting hay, grain and corn and for picking fruit, in spite of the prominence now given it in public discussion, is not the most important factor in the situation.

Many proposals have been made for increasing the standing army of food producers. The labor of prisoners and of various classes of handicapped persons, such as war cripples, the feebleminded, tuberculous patients, is to be made available. Boy labor obviously does not belong to this category, since it must always remain seasonal in character. There are also suggestions for the creation of what may be called the Stostituspeen of agriculture, an attacking army to be controlled from Washington and to be shifted from one part of the "front" to the other as the exigencies of food production demand. But in respect to them, also, the task considered is always that of filling the need for more harvest hands, not that of winning for agricultural work a large body of qualified persons seeking in it a vocation and livelihood.

Intimately associated with the farm-labor question is the involved problem of farm tenure and the size and value of farms. Obviously, prospects of advancing to a position of independence, of becoming a farm-owner or a tenant under conditions offering both a satisfactory income and security against want in old age are almost as important in the comparative attractiveness of farm employment as are the immediate terms of the labor contract. These conditions, if one may judge from the evidence of statistics, are deter

rather than improving as the years pass on. It is becoming more and more difficult for the man of small means to set himself up in the business of farming with any prospect of success.

The federal farm-loan act has not as yet been extended to provide the farmer with working capital, and no provision in that direction has been made in other ways. Interest rates at the present time almost drive the small man into bank-ruptcy and will become altogether prohibitive if the war continues for long. So far as transportation is concerned, the prospects are uncertain, even more so than normally, though priority at the moment is given to food shipments. Price regulation is not guaranteed for a long enough period to encourage long-term investments in improvement, reclamation or the introduction of better crops which can only be made if profits are assured for a period of years.

The promise of high prices in the near future is not mistaken for certainty; for, everyone acquainted with rural conditions knows that the interests lined up against the farmer have become more consolidated and more ruthless than they have ever been before. To draw attention to these facts at the present time, rather than draw pictures of long strings of automobiles owned by prosperous farmers at county fairs and of other outward evidences of happy country life, may be held by some an act of disservice to the national cause. But is it not, perhaps, just the suppression of the flagrant evils which beset the farming business and the lack of enlightened remedial effort which takes the gloss off patriotic appeals for agriculture as a vocation?

There is, however, one great potential supply of labor which need not for its application to food production wait upon a national policy to better the position and prospects of the rural worker generally. Women, yet barred from so many industrial openings for which they could and would qualify, are willing to enter a field which, in spite of its disadvantages and difficulties, has for them a number of peculiar attractions. The question is, how and to what extent can the work of women on the land at once be greatly increased?

Perhaps it may be necessary, at the outset, to answer the objection still widely prevalent that woman is physically incapable of the hard labor which general farm work and most of the specialized branches of food production entail. The obvious reply to this time-worn argument is, of course, that as a matter of fact in America and in every other country vast numbers of women are already engaged in such work and, to judge from such general information as to health and mortality as is available, engage in it without a strain prejudicial to their health or that of their offspring. As Havelock Ellis points out in one of his Essays in War Time: "When today we see women entering the most various avocations, that is not a dangerous innovation, but perhaps merely a return to ancient and natural conditions, . . . The modern industrial activities are dangerous, when they are dangerous, not because the work is too hard-for the work of primitive women is harder-but because it is an unnaturally and artificially dreary and monotonous work which stifles the mind. depresses the spirits, and injures the body, . . . It is the conditions of women's work which need changing in order that they may become, like those of primitive women, so various that they develop the mind and fortify the body."

This writer gives much evidence to show that even in primitive times women were less muscular than men. This did not, however, prevent them from inventing and developing the great majority of agricultural and domestic industries; it does not prevent them even today, and in the United States, from engaging in such strength-requiring occupations as stock-resing. Jumbering and wood-chooping.

Between 1900 and 1910 there was, according to the census, a marked increase in the number of women engaged in agricultural pursuits, 1,807,059 as compared with 977,336. It is suggested that this increase may in part be due to a difference in the instructions given to enumerators; but even allowing for this, there has been a steady increase with each census since 1880. Most remarkable has been that of women classed as "agricultural laborers," comprising five-sixths of the women employed in agriculture. Two-thirds of these are engaged in dairy work.

The war activities of women in Europe, which have brought so many surprises, have completed the proof, if proof were needed, that a great extension of women's work in agriculture is economically possible and profitable. We have it on the authority of A. D. Hall, secretary of the English Board of Agriculture, that the prejudice against the employment of women which had been shown in the earlier days of the war is passing away. Incidentally, he favors a greater subdivision of farm operations than is now customary; this would still further increase the advantage of employing women on the tasks for which they are most fitted, but which

normally are given to men because they are associated with other tasks requiring muscular exertion.

A number of competitive tests were recently held in Kent which proved women thoroughly competent in all the different operations, including tractor and horse plowing, tree planting, pruning, thatching, milking, and packing fruit. Girls with only three months' experience were able to drive with perfect ease tractors of a kind with which they were not previously familiar. Miss Talbot, who is in charge of the Women's Labor Department of the Board of Agriculture, is strongly of opinion that during the war women have proved themselves most efficient on the land and says that farmers are of the same opinion.

At the last census, in 1911, there were 120,000 women doing agricultural work in the United Kingdom, including those engaged for seasonal work only. Between April, 1914, and April, 1917, there was an increase of 44,500, only a small proportion of them women of the "educated class." An official of the department says: "Women have been found exceptionally useful by farmers in the feeding and management of stock. The rearing of young animals is more efficiently done by them than by men. The work involved requires the kind of attention which women are most able to give. In field work and management of teams of horses, those women of the educated classes who are accustomed to animals are specially useful. In dairying, and especially in cheese-making, women of all classes have been found to be efficient, and, given further training, there are great opportunities for women in all forms of dairy work."

Until 1917, the British government, like ours, had no special organization with regard to women's work on the land: only one woman inspector (the present head of the woman's labor department) was employed. The new department, created in January, 1917, has 60 organizing secretaries, one in each county, and sixteen traveling inspectors. No legal protection for women is necessary, but these government inspectors look specially into housing conditions. The chief difficulty in getting more women for agricultural work in England, as it threatens to be here, is one of wages.

It is practically impossible, writes my informant, for anyone without financial reserves to make a decent living as an employe, and the return for any woman who takes over a farm for herself is precarious and, at best, small. This is part of the general situation in English agriculture, but the situation is such that women cannot be attracted to the work. Low wages involve bad conditions of housing and food which cannot be accepted by women while superior alternatives are offered. The incentive of patriotism, he adds, and the attraction of the open air are not enough to counteract the discomforts and penury of the agricultural employe.

Nevertheless, the extension of women's employment in agriculture, both as wage-earner and as self-supporting farmer, is looked upon by the English Board of Agriculture as essential to the development of the country's home production of food after the war. The cooperation of the National Service Women's Land Army and of other voluntary bodies has been secured on the understanding that the recruiting of that "army" for the duration of the war and present provision for its training will be followed by "every effort," on the part of the government, "to enable the volunteer who can show a good record of work and who has been registered as having special aptitude, to settle on the land permanently either at home or in the oversea dominions."

In this country, the Advisory Council of the Woman's Land Army of America, created by a number of women's organizations at a conference held in December, is the body most directly interested in bringing about a great increase in the number of farm women. Encouraged by the success of last year's volunteering for agricultural work, limited though it was in numbers, this agency is now asking the cooperation of agricultural colleges and representative women's colleges throughout the country in the following program:

1. The organization for their localities of units ready to go into the field in the early spring and to be filled out during the summer by teachers and students taking their vacations and by women workers in seasonal trades:

2. Where such units cannot be formed, the registration of students who are willing to do farm work:

 The offer of special short agricultural courses;
 The arrangement of popular extension classes in neighboring towns and villages to teach the rudiments of farming and such seatons. sonal occupations as the sorting and packing of fruit:

5. The grant of academic credit to volunteers for the planting season and permission to substitute training in gardening for required gympasium work and outdoor sports;

6. Cooperation with the labor bureaus and other local agencies to set in motion machinery which will solve the problems of employment and housing in the way most suited to the conditions prevailing in their sections of the country.

7. Propaganda among women employed in seasonal trades and among women of leisure;
8. The distribution of posters and lantern lectures at farmers'

meetings; 9. The stimulation of other educational institutions in the state

to do similar work.

It cannot be held that this program is too ambitious or that, even if fully carried out, it diminishes the need for federal and state action on other lines. The demand for additional farm labor is too great to be met by the services of educated women and of women engaged in seasonal trades, however enthusiastically the colleges and women's societies may throw themselves into the labor of recruiting them. The main national effort must be directed along two coordinate lines,

In the first place, we need an authoritative national distribution of women workers to the localities where they are most needed and where, at the same time, conditions are most promising not only for their immediate comfort and satisfaction as regards labor conditions, but also for the permanent absorption of as large a proportion of them as possible in the farming population. This can only be achieved by a thoroughly organized and equipped farm labor division in the women's section of the federal Employment Service. Such a division, again, cannot expect to succeed in this larger opportunity if it limits its activity to "war work." The example of England, and such reports as we have from various parts of the United States, clearly show that the number of recruits to farm work is bound to remain small if that occupation is offered merely as a temporary opening in competition with the many alluring openings for women in industry. transportation and commercial employments. If, on the other hand, such a division as is here suggested cooperates with the States Relation Service of the Department of Agriculture and with the respective state departments in securing reliable information on profitable prospects of a permanent nature, if it takes advantage of the manifold federal and state facilities for equipping women for farm work, it will make a most important contribution towards the solution of the problem of rural manpower.

The second chief need of the situation is for a new emphasis on and perhaps to some extent re-direction of, the work of the women county agents appointed by the different states and in part supported from federal appropriations under the Smith-Lever act. In 1910, only four counties in two states had such officers. In 1915, there were 368 counties with women agents, and, according to the latest reports, there are now about 1,400.

These officers have organized hundreds of women's community clubs, tens of thousands of home improvement demonstrations in individual farm homes—mostly bearing upon labor saving—and supervised the work of thousands of girls', clubs for food production or conservation of one kind or another. They go from one place to another lecturing and instructing individual women on poultry raising, marketing of eggs, making of butter, keeping of milk, preparation and conservation of food, and other farm home activities performed by women. In some cases, a certain amount of specialization has already set in; and there are now county demonstrators in home economics and in dairy work. But, generally speaking, the problems confronting the woman county agent are, as one of them says, "as broad and as comprehensive as the family, the home and the community."

The phase, however, to which I wish to draw attention more particularly in the present connection is the woman county agent's work in developing the nascent economic resources of the community in which she works. "Her business," writes an enthusiast, "is to develop the earning resources of the women in the community and organize and apply to productive labor the energies of the women with whom she is working, and then to help them to apply this money increase to the improvement of their homes." Thus, the woman agent in Blackhawk county. Iowa, has made a notable success of the poultry industry. "From a haphazard side interest, literally thriving on the scraps and pickings of the farm, she has transformed it into an orderly, intelligent business." In Sullivan county, New Hampshire, and, since last fall, probably in many other localities, the women under the instruction of the woman agent have learned to can fruits and vegetables on a commercial scale and have thus added to their income while at the same time increasing the food supply of the nation.

There are no limits in sight to the usefulness of the woman county agent's activity if judiciously enlarged on the productive side. She can not only draw additional "manpower" from where it is most accessible, namely, from among the women already on the spot, but in doing so, by simultaneously instructing in modern methods of home-keeping, she can emancipate the farm woman from much needless drudgery. Serval volumes of illuminatine letters are on file in the Department of the production of the serval volumes of illuminatine letters are on file in the Department.

ment of Agriculture, from thousands of women in every part of the country, which illustrate the appalling conditions of home life for the mothers of the race. These conditions are, for the most part, due to tradition and ignorance. They are not dissimilar to those of the sweated home worker of our tenements trying to eke out by unceasing toil the insufficient earnings of her menfolk, engaging in socially wasteful effort and drudgery until, with better knowledge and organization, she becomes a self-supporting member of society, adding by her labor to the wealth of the nation and at the same time enancinating herself from the serfdom of her sex.

Not only is there a labor reserve in our farm homes which can be brought out by appropriate stimuli, but every improvement in the condition of the women already on the land will immersely increase the attraction of country life and agricultural employment for their sisters in the cities who judge their own prospects of success in farming by their example. More important, however, even than this influence on the movement "back to the land" is the effect which a more prosperous and satisfying life of the farm woman will produce upon the natural recruiting ground of the farm, the girl born and bred in the country. Taking a long view, every other effort to increase the supply of farm labor sinks into insignificance compared with the need to retain on the land by every possible means those who are already there.

The rural exodus, here as in all industrial countries, has assumed alarming proportions. Of course, it cannot be stemmed by educational means alone. It cannot be stated too emphatically that fundamental changes in labor conditions, in tenancy and in the economic factors which control the profitability of land cultivation are needed to make the business of agriculture so attractive that it can successfully compete for labor with other forms of enterprise. Patriotic eulogies of the man behind the plow are not enough. Nor can women be won for agriculture except on the true merits of the calling. In the meantime, while we are working for larger reforms, which will take time and daring, much can be accomplished towards the immediate goal by strengthening and enlarging such machinery as has already proved its worth.

# Rural Nursing Service under a County Board

By Harriet Fulmer, R. N.
SUPERVISOR OF THE RURAL NURSING SERVICE OF COOK COUNTY, ILLINOIS

N February 11, 1916, the following resolution was struction in hygiene to all

N February 11, 1916, the following resolution was operated to the County Board by Peter Reinberg, its president: "Resolved, That the places of employment, hereinafter named, be and the same are hereby created in a new department, to be known as the Bureau of Social Service, in the classified civil service of the county."

This bureau was established as a clearing-house for constructive social-service work, and Gertrude Howe Britton, formerly head of the Juvenile Protective League of Chicago, was placed in charge. Within the bureau have been created, as time went on, various divisions dealing with specific problems, and under one was incorporated that of public health. This division was established to render nursing care and instruction in hygiene to all cases of illness in that territory, in Cook county outside of the city of Chicago.

This section covers about 560 square miles, with a quarter of a million population. Excepting the four large towns, the population is scattered in small villages and in the strictly rural sections. In this environment, there is practically no organized social effort for relief, for constructive work or for public health and hygiene. With an appropriation for this, under the new bureau, four nurses were installed under civil service qualifications. (This division has since affiliated with the Red Cross Town and Nursing Service, bearing out the fact that governmental agencies may and can require a fixed, high standard for its employers.)

In order to operate intelligently, the outlying territory has

been divided into three sections according to the population and the remoteness of the territory to be covered. These districts are each in charge of a field nurse, and during the year ending December 1, 1917, 780 cases of tuberculosis and 400 of a miscellaneous nature have been cared for by this group. Histories and index files of each family are kept at the County Building in Chicago.

Today we are beginning to see light ahead regarding the tuberculosis situation in rural Cook county. The field nurses are bringing every week into the County Tuberculosis Sanatorium many cases who had not heard of this institution before, and many who thought it needed political pull to enter as a patient. It seems quite unbelievable that in the confines of Cook county there are still people who have never been to Chicago, that in the small villages are many cases of deficient and defective children who stand a much greater chance of becoming county charges than those in the city, because of the lack of machinery to brine about a reform in conditions.

In order to visualize to these communities the work of these nurses, in cooperation with the rural people, the medical profession, the county officials and the Chicago Tuberculosis Institute, dispensaries or health centers have been established in five sections of the county. We have called these centers "Cook county's second line of defense," for want of a better name. Through these centers during the year, 618 persons have passed, and each one of the homes of these people has been visited and instructions in hygiene and sanitation have been given. One hundred and fifteen physicians have written pledges of cooperation and health to this division. This alone bespeaks a hopeful sign. In the educational work, the fifteen farmers' institutes have been visited and health talks given. Ten town centers have held special public health exhibits in cooperation with the Chicago Tuberculosis Institute, which planned the programs and furnished splendid

Within the year, a medical inspection of several schools has been made by the nurses. In one school, in a town of

three hundred, a young girl was found in the last stages of tuberculosis. She had been accustomed to expectorating on the playground and wherever she happened to be, without any regard whatever for her associates. After much persuasion. the nurse was allowed to take the child to the County Tuberculosis Sanatorium, where she has since died. It was a pathetic story, a repetition of which is heard every hour by these rural nurses. If enlightenment of the community regarding tuberculosis has been going on in Chicago, its rays have not yet reached to the rural sections of the same county. Up in the town of S the splendid cooperation of the school trustees prevented an epidemic of scarlet fever, saw to it that the dentist inspected every mouth in the school and excluded two children with continuously high temperatures. These children both have since been diagnosed tubercular. The trustees have gone so far as to give the nurse who helped to bring this about all credit, and a passport to the village homes and the school whenever she wants to go. It has been a real piece of cooperation of physicians, dentists, trustees, teachers and nurses. This was in a small four-room school, in a conservative, old-fashioned farming territory,

We are going on slowly to establish such intelligent, intensive work in a dozen towns, about the same size, until finally every rural and village trustee in Cook county will be impelled to ask for these nurses' services, if for nothing else than to be in the fashion.

The defective young men from the rural sections turned down by the Examining Board have been one thing to open the eyes of the rural sections to the fact that hygiene and health for the child of the farmers are just as important as the hygiene and health of his cows and pigs, and the 'new day' in public health work in Cook county is starting out now to see that the children of the remote sections get a square deal and a fair share of the taxpayer's money to prevent in-efficient citizens of the future. The four field nurses are glad of the privilege of pioneering for Cook county in this constructive and much-needed niese of work.

# Annotated Bibliography of Consumers' Cooperation

#### By James Ford

CHARMAN OF THE COMMITTEE ON ECONOMIC COOPERATION OF THE NATIONAL COMMUNITY CENTER ASSOCIATION

NE of the products of war is the cooperative organization of consumers.
Throughout the country buying clubs,
canning clubs, community gardens and
kitchens are spontaneously being formed on
ground. The intentions of these groups are
essentially cooperative, their form and their
technique show a cooperative tendency. They
are, however, seriously handicapped by their
ignorance of the accumulated experience of
America in the past. If competently directed
this war-time movement may have permanent utility—may provide for the American
people as it has for those of Europe, low
prices, habits of thrift, and of altraism, busicapital which may protect democracy Irow
many forms of exploitation. To conserve
these values to the American public, the organizers, and, so far as possible, the members
of cooperative buying clubs, stores, or kitchence.

The purpose of the accompanying hibliography is to guide directors of community centers, labor unions, women's clubs and other agencies interested in the organization of consumers to the best of available litera-

# ture dealing with cooperative practice. Cooperation in the United States

In the United States the subject of industrial cooperation has received very inadequate treatment. Volume VI of the Johns Hopkins University Studies, Baltimore, 1883, constins five geographically supplementary studies of cooperation covering the whole of the United States. These reporting the whole of the United States. These reporting the bitation of the United States. These reporting the bitation of the United States and the United States. These reporting the bitation of the United States and the United States of the United States of America Cooperation in The New Encyclopedia of Social Scates of the United States for the years 1913, 1914, and 1916 have been published by James Ford in the United States for the years 1913, 1914, and

the American Yaar-Book for these years, and by Mrs. Cheves West Perky for 1917. John of State March 1918. John 1918. John State Board of Public Affairs. The U. S. Department of Agriculture, in Bulletin No. 394 of November 3, 1916, has printed A Survey of Typical Cooperative Stores in the United States, by J. A. Bevell, Hector Macpherson and W. H. Kerr. The most sympathetic recent study of cooperation West Perky and printed in pamphlet form in 1917 by the Cooperative League of American 20 Fifth Agreement of Mercin 1919 of American 20 Fifth Agreement States and Formal States 1919. The States of American 20 Fifth Agreement States and 1916 of American 20 Fifth Agreement States and 1919.

The list of recent intensive local studies of consumer's cooperation includes Cooperation in California, by Ira Cross, printed in the American Economic Review for September, 1911 (American Economic Association, Cambridge, Mass.), Cooperation in New York, 1913, The Cooperative Store in New York, 1913, The Cooperative Store in Capacity of the Cooperative Store in Cooperative Store in Capacity of the Cooperative Store in Capacity of the Cooperative Store in Cooperati

Ontario, January, 1916), and Cooperation in Minnesota, by L. D. II. Weld (International Review of Agricultural Economics, February and March, 1916, Rome, Italy).

References to older or less important contents of the season of the seas

#### Selected Bibliography of Consumers' Cooperation

The following is a list of the most accessible and most important recent books on consumer, cooperation that have appeared in the English language. These works will be found in the libraries of the large cities and the leafing colleges of each state. The and the leafing colleges of each state of the constant of the large cities and the leafing colleges of each state. The Acland and Jones and Catherine Webb are particularly recommended to persoan new to this subject. Cooperative organizers should read much more fully, beginning with the works of Holvaske, Sidney and Beatrice Webb, and Fay, but covering so far as possible continued to the constant of the continue and manuals as well as the books of this list.

An International Cooperative Bibliography was published in 1906 by the International Cooperative Alliance, 146 St. Stephen's House, Westminster, London, S. W. More recent titles are submitted monthly in the International Cooperative Bulletin, published International Cooperative Bulletin, published House, Dublish, Ireland, The latter ageory will send bibliographical references on any special cooperative problem to any inquier. The Cooperative League of America, 70 Fifth avenue, New York circ, is also prepared to give detailed information concernments.

# Seven Weeks in Italy

# The Response of the American Red Cross to the Emergency-II'

By Paul U. Kellogg

HERE has been one sweeping challenge for help in the Italian experience this fall which had no counterpart when France was invaded in 1914. The French retreat had no such wreckage of hospital equipment, for such equipment did not exist, nor was there a great hospital population of wounded men in the area swept over. The Italians had put their hospitals well up behind the line with no thought of a break. They managed to get out many patients-how many is not stated. Roads were so choked that ambulances, like other lighter vehicles, could not take advantage of their speed and get away. Stories are told of men with leg wounds who tramped 15 kilometers, of wounded men riding astride the retreating guns, of an orderly who got a typhoid patient out on his back and so on. But at this date a general idea of the supreme effort put forward by the Italian Sanita Militare and the Italian Red Cross, to care for the wounded back of the new front, and of the need for unstinted help from America, can be conveyed only by rough estimates of the losses in equipment. These are placed at not less than one hundred hospitals, and two of the principal magazines of hospital supplies. They lost all their first and second line base hospitals in the sector through which the retreat ran and about a quarter in the adjoining sector. Altogether they lost between a third and a half, nearer a half than a third, of their medical equipment in the army zone.

The tenseious Italian habit of holding things in reserve has been the subject of frequent comment in connection with volcano and earthquake disasters in the past. As a matter of whimsical interest, some of the goods sent by the American Red Cross at the time of the Messina carthquake, were distributed this last month to refugees in the neighborhood of Catania. This habit stood the nation in good stead in the present crisis, for its reserves in medical supplies have been sufficient to make the gaps. This, however, leaves them depleted, and to make good these reserves and build up new equipment was the immediate need.

Here it is in point to mention the excellent use the Italian Sanitary Service made in the emergency of the million lire left in its hands by the American Red Cross Commission which visited Italy in August. This sum, following the national bent, had been kept unspent. It was at once devoted to making good losses in important and costly medical installations.

And here should be mentioned the prompt help offered by the American Poets' Ambulance, which was organized in early September and which had orders placed in Italy in the early fall enabling it to put five barrack hospitals and thirty tent hospitals in the hands of the Intendenza for immediate service when the Italian line fell back to the Piave. It thus got American help through in the earliest crucial days, and as we shall see, thereafter enabled the Red Cross to carry out a demonstration in the field of ambulance service on a scale and with a speed which would have been otherwise impossible. Each nation at war has had a distinctive development of its army medical system, and the Italians, who have had to carry wounded by aerial railways and mule back in their mountain fighting, and who have hewn dressing stations out of solid rock on the high peaks, have shown originality in the development of their medical service throughout.

To work helpfully as well as promptly, the director of military affairs of the American Red Cross, as soon as he reached Italy, set out to learn the general characteristics of the Italian hospital units and to concentrate on them, to find the particular needs created by the crisis and to make immediate purchase of instruments and supplies which he knew from experience in France would be called for. The Clearing House had practically empired its medical stores. Swift purchases were made by the Red Cross of bedding for 3,000 beds—mattresses, aheets, pillows, blankets—and such smaller instruments and rubber goods as could be picked up in Rome, in view of the heavy purchases by the army and the Italian Red Cross.

The urgency of the need was illustrated in a third line base hospital visited in mid-November. This was of 800 beds and housed in a chateau. Normally it had been handling a flow of twenty-five to forty incoming patients a day and caring for them from a week to four or five months. This had been transformed in the emergency into what the French call an evacuation hospital, and big trucks were coming in, with twelve to sixteeen wounded in each, at an interval of three minutes and a half. They were handling a current of 600 patients a day, and of course the equipment was tragically inadequate. Eight days later, complete new equipment for half their beds and such surgical instruments as could be had left the Red Cross headquarters in Rome for this hospital.

But, in general, the hospitals back of the new front, in order to salvage any possible further losses, were being stripped of beds and blankets, and the patients were lying on mattresses. Obviously, in such a situation, the part of the Red Cross was not to attempt to replace things for the moment in individual hospitals, but to give to the central authorities who could place supplies where they could use them best.

A lump gift of 175,000 lire worth of supplies was ordered for the Sanita Militare,—disinfecting wagons, autoclaves for sterilizing dressings, surgical sets, 500 comulete beds, quantities of gauze, cotton, drugs, iodine, anaesthetics, etc.

Plans thereafter rapidly took shape for a very considerable gift of ten complete field hospitals—one direct to the Sanita Militare and nine through the Italian Red Cross, the first to be delivered by mid-January. Each will consist of 50 beds, with an overload capacity of 150, or even of 350. They will fly the American Red Cross and the Italian flags. Some will be tent hospitals, others with tents merely for the special uses, the wards being farm buildings or other shelters requisitioned for the purpose as is the Italian custom.

The distinctive feature of the Hospital Supply Service in France, as it was developed in the early years of the war by the American Distributing Service, and as it has been expanded under the American Red Cross in the last six months.

This is the second of three articles, the first of which was published in the Suxuxy for Pebruary 2. For the corresponding series, Four Months in France, see the Suxuxy for November 24, December 8, and December 15, 1917.

has been a corps of voluntary inspectors operating in conjunction with an independent stores center. From this, informally and directly the surgeons in charge could receive prompt consignment of supplementary supplies which, because of routine delays in government material, were slow in reaching them, needed equipment, drugs outside the army lists, or executional instruments.

#### Direct Relations with the Wounded

THERE has been no corresponding society in Italy for distributing hospiral supplies. A semi-military bureau, under the Quartermaster's Department, known as the Ufficio Doni, harmy. The American Red Cross has established relations with the supreme command which permit of developing a group of volunteer inspectors and a shipping system along the lines of the service in France, bringing the Red Cross into direct contact with the hospitals and the patients in them so as to make the help from America self-revealing and thus bring out the moral and sentimental values inherent in it.

On November 30, the hospital supply warehouse had been open three weeks, and even without its permanent organization the showing of deliveries to individual hospitals had been striking. No less than 19,000 articles had gone out. These went to hospitals all over the country through which the service got in touch through the reports of the Red Cross mission of last summer, through the Clearing House, through the visits of members of the staff of the Military Affairs Department, and as result of inspections made by the head of the Medical and Surgical Division of the Military Affairs Department of the Red Cross in France, who in early November made a tour covering many points in northern Italy, reporting to the commissioner for Europe.

Hospital supplies shipped from Red Cross stores in France, no less than purchases in Italy, made this emergent work possible, and for the winter's needs 750 tons of hospital supplies have been ordered in America for immediate delivery. These include anæsthetics (some Italian hospitals have been performing minor operations without them), surgical instruments, rubber goods, enamel ware, gauze, absorbent cotton and drugs. Just what such a shipment means it is difficult for a layman to grasp. The quantities involved would leave a corner druggist gasping. For example, the order includes 250 pounds of quinine. Since the war quinine has been difficult to get at any price, and the price has jumped in France from 12 to 16 francs a pound to 400 francs. Quinine is badly needed in Italy, and such a Red Cross consignment will be nothing short of a boon. Other items which give a better idea in terms of the things which mean most to the wounded are 15 tons of chloroform and 25 tons of ether. These again are beyond the layman to visualize. He can come nearer to picturing 2,000 bales of absorbent cotton, the item asked for,

Back of this service, and supplying it with hospital appared, will be a system of workrooms in Rome, the organization of which has already gone forward. In the early days of the war numerous œuvres of this sort were started in Rome, four of them in the hands of American women married to Italians. Moreover, the residence of the American ambassador in the Palazzo Drago has been a redoubtable center of activity under Mrs. Page, with its guestroom stacked high with bolts of cleth and finished garments. These five eueves have all been enlisted in a common enterprise, in which the naterials and wages for the soldiers' wives and refugee women employed, the Red Cross wilm gover and distributing the out-

put,-hospital supplies and undergarments for its medical and relief bureaus.

Paralleling the distribution service for hospital supplies in France has been that for surgical dressings, as developed by the Surgical Dressings Committee of America. Here a beginning was already under way, for the American social worker who founded the French work had, in September, started similar workrooms in Rome, which by November were turning out 30,000 dressings a week. The Red Cross forthwith agreed to back them up to put out a million dressings by January 1, and a second million by January 15, and with workrooms already employing 200 women, volunteers and paid, the dressings will be ready for delivery through the hospitals supply service of the Red Cross. Not only will these dressings help to fill the gap due to lost supplies, but they will open up a new standard of practice in Italian hospitals, which have been in the habit of receiving gauze, linen, etc., and making up dressings in the hospitals, with the result that nurses at work in the wards all day may spend half the night rolling bandages. On the other hand, the American innovators have found another practice in vogue in the Italian hospitals which they feel might well be copied on other fronts. This is to wash dressings and to use them over again-a practice already used in the American Ambulance Hospital at Neuilly [Red Cross]. One hospital in Rome even washes and sterilizes its raw cotton in this way, with economy and good results.

In conjunction with these activities, engaging the time and energies of women of all social groups, another development should be set down—the organization of an informal auxiliary committee of Italian women, by two leaders in the development of the Women's War Relief Corps of the American Red Cross in Paris, who came on to Rome for this mission. The members of the Rome group in turn undertook to enlist two fellow-countrywomen in each of the Italian cities, as a nucleus to build on in the development of any phases of Red Cross work in which such Italian allies would be of help.

The outstanding event on the military medical side of the Red Cross work in Italy has yet to be set down—the turning over to the Italian Medical Service of the Third Army, five weeks after the Red Cross reached Rome and less than five days after the United States declared war against Austria, of three complete ambulance sections. Each section is made up of 20 ambulances, a staff car, a kitchen trailer, a motorcycle, and two camions. Each section comprises 33 men, veterans of the Norton-Harjes and American Field Service in France, who come in as volunteers with the rank of commissioned officers.

#### Veteran Ambulances from France

The nucleus of this service was a fleet of somethiag over twenty cars, which left Paris on November 18 and did not reach Milan until December 8. They came by a long route through Marseilles and Ventimiglia. Some day, in lighter times, the full epic of their transit will be written. They were the recipients of demonstrations in Marseilles, in Cannes, in other French and Italian cities. But ambulances are scarce in France, these were veterans no less than their drivers and had pounded over shell-torn roads all the way from the British sectors to Verdun. Cars chose the south of France to go on xepos or permanent sick leave and only twelve came through to Milan in shape to be of use. But here they were met by new recruits, fifty Fords, the gift to the Red Cross of the American Poets' Ambulance, which, with active members both in Italy and the United States, had made a still

earlier gift of another fifty ambulances direct to the Italian army. These had gone into first-line service between November 1 and 20.

The presentation of the combined Poets'-Red Cross sections took place on December 13, in the yard of an old Milan palace used by the military as a garage. Crossed Italian and American flags decked the walls of the ancient quadrangle. The cars of the first two sections, forty of them, were arranged in a horseshoe, with the camions in the middle, before a raised platform at one end. Here were the prefects of the province and the sindaco of Milan, the colonel of the Sanita Militare and the representative of the French Mission: the commander of the British Flying Corps, the president of the local Italian Red Cross and the American consul, chairman of the American Red Cross Committee of Milan. More important, here were the one hundred members of the American Red Cross Ambulance Corps for Italy, in khaki, six of them wearing Croix de Guerre, standing at salute as a bugle sounded, and the general sent to receive them in the name of the Third Army swung into the yard with a bodyguard of plumed Bersaglieri. The presentation was made by the acting director general of the Red Cross in Italy, who pointed out that they were the first American units to reach the Italian front, that they had volunteered for the service in Italy, and that it was a service in a war against a common enemy. The general responded in kind, and the French commander introduced him to the ambulance men who had won the war-cross for acts of bravery in caring for the wounded in France. An hour later the first section rolled out of the vard with American flags flying. They drew up in the Piazza del Duomo, where the mayor of Milan bid them farewell. It was a gala day in the city. Square and streets were thronged with crowds that did not stop to ask by what magic carpet the "Americani" had been whisked in four days' time to the doors of the old Gothic cathedral, but accepted them for a fact bound up in our declaration of war and cheered them unremittingly until they had streamed through the city gate that led off to the old battleground of Solferino on the way to the Piave front. The second and third sections followed during the succeeding fortnight, and the Red Cross is under commitment to bring the corps to a total of two hundred cars.

#### Carroll of Carollton at the Front

IN THE face of the staggering need for hospital supplies and equipment, those things were the first concern of the Red Cross men in Italy charged with laying the groundwork for a Military Affairs Department: but a beginning had been made in two other directions following precedents established in France, in gift and canteen work for the men in the field and en route to and from their homes. Here it may be permitted for a second time to depart from the rule of this writing and mention by name. Recall if you will the bold signatures that, in the school histories, stand below the Declaration of Independence, and among them, so that there might be no mistaking who was putting his head in the halter. Charles Carroll of Carrollton. That same name, so signed, is the one appended to Red Cross field reports from the Piave front in mid-November. No lean, cantankerous rebel is its present-day bearer, but a well-known member of the American colony in Paris, no longer young, the owner of a stud farm. None of the three figures in the familiar picture of the Spirit of Seventy-six suggests him, but their spirit is his, and at Montello, Nervesa and San Dona di Piave, through mud and under shell-fire, he skirted the trenches and the parapet river bank. He accompanied the head of the Opera Federale d'Assistenza e Propagande Nazionala, who spoke with every man they passed and addressed knots of them. If two tons of chocolate and a scattered fire of cigarettes and mufflers could have routed the enemy army it would have long since been back at the Isonzo; but these things at least put in a war-time vernacular, understandable across barriers of Janguage and distance, the fact that Americans were come to Italy to helo.

#### Italy's Great Winter Need-Wool

THOSE physical needs of the Italian troops, which mean the difference between sickness and health, reach, of course, much deeper. When the line was solid, the soldiers had built winter quarrens and had gathered wood to heat them. Now they have lost these shelters and have little wood to warm their improvised dugouts. It is estimated that three times as many blankets will be needed to prevent suffering this winter; blankets are all but unpurchasable in Italy, and the Italian Red Cross has started a house-to-house collection throughout all Italy to get together a million blankets. Back in August an investigator of the American Relief Clearing House, who made a tour of inspection in advance of the coming of the first Red Cross commission, wrote as follows:

"The material aid which we might render to the Italian soldiers at the front is covered pretty fully in the word 'wool.' The Italian government does not provide the greater part of the woolen garments which are needed on all the fronts during the winter and on the high mountain positions the year around. It provides woolen undershirts but has ceased to provide underwear, and it provides woolen socks, but not in numbers adequate to the need, seeing that they are so soon worn out. To the bounty of the civil population is left the provision of supplementary socks and all of the footless long stockings, mittens, neck-scarfs, helmets and sweaters have never been adequately supplied."

There is a dearth of wool in Italy, and this condition has been accentuated by the events of the past three months, as evidenced by the condition in some of the hospitals come to the knowledge of the Red Cross, where wounded soldiers and convalescents have been quite without woolen underwear. If wool can be brought from America, yarn and cloth, and made up in work-rooms giving employment to soldiers' wives and refugees, it will prevent a repetition along the Piave of experiences bordering on those at Valley Forge, and at the same time give occupation and earnings to thousands of needs' families.

Equally real was the need pointed out in the report referred to for the development of recreation and refreshment activities, both at the front and along the lines of communication. Several commanders were quoted as regretting that: "the soldiers are given only fifteen days' leave in the course of the year, which is made almost abhorrent to them by the long rides in the cattle cars of a convoyed train, which may take them as many as four days to bring them from the front to Rome, and that little rest and almost no recreation is given them when they return after a month of duty in the front-line rositions."

Several commanders had built Case del soldato (recreation barracks), but, even before the retreat, these were inadequate in numbers, in equipment and supervision; and the suggestion was made that the American Knights of Columbus might be enlisted to develop a work similar to that of the American Y. M. C. A., in the French army. Poste di comporto have maintained by the Italian Red Cross and by individual organizations at railroad stations, but here again the provision is inadequate, and there is opportunity for the Red Cross

to inaugurate a large work. Its Genoa committee has turned its chalet into a canteen for British, French and Italian soldiers; and the Milan committee has undertaken to equip and maintain a rest-room, canteen and reading-room in barracks erected in the station yard by the municipality for service of allied troops passing through the city. The Milary Affairs Department of the Red Cross has gone into the work which the Italian Red Cross is doing in canteens as well as their systematic provision of first-aid rooms at the railroad stations, studied the troop movement in Italy, and outlined for the consideration of the permanent commission a project for installing canteens and rest-rooms at eight important junctions along the railroad lines running up both coasts from Regroi and Messing to the front

#### Supplies and Food Double Quick

ALL THESE activities fall back on the supply service, serving both civil and military departments, and here again the story of November is one of rapid engineering in the face of almost impossible obstacles of distance, rail congestion and depleted markets. Within thirty-six hours from the time word came from the Red Cross-Clearing House conference at the embassy in Rome on November 5, twenty-four cars had been loaded at the Red Cross stores center in Paris. The old cab stables on the Chemin Vert had never known such activity. and 20,000 blankets, 10,000 mattresses, pillows and clothing made up the consignment. The main lines of rail into Italy were engrossed with a freightage of troops and army paraphernalia, and the train was held up for an entire week. The superintendent of the warehouse was detailed to accompany it, slept on the cars and brought his train into Rome five days later-remarkable time under the circumstances. It was plastered with Red Cross labels, and decked with American and Italian flags which were stripped by souvenir-hunters en route. Once in Rome, the cars were transshipped without being unloaded to points designated by the civil and military affairs departments-Bologna, Florence, Palermo, Naples, Rimini, Catania. In cases where a car-load lot did not fit the needs, one car was run alongside another in the yard, half the goods were removed, the empty half filled from the next car or from stores gotten together in Rome, and off it would go. A second shipment of ten cars of food, and a third of sixteen of food and blankets, which reached Rome in early December, were handled in like manner.

Meanwhile, purchasing was going forward in Rome, Mi lan, Genoa and other points—condensed milk in thousands of cases, hundreds of thousands of lires worth of women's and children's underwear (much of which did not come to the warehouses at all or was rammed into new gunny sacks and shipped post haste from the warehouse floor), 25,000 shirts, 13,000 blankes, 50,000 woolen drawers, 60,000 jerseys, 150,-000 drawers and vests, socks, thermometers, medical supplies of all sorts.

In Rome, the Red Cross secured through the Italian government two of the top floors of the Magazzini Generali, served by direct rail and water, with electric cranes and carriers. Agents were despatched to arrange for storage at ports of entry, and the two top floors of the Magazzini Generali at Naples were secured, with direct rail and water connections, electric hoists from boats into the warehouse or into cars. Similar facilities have been secured in Genoa, and planned in Palermo. At the same time storage space was taken over at centers of need—in Florence a building given by the Custom House; in Bologna the basement of a large Palazzo; in Milan, a warehouse lent by an American firm:

and lesser provisions elsewhere. Within one month from the beginning of operations the Red Cross had 50,000 tons of warchouse space in Italy and had it practically empty, so rapid had been the movement of shipments and purchases, but ready for the large invoices under order by its purchasing department, for further and larger shipments en route from its stores center in France, and for 1,500 tons of shipping space, sailing from America prior to January 1, arranged by its Washington headquarters, and to be filled in line with cabled instructions sent late in November from Rome, giving the approximate nature of the articles desired, and the kinds and quantities needed most.

But while this Red Cross adventuring was going forward with the zest which comes of accomplishing things in the face of difficulties, weeks compacted of a very different substance of experience were the portion of the homeless and shattered families, filtering singly or in masses from the war-wrecked north to their abiding-places throughout Italy. And it remains to cast the relation of the Red Cross work to the great body of effort that reached out to succor them and to what lies in the months ahead.

Of the stuff of which that experience was compounded, the Red Cross workers north and south had no lack of evidence. A young Italian officer came to the office in Bologna, shared by the Clearing House with the Red Cross. He had himself been a volunteer worker at the station when the crush came through. The story was told of a baby born at night on one of the trains. The mother had no clothes for it, and this voung Italian had taken off his shirt to wrap it in. He now brought with him to the office a young woman and a boy of ten. The former was of about the build and appearance of Maud Adams, the actress, and both were nicely dressed. They were of noble family, from Udine, and with their father of 70, their mother, some years younger, and a nurse, were stranded in Bologna. They left Udine about two o'clock in the morning in the midst of disorder. They had to walk and were drenched with rain. They were in the great ruck of soldiers, contadini, mules, camions, ambulances, all the dishevel of an army and a province in mad retreat. They made twenty kilometres or more by the afternoon of that day. Here they had been taken aboard a train, but this was wrecked by a bomb which hit one of the cars and killed the refugees within. Then this family were able to get a camion and reach Spilimbergo, on the western bank of the Tagliamento, where an officer looked after them and gave them a place to sleep. They had been resting for two hours when the town was shelled by the advancing Austrians. They got up and again found places in camions. Later they obtained a wagon and continued their journey, sometimes going for two days without being able to get food. It took them seven days to reach Bologna. and they were able to bring nothing with them but the clothing on their backs.

#### When the Order Came to Run

A RELIEF worker at Naples tells of a woman who was standing at her farmyard door when the order came to run. They had their household goods in a wagon to which they had hitched their horse and an ox, sturdy animals but slow. Her husband told her to take the children and run and he would come on. In the crush she had become separated from the children, and here she was in Naples, with no knowledge of the whereabouts of husband or children. Another woman arrived with three children; the fourth baby had been drowned. The bridge on the Tagliamento they had thought to cross was down, and, as the mother tried to get the other

children over, the baby was swept from the basket in which she had carried it on her back.

When the American, later a Red Cross worker, took charge of the clothing distribution for the Italian Red Cross at the chief asile in Florence, the church and cloisters of Santa Maria Novella, there were 9,000 people lodged there, all but perhaps 50 of them women and children, for these families of northern peasantry are rich in children. One woman of 28 brought nine, and apparently an annual haby from nineteen would seem to be the general rule. The people were without clothing other than those they wore, and almost none of them had a complete outfit. Inside of two days the American colony had raised 6,000 lire for purchase and collected 10,000 used garments. Before coming in the line the families were first interviewed by volunteers, the orders turned in and the mothers given duplicate slips of paper with their needs indicated. Here a woman would come with five or six children, among them only one pair of shoes, with perhaps no child with a complete set of underclothes, and the mother herself still wet from the rain from the waist down. Among them were women who had walked for sixty or seventy kilometres, and their feet and legs were swollen so badly that they had to be sent to the infirmary. As many as eighty women and children had been packed in a single cattle car. and for 24 and sometimes 48 hours they had gone without a chance to get out to get food or water or respond to a call of nature. At Santa Maria Novella their numbers were such, while waiting to be sent on, that not only were there not beds enough for them, but the straw gave out, and many slept with nothing between them and the stone floor but the empty ticks.

Two reports reaching the Red Cross from Leghorn on different dates illustrate both the particular needs of the fugitives, the marshalling of sympathy which made great practical gains in each locality as the month advanced, and incidentally the way Americans dovetailed into the situation. Here by mid-November the numbers of refugees were such that the last lot had been put on the floor of the Goldoni Theater. In common with the other refugees reaching Leghorn, each had a straw mattress and a blanket. Food was very short, and work for the refugees had, much of it, been done at random. To make American help count and at the same time help organize the situation, the American consul undertook to take over in the name of the American Red Cross the distribution of clothes, milk and cocoa in two refuges sheltering 900 people.

The first report is from a Red Cross inspector on November 17:

Great need for condensed milk, rice, sugar for bahies. Most needed in way of clothing—men's and boys' suits and underwear, wasne's underwear, blouses, hygienic lines, handkerchieft, shoes on the place, the shops having been areded required cannot be found on the place, the shops having been areded required cannot be found on the place, the shops having been areded required cannot be found to the short short short should be said thread and needles. The lot of clothes sent from Rome has arrived, the blankets not yet. The comoul has written today to the manufacturer. He will have 500 of them. The pregnant women whom I counted up to forry will be in due the tasken care of by the maternity. Layettes needed, the maternity giving only medical assistance. Disinfecting soap and insect powder needed.

The second is from the consul, six days later, on November 23:

Yesterday we distributed over one hundred packages to men and women at Borgo Capuccini. When the distribution was over a shout went up from all the refugees. It was like applause in a theater after an excellent rendition of musica- bull for a minute and the control of the control of the control of the action of the control of the control of the control of the standard of the control of the control of the control of the hand been taken to give he rigor what suited her. There was no confusion. The number on each package corresponded to the number of the card. In the packages for women were two undershirts, an underskirt, a blouse, a small shawl, a bandana for the bead, an apron, woolen yarn and needles for making stockings.

The ideal way would be to have each package contain a complete outin, and then send the refugers in groups of twenty to the baths. Have them take a hot hath, using plenty of soap, put on the new clothes and leave the old to be disinfected and washed and returned to them. I have arranged with the hospital here for baths disinfecting and washing. I could not wait to do this with the refugees at the Borgo Capuccini. However, when I shall have completed their outfits, I will send them for a bath as above stand as

I have cards ready for Cantiere Galinare (now about 500 refugees, expect 300 more there). Miss R—— (American), are there now examining each woman and child, and making notes as to the size of each woman, etc., so that in connection with the card system, a complete outh may be packed suitable for each person and distributed without confused. Have supplied larges and mail combs to all bronzes, and also 600 cloths, air to each. They were in great need of same, Just rectived invoice for 1,000 shirts. Will go to Plus tomorrow.

The Red Cross committee which traversed the belt through which this stream of refugees was yet in process saw the varying provisions for them and carried their inquiries into points of destination in the south, recorded first of all their "deep and lasting impression of the magnitude, the seriousness and the heartrending tragedy of the refugee problem with which Italy has had to deal." From the refugees themselves they heard story after story of what befel them after they left their homes in the Friuli, and these they summed up as follows:

Women with young children and the nick, like others, came away underly, families often separated, usually with no time whetever to gather even things needed for the journey. They tramped in the mountains or along the roads from two to four days, sometimes a week, before reaching a railway station where they could be taken on trains or before being picked up by camions. In these first days they were subjected to every privation conceivable. Even after exaching the railways they were supplied with food irregularly and parhaps, they often had no chance to weak and often had been ten days or two weeks on their journey arrived in southern Italy is indescribable. After the first reash, arrangements were, of course, made in the cities through which they passed to supply food, and is some instances blankers and clothing; but even as far south an Naples many infants were found who had had no changes, and arrention.

In view of all the hardships and privations it is notable that the general health of the refugers in every city which we have visited is reported at present to be on the whole very good. Probably a more thorough medical examination might disclose more serious retained to the property of the property of the property of has indicated that, with few exceptions, there is no marked prevalence of digestive, nervous or infectious disease.

To appreciate the suffering and hardnhips involved in the sudend dislodging of perhaps a half million people, it is necessary to bear in mind the loss of their homes and possessions, the breaking up of the families, the enforced journey to distant and unknown places, where people and different food and speak disleres so different from their people and different so the people of the consumer are likely to be already overtused by the needs of the families of solders, and other local conditions resulting from the war. Intensifying this picture of misfortune is the fact that the whole population is uffering from a searcity of food and of fuel, from abnormally high prices, and a familiar in every country, has which are nowhere, perhaps, more serious at the present time than in fally.

To have cared for such a dislodged population would have taxed the ingenuity and resourcefulness of any country, could it have devoted itself to it with singleness of purpose. But it must be remembered that this was only the third of the tremendous reponsibilities engaging Italy in November. It had to salvage an army and turn back an invasion with its remaining organized forces. "Although inveitably," to quote the committee, "there has been much confusion and suffering invertheless an enormous amount of effective and systems.

assistance has been given from the beginning to the end of the long and painful journey which these thousands of refugees have had to make, and plans have been inaugurated for incorporating them into the communities to which they have come or are on the way."

In its national railways and its prefectorial system, Italy had agencies through which to work, which without doubt lent themselves to the emergency better than any governmental machinery we possess in the United States. The prefectos are the executive heads of the provinces into which Italy is divided. In function they correspond somewhat to the governors of our states; in responsibility to central authority and in the size of the areas they are assigned to the United States district attorneys may afford a better analogy. The prefectos met by the Red Cross committee on its travels impressed them as men of ability, character and intelligence. They have facilities at their disposal and, as representatives of the ministry of the interior in the central government, they form a well-knit and unified system of administration through which the problem could be dealt with nationally.

The first element in that problem was that of transportation. A general secretary for civil affairs attached to the supreme command, and hitherto charged with administrating those districts in the Trentino and in the neighborhood of Trieste which had been wrested from Austria earlier in the war, acted as the connecting link between the military and civil authorities in getting the refugees out. The major decisions as to where they should be taken were made by the ministry of the interior in Rome, which communicated with the prefects and learned how many each province could care for.

The main stream came down through Padua and Modena. The railroads direct to the west were engrossed by the army, and refugees were sent by a roundabout way to Milan, which became the general clearing station for Turin, Genoa, Leghorn and the northwest. The main funnel, however, was through Bologna and Florence and thence through Rome to the south, until the stream was switched to the Adriatic coast lines. Perhaps 75,000 were sent to Naples and beyond, 25,000 of them to Sicily. Many Venetians were gotten out by ferry to Chioggia and then down the east coast. In this scheme of things the road which parallels the Apennines, crossing Italy from the southeast to the northwest, on the route of the old Emilian way, became an important carrier.

#### Refugees by Rail and Wagon

THOUSANDS of refugees left towns or countrysides of their own volition and at their own expense, by rail or wagon. The government's responsibility was for those carried by special train, and these were confined to the cars or to the wholesale lodging-places arranged at such general clearing stations as Florence and Milan, where they were cared for until they were sent on under instructions from Rome to the provincial capitals. Certain regions with special facilities for housing refugees, such as the Italian Riviera and the Adriatic coast. with their empty resort buildings, were large receivers. Distribution within a province, as between towns and villages, was in the hands of the local prefects, each of whom went through somewhat the same process in their districts as was carried out nationally. This was the system, but in the rush of the early days it did not always work smoothly, and there was confusion and clogging at various points.

The second element in the problem of the care of refugees is that of income. To the prefects also the central govermment sent funds to feed the refugees while en route, ar in asile, and to provide daily allowances of, on the average, one lina a day per person (the figure differed in different localities and according to the number of children in a family) once they were settled in houses or rooms requisitioned from the purpose. At that point also, responsibility for their supervision was generally shifted to the mayors of the communes, but the national government continues to provide the allocation and to be responsible for broad measures for meeting their needs, under a sociality created high commission.

#### Work of the Italian Societies

SUPPLEMENTING and cooperating with this government activity, many voluntary Italian agencies have worked with devotion and an intelligent grasp of the situation. Especially should be mentioned the Italian Red Cross, which threw open to the refugees its rest and first-aid rooms in the stations: ran asile as at Florence; drew on its supplies for blankets, bedding, etc., as at Milan; and in some districts, as at Catania. has been the agency most concerned with providing for the refugees away from the main urban centers. And especially also should be mentioned the Comitatos Civile, a loosely federated group of local organizations, created to develop various forms of aid for the families of soldiers. These have in many centers developed a wide range of social work and in some localities at once expanded their scope to care for refugees. Usually, however, a distinct committee, called by some such name as Comitato del Profughi, has ben formed under the auspices of prefetto or sindaco (mayor) to raise a relief fund and to carry on work through sub-committees on housing, employment and the like. Apart from these general organizations, personal leadership or group action has brought special activities into play or gave them color-such as a sculptor, in Rome, who has scarcely touched chisel since the war began; a bishop in Vincenza, the active chairman of a provincial committee for the protection of profughi driven down from the mountains; members of the old nobility in Sicily: and a Scotch Salvation Army adjutant who for four days, with the knot of people she could gather about her, ministered single-handed to the mothers and babies coming through Naples. It was to a granddaughter of Garibaldi, who had served throughout the war as a nurse, that the Red Cross gave funds to open a creche and playroom in Rome. so as to enable some refugee mothers to work; and to a daughter of Lombroso funds to care for refugee orphans in Turin. In Naples an active Friulian committee came into being through members of the local university faculty, themselves natives of Friuli; and an energetic committee of citizens of Venice, under the lead of a professor of international law at the University of Padua, also a Venetian, followed their refugee townsfolk to the sea-coast colonies and opened offices at Rimini. The organization which bore the brunt of the largest emergent demand and which in its systematic provision was outstandingly first, is the Umanitaria of Milan. with 60 per cent of its members made up of working people. The umanitaria doubled the capacity of its dormitories for immigrants at the station, erected tents in the yards, ran a large restaurant which handled thousands every day and served as many as 3,000 refugees at four o'clock in the morning, opened an infirmary with doctors and nurses, organized 100 students into four shifts of six hours each, to serve as aides on the station platforms, and cooperated with the municipal housing and employment bureaus, the labor exchange and agricultural society in a well-conceived scheme of placement and distribution.

## **Book Reviews**

SINGLE TAX YEAR BOOK

By Joseph Dana Miller. Single Tax Review Publishing Company. 466 pp. Price \$2.50; by mail of the SURVEY \$2.70.

This handsome and substantial single tax volume attempts "to cover with sufficient amplitude such facts of moment as may be deemed matters of reference, and to provide a world-wide survey of the movement." The strictly historical matter occupies approximately one-half of the book and is made up of contributions from more than a score of writers from various parts of the world. The remainder of the volume consists of a collection of miscellaneous information. including discussions of the relation of the single tax to public finance, to socialism, to labor unions, immigration, panics, and a number of other subjects. This will serve single-taxers as a veritable arsenal of arguments for future combats. The book is planned to supplement rather than to supplant the standard works of Henry George, Shearman, Fillebrown, Post and Young. It contains little that is new but much that has been widely scattered. Its publication reduces to a scant half dozen the books which one must read who desires a knowledge of the single tax philosophy, its history and its applications. This means that it will serve the movement well.

One must sympathize with the editor who attempts to manage a team of such impetuous and independent steeds as make up the single tax group. On the whole Mr. Miller appears to have proved a very successful whip, but there must have been some slight agitation when an old wheel-horse like W. S. U'Ren of Oregon emitted the following (p. 45): "Judging from the results obtained in British Columbia and other places north of the line, most of us do not helieve a mere exemption measure is worth a fight, even if we could be sure of its adoption. The chief result in the British provinces now seems to have been a boom in land speculation and necessarily higher prices for land." This, in a single tax publication, certainly makes interesting reading. But probably no one could decide whether the conflict is real or merely apparent when Dr. Wilcox insists (p. 238) that "the fundamental purpose of the single tax is not to lessen ground rents;" while beside him Byron W. Holt, after disposing of all other theories of crises with a light wave of the hand, announces that "prolonged industrial depressions can be explained by high ground rents and by them alone" (p. 252) and prescribes the single tax as the remedy.

The book, for the most part, appears to be reasonably accurate, and portions of it, notably Madsen's account of the situation in Great Britain and Young's bibliography, are exceedingly well done, There are occasional slips, however. For example. Mr. Clemens is mistaken when he reports that in Saskatchewan "an unearned increment tax is levied for provincial purposes" (p. 88). The 1907 act in this province levied a rate of 1 cent per acre and not 1 per cent (p. 87), as stated. Again, British Columbia does not, as one writer contends (p. 264), levy "an equal tax on all farm land whether it is improved or not."

The volume is a peculiarly interesting mixture and furnishes what is probably a very true cross-section of the movement today. There remains a great plenty of the dogmatism, the intolerance, the assertiveness in the absence of evidence and the "professor-baiting" that have been so characteristic of single tax literature in the past. There are also, however, some indications of the growth of the more moderate opinion which recognizes limitations and refrains from damning utterly those who are not persuaded of the truth of the entire gospel of Henry George.

#### ROBERT MURRAY HAIG.

THE INSTITUTIONAL CARE OF THE INSANE IN THE UNITED STATES AND CANADA—VOL. IV By Henry M. Hurd and others. The Johns Hopkins Press. 652 pp. Price \$5; by mail of the Surery \$2.25.

The fourth and final volume of The Institutional Care of the Insanc in the United States and Canada is a fitting companion to its predecesors. It contains an account of every such institution in Canada, arranged by provinces, and brief biographies of physicians and philanthropists who devoted themselves to this work.

The chapters on Canada are on the same scale as those in the three volumes concerning the United States, but the historical chapters are rather fuller. There is naturally a marked similarity in the development of the care of the insane, and Canada profited by the experience of her older sister. Conditions in the martitime provinces showed such shameful neglect as we had under the earlier systems, and improvement was also stimulated by the splendid crusade of Dorothea Dix. The institutions of the western provinces are among the best in the world. British Columbia has best in the world. British Columbia has

a special problem in caring for insane Asiatics, and the chapter on Quebec gives interesting particulars of the work done by religious societies.

The biographies are brief, and are disappointing because they do not mention living specialists. They seem to be culled from obituary notices, and carry the adage de mortuis nihil nisi bonum to excess, but some interesting controversies and picturesque personalities are recorded. Sister Théophile de Jésus, a French nun, is the only one of her sex to secure recognition, but some priests are recorded who are worthy to stand with Father Damien. Most of the biographies are of physicians and many show interesting similarities. The "remarkables," as old Cotton Mather would say, are the number of physicians of Scotch descent, the number who saw military service and the great average Those who died youngest longevity. were, for the most part, taken off by pneumonia or allied complaints, showthe defective ventilation of the earlier asylume

One phase of the Canadian chapters calls for commendation. In Canada there is such a contrast between the Anglo-Saxon and the French civilization that the descendants of these two main streams of population are usually ignorant of each other's achievements and virtues. It is a pleasure to record that even when religious and racial strife was bitterest, both factions cooperated in the care of the insane, and that in this book credit is impartially given to the work of the opposing creeds.

The final volume contains an index to all four volumes, which is surprisingly adequate without being unwieldy, and it also has a fine map, showing the locations of all the custodial institutions in the United States and Canada.

IOSEPH F. GOULD.

THE THEORY AND PRACTICE OF SCIENTIFIC MANAGEMENT

By C. Bertrand Thompson. Houghton

By C. Bertrand Thompson. Houghton Millin Company. 319 pp. Price \$1.75; by mail of the Survey \$1.82.

. America's contribution to the science of modern industry has been in the direction of large-scale production and of improved methods of shop control and organization. But neither in the matter of industrial research in the field of process or material, nor in the scientific organization of trade and marketing have we made progress that compares with that of our present military foe. Advance in all these directions at once, however, will be imperative from this time forth if we intend to sell goods in the world's markets in active competition with other nations. The prob lem of production has become a problem of scientific management with a vengeance.

It is unfortunate, therefore, that those whose prime interest is in matters of shop practice should have usurped the term "scientific management." when they write, as Mr. Thompson does, about the reorganization of shop methods, they give a discouraging impression of interests at once extremely local and restricted. They fail, as the present author fails, to relate their efforts to the larger problems of the generation. Their work suffers and loses a needed force and driving power by being seen in relation to no idea bigger than itself. In consequence, the present volume comes dangerously near to being a complacent and tidy book upon a subject in which there are still uncharted areas and over certain aspects of which controversy still rages.

The new science of management, even its most detailed shop aspect, has relation to problems of democratic control of industry, of fatigue, of overproduction, of trade unionism, to name only a few, which it is time its protagonists understood and dwelt upon with some statesmanship. It may be unfair to ask that scientific managers show some interest in problems of marketing, chemical research and other aspects of the problem of efficiency; but it surely is to be expected that in their chosen field their pronouncements and conclusions be clear and definite.

Despite its limitations, Mr. Thompson's book is nevertheless worth attention. It summarizes the achievements of the Taylor system: it makes available an excellent bibliography; it states with fairness the prevalent efficiency engineers' ideas about the workers and their unions. It is, indeed, a highly representative book. The only criticism which it is fair to make under these circumstances is of the rather narrow outlook of problems and interests which

ORDWAY TEAD.

COOPERATIVE MARKETING

it represents,

By William W. Cumberland. Princeton University Press. 226 pp. Price \$1.50; by mail of the SURVEY \$1.62.

The title of this book is misleading, for it covers only the methods of cooperative marketing in the citrus industry of California. As a monograph in that field the book easily displaces its predecessors, for it gives a clear, detailed, accurate statement of the forms and business methods of local associations, district exchanges, and the central exchange, and treats these matters more comprehensively than the works of Powell and other earlier writers.

The first chapter is the only one departing from the generally high stand-ard of the book. It contains loose expressions and unwarranted generalizations. The treatment of the subject is narrow, European cooperative types

are not mentioned. The cooperative laws and forms of other American states are ignored. The book has therefore slight value as a manual of general cooperative marketing.

TAMES FORD.

YOUNG FRANCE AND NEW AMERICA

By Pierre de Lanux. 153 pp. The Macmillan Company. Price \$1.25; by mail of the SURVEY \$1.35.

"America will reap the fruits of her clean, unaggressive, honest policy; her prestige everywhere is growing, which means immediate and concrete advantages. But America has to be revealed to herself with all that she contains." America as the leader of the world's advance guard of democracy, as the disinterested friend of the young, of those in every land and every clime whose hands and brains are shaping a new world out of the ruins of the old, is the view unfolded in the five chapters of this well-written book,

Ignorance of her own vital forces, ignorance also of other countries is yet holding back that influence which one day this republic will exert. Her vital movements in art and literature, no less than in politics and social reorganization, must be brought into a more intimate and fertilizing contact with those of the Old World, and more especially with those of the great sister republic. France. What these movements are and how they are weaving a new consciousness of mutual responsibility and recognition is told with an amplitude of apt quotation and with a charm which makes this contribution to the literature of foreign relationships a real source of inspiration.

AMERICANIZATION

Edited by Winthrop Talbot. 320 pp. H. W. Wilson Company. Debaters' Hand-book Series. Price \$1.50; by mail of the SURVEY \$1.62.

The number of inquiries on this subject recently received by the SURVEY would appear to make the publication of this handbook and annotated bibliography most timely and useful. The editor admits that he has been unable to crowd into this one volume all the subject matter which strictly speaking appertains to Americanization. He has succeeded, however, in elucidating by a sufficient number of quotations and extracts those phases of that process which just now hold public attention and permit of rapid progress in spite of war conditions.

The first part gives thirty-one texts on Principles of Americanism, including some unusually good recent contributions. The second part, Essentials of Americanization, lightly touches upon such varied aspects as assimilation of the Indian and American education in the Philippines, with a sprinkling of purely

inspirational poems and texts. Part three, dealing with the technique of race assimilation, gives a number of useful and authoritative writings on schools, libraries, the home, naturalization, living conditions, industry, and labor unions in this relation. B. L.

EDUCATIONAL SOCIOLOGY

By David Snedden. Teachers' College, Columbia University. Part I, 38 pp. Price \$.55; by mail of the Survey \$.58. Part II, 69 pp. Price \$.80; by mail of the Survey \$.85.

Dr. Snedden and Teachers' College have rendered a real service in making available this comprehensive analysis of so new a subject. Educational sociology is called by him a "hyphenated" subject. Its function is selective. It chooses those elements of sociology that are applicable to education, those portions of education that are assisted by the knowledge thus carried over, and makes the connection. The appearance of these studies so closely on the heels of Smith's Introduction to Educational Sociology (reviewed in the SURVEY for November 10, 1917), shows the gathering interest in what the hitherto individualistic practice of pedagogy has to learn from sociology. Dr. Snedden's treatment is stimulating to the student. Indeed, by the time one has read to the end he is half inclined to be generous and forgive the author for excluding from his bibliography the most widely known journal of social work printed in this country!

WDI.

DIRECTORY OF SOCIAL WORK FOR BALTIMORE AND MARYLAND, FOURTH EDITION Compiled by Baltimore Federated Chari

ties. 456 pp. Price \$1; by mail of the Survey \$1,10. The test of a successful reference book

is the quantity, quality and accessibility of its information.

The Directory of Social Work for Baltimore meets all three requirements. It not only lists descriptions of the work of local agencies, but contains state-ments about all of the more important national organizations, whether they have offices in Baltimore or not. The example of Baltimore in this respect might well be followed by other cities.

The information contained in the directory compares favorably in kind with those issued elsewhere. It is, moreover, unusually available. Even a stranger to Baltimore and to social work will have no difficulty in using this book. Brief explanatory notes introduce the newcomer to the topical index, which is effectively grouped, to the alphabetical list of the agencies, and to the list of churches which forms part of the directory. The title of the book is changed from Baltimore Charities Directory, and is an improvement in accordance with the new name of the National Conference of Social Work. K. de S.

"STEP LIVELY, PLEASE" IN SOPRANO

"EAT! Did you say eat? I can't get enough." Thus the trolley girl, coming in pink-cheeked from a fourhour run on a snapping cold day. They seem to be having the time of their lives. these girl conductors on the New York surface lines. Recruited from department stores and factories, laundries and domestic service, the outdoor life has proved a stinging tonic. There's the excitement of the streets, the zest of being captain of your craft-"Watch me make 'em step lively," said one girl-the trig new uniforms and the smiling approval of the passengers.

But most of all, there's the wages, Heretofore they have been ten- and twelve-dollar-a-week girls. Now they get twenty-seven cents an hour, which, for a ten-hour day, adds up to sixteen dollars or more a week. This is equal pay for equal work.

All of this, however, fails to reckon with the very serious drawbacks of conductoring for women-the long hours of standing, the nervous excitement of piloting even a rail-bound vehicle through crowded streets, the irregularity of the hours and the night work. These same girls, if they worked in a factory or a mercantile establishment, would be limited to nine hours a day and fifty-four a week, with one day of rest in seven and no night work.

Women are newcomers in transportation. The New York City Consum-ers' League will seek to protect them from the start by introducing in the legislature a bill extending to them the mercantile and factory provisions of the law. It is generally believed they have come to stay in spite of the opposition of organized labor, which denies the shortage of male labor set forth by the companies as the reason for employing them, and charges further that the companies are seeking cheap, docile and unorganized workers; that there are many unemployed men in New York today, many of them heads of families. Every woman thus employed on the street railways makes it more difficult for these men to find work. The effect of the employment of women therefore may be an increase in the unemployment problem, as well as a lowering of the wage scale.

About 300 women are working for the New York Railways Company on twenty lines. They must be between 21 and 45 years of age, pass a physical examination and take a short course in the company's school, followed by five days' work under coaching, with pay. The working day is of ten hours, distributed over a period of twelve or fourteen hours, the shifts starting at 5 A. M., 11 A. M. and 6 P. M. At meal time there is a break of from one and a half to three hours

On the Brooklyn Rapid Transit Company's lines, a typical day's work would be more broken-from 6 to 9 A. M. and from 4 to 7:30 p. M .- but fewer hours of actual work. About one thousand women in all work in Brooklyn, the greater number of them ticket-sellers. who have been thus employed for some years, some car-cleaners, about two hundred guards on subway and elevated trains and one hundred and fifty conductors on the surface. The guards get twenty-four cents an hour, the surfacecar conductors twenty-seven cents. On the Hudson and Manhattan Railway Co., operating the McAdoo tube to New Jersey, the twenty women guards are paid the same as the men-twentyfour and one-half cents an hour for a nine-hour day. All of the lines mentioned are establishing rest and recreation rooms and all will advance wages for length of service as they do for men.

NEGROES AND ORGANIZED LABOR

DISCRIMINATION against Negro workmen by society and by labor unions and exploitation by employers were among the topics discussed last week at the conference in New York of the National League on Urban Conditions among Negroes. Officers of Negro welfare associations and employment agencies told of skilled Negro workers who, denied opportunity to work at their trades, were compelled to seek employment in unskilled occupations at lower pay. Others, from northern states, spoke of the total lack of skill of many of the Negroes who have recently migrated from the rural sections of the South to the North, and of the necessity of training them before they were fitted for any sort of work.

The attitude of the American Federation of Labor toward the Negro and the proper attitude of the Negro toward the federation was freely discussed. George E. Haynes, professor of Sociology at Fiske University, Nashville, Tenn., reviewed the attitude of the American Federation of Labor. He said that in 1897, 1902 and again in 1917 the federation had adopted resolutions of a friendly nature, emphasizing the desirability of organizing the colored people. The individual affiliated organizations had taken a different attitude, however, In 1902, for example, the International Union of Stationary Engineers voted not to accept Negroes as members,

Delegates to the conference from various cities reported that, whatever the attitude of the international unions, the locals will not accept Negroes as members. In Chicago, one delegate reported, the leaders want the Negro to come in, but the rank and file will not allow it. Even where Negroes have forced their way into unions they are often kept from working.

There was some difference of opinion as to the attitude that the Negroes should take toward the unions. Wherever there is any disposition on the part of the unions to admit the Negro, one delegate asserted, it is because they are

looking out for their own interests, not his. "Let the unions come in with clean hands." said this delegate, and then the Negroes will feel like joining and not before. Other delegates pointed out that there was a reasonable ground for a suspicious attitude on the part of the unions, because Negroes sometimes take the jobs of men on strike. "The Negro cannot afford," said a delegate from Virginia, "to be known as a scab and a strike-breaker. Whatever the motive of the unions may be, when they are willing to admit Negro members it is wise to accept the invitation, if it means protection." To this the first delegate replied that in many cases the only chance a Negro ever had at a decent job was to go in as a strike-breaker, and that is because union members, as well as other white men, have prevented Negroes from working at trades which they were competent to follow.

Professor Haynes, in closing the discussion, declared that the Negro believes in collective bargaining. He laid stress on the possible concilatory influence of the Negro, and said that a new industrial opportunity is being offered him just at a time when labor and capital have struck a truce in order to win the war. At this stage in the development of the nation and the world, he said, the Negro is asking that greed and paternalism on the one hand and race discrimination on the other shall both be abblished.

Resolutions adopted ask the American Federation of Labor to accord the same rights to Negroes that they claim for their white members and to include in its membership skilled and unskilled Negro women and men; and urging the appointment of "one or two competent Negroes" to serve in each of the bureaus of the Department of Labor by assisting in the adjusting and distribution of Negro labor.

### WAR CHARITIES MERGED FOR ECONOMY

HE all but countless list of war A charities, committees and funds may be sharply reduced with a consequent increase in efficiency and coordination and a decrease in overhead expense as a result of two new organizations incorporated under the laws of New York last week. The first of these is the French Heroes Lafayette Memorial Fund. Inc., and the second the National Allied Relief Committee. Both have offices at 360 Madison avenue, New York city, and the prime mover in both is John Moffat of New York, who has been active in war-charity work and was the originator and director of Heroland.

The French Heroes Lafayette Memorial Fund, Inc. (combining two previous organizations of similar name), has for its chief purpose the purchase of Lafavette's birthplace-the Chateau de Chavaniac-Lafayette, situated in the commune of the same name. St. Georges d'Aurac, Haute Loire, France, with adjoining property. Here it is proposed to establish a permanent memorial to Lafavette and the Frenchmen who served with him in the American Revolution, collecting appropriate historical objects of that war and of the present one. The committee will continue the sanatorium. the orphanage and school now operated at the chateau and may, by the terms of its bylaws, establish anywhere in France these and similar "institutions for the relief and care of crippled, maimed, blinded or sick soldiers, and homeless or destitute or tuberculous women, and for the relief or education of children."

Each of the institutions now in existence has its separate French committee —Leon Bourgeois is chairman of the sanatorium Mrs. Edward Tuck of the orphanage and M. Painlevé, recently prime minister, of the school—and the chief function of the fund in this country will be the raising of funds. Among the directors are Frederic R. Coudert, James M. Beck, John G. Milburn, George von L. Meyer and President Hibben of Princeton.

The National Allied Relief Committee. Mr. Moffat states, has taken over the raising of funds for the following: the Belgian prisoners in Germany, with headquarters at Havre and practically a branch of the Belgian government: La Bien-etra du Blessé, of which the Marquise d'Andigné is the active head in France: the Millicent Sutherland Ambulance Hospital in France; the Paignton Hospital; the fund for training disabled British officers: the Allied Home for Munition Workers in London; the war charities of the queen of Belgium, and various others. Mr. Moffat states that already a reduction in expense has been achieved through a cutting down of circularizing and through winding up the affairs of two or three committees whose functions-almost entirely the raising of funds-can be performed by others

As a general principle, Mr. Moffat states, the committee will merely raise money to be transmitted for use abroad. Under its articles of incorporation the committee is authorized "to amalgamate under the management of this corporation various committees which have been and are now engaged in raising and receiving funds by voluntary contribution for various kinds of war relief among the armies and peoples of the United States of America, Great Britain, France, Belgium and Italy and their allies in the present war;" to raise and disburse funds directly or on behalf of any constituent or allied committee or to act as its agent.

Charles W. Eliot is honorary presi- cently offered a prize of \$500 for a text-

dent and Norman Hapgood, president; Edwin G. Merrill is chairman of the National Committee and John Moffat vice chairman. Vice-presidents and members of the committee include prominent men and women who have been active in war relief work, governors of states, college professors and preachers.

### PROSPERITY AND PROGRESS IN PERU

PERU, some ten years ago, entered a period of political and economic stability which has made possible a rapid development of her natural resources and of transportation facilities without which her vast potential wealth remained locked up in mountain fastnesses. Just now, owing to the world's demand for the materials which that country has to offer, it is enjoying a period of unprecedented prosperity. It is true there were political disturbances at the beginning of last year which may or may not have originated from German machinations: nevertheless, owing to the prudent financial administration of the state and to the enterprise of her commercial classes, it is looking back upon a year of greatly increased trade and industrial advance simultaneous with a notable reduction of the public debt.

The abnormal demand for labor and the world-wide publicity given a few years ago to the abuses which then prevailed in the rubber plantations and mining regions have led to a considerable improvement in labor conditions. The plantation laborer, more particularly, has been given greater security and freedom by recent legislative enactments.

In spite of these improvements, however, the condition of Indian aborigines is still deplorable in many districts. Recent numbers of El Deber Pro-Indigena, a monthly publication edited at Lima by Dora Mayer, give instances of apparent cruelty and unfairness in the treatment of natives by government officials. The society for the protection of the aborigines, of which this lady is an officer, feels that the administration of the country is not representative of the poorer classes and is making a strong effort to bring their needs to public at tention.

Voluntary charity is strongly developed in Peru, and there are many societies for the assistance of the sick and destitute, some of them heavily endowed, and most of them under religious (Roman Catholic) auspices. A great evil, both among the aborigines and among the poor whites, is that of intemperance. The government, stimulated by similar movements in other countries, is now attempting to combat it by a vigorous propaganda and has, for instance, recently offered a nize of \$500 ing a text.

book on temperance suitable for use in the public schools.

Educational opportunities are decidedly underdevloped; but here also reforms are under way. Thus the government has initiated a system of scholarships entitling students from various parts of the country to undergo a course of study at a technical school in Lima. All the expenses are met by the national government, but the student, in return, must bind himself to serve the government for a period equal to the term of scholarship.

# WAR, PEACE AND SOCIAL

"R ESPOND to the emergency of war; prepare for the emergency of peace"-these were two rallying calls of the fourth annual convention of the Vocational Education Association of the Middle-west, held in Chicago, January 24-26. With surprise some of the teachers who heard one call were made to realize that even education must answer the demands of a country at war. Others took up this idea with such unqualified enthusiasm that it almost seemed as if they felt the need of justifying education by proving its immediate practi-cability. But the great majority of thoughtful men and women who attended the conference found under the leadership of its speakers a more fundamental defense of the two principles stated above, and a more creative ideal to guide them.

Exchange of experience showed that the response of the schools to war needs has already grown to large proportions. Burridge D. Butler explained the organization of the Boys' Working Reserve, which plans to place high-school boys on farms for the summer holidays, with a careful "follow-up" system to see that both the boy and the farm profit by the experience. To make it possible for city boys to give intelligent service on farms, the Lane Technical High School of Chicago is offering courses this winter in first essentials of farm life, such as the care and harnessing of horses, which have become habit to the country boy but which are strange and appalling problems to the average city boy. In many schools the girls are making a large and steady output of Red Cross goods. Convinced that the boys also could help the Red Cross, the Lane school worked out models and blueprints for stretchers, invalid tables and other useful articles which could be made in the school shops by the boys.

The steadily growing plans for developing vocational education along sound psychological and economic lines were brought out by Helen T. Woolley, director of Cincinnati's Vocational Bureau; Anne S. Davis, vocational advisor of the Chicago Public Schools, and by the discussion of the Smith-Hughes

# Imported and Domestic Lingerie at McCutcheon's

This is one of the most complete Lingerie departments in the country and includes a wonderful collection of French Hand-Embroidered goods as well as Madeira, Philippine, etc. We are able to offer these at prices that are certainly very favorable to our patrons.

American-made Lingerie has developed and improved marvelously in style and every desirable feature. Many of these goods equal those of foreign manufacture. They have the added advantage of being lower in price.

French Chemises, 85c, \$1.25, 1.75, 1.85, 1.95, 2.50 and up.
French Combinations. \$2.25 up to 10.50.

# James McCutcheon & Co.

Fifth Avenue, 34th and 33d Streets, New York

bill and the work of the Federal Board for Vocational Education. But inevitably most of the discussions swung back to the problem of the vocational school in relation to the war and to after-war conditions. The re-education of the crippled soldier, including the description of England's plan of placing these men in homes for crippled children, giving each man for work-partner a child with a disability similar to his own, was the most concrete problem of this type.

The uniting of social service with educational function was the most in-

spiring idea that grew out of the convention. This came forcefully from Prof. John Dewey and Prof. Arthur D. Dean, both of Columbis University. Dr. Dean, who is professor of vocational education in Teachers' College, urged that all high schools give over regular school time each week to Red Cross work, devising various forms of work for the younger and older boys and girls. He showed the possibility of invigorating the all too formal manual training work by this absorbing social motive, and he embhasized the ethical

# GETTING OUR HEADS TOGETHER

The Proceedings of the 1917 National Conference of Social Work are available.

An invaluable account of war-time discussions at the largest National Conference in the forty-five years' history of this organization. For the war-time volunteer in Social Work, as well as the professional.

Over 100 leading addresses, more than 1200 index references. Divisions on: the war, family, community, health, children, corrections, mental hygiene, public charities, social insurance, rural problems.

"A hundred years of enlightened leadership in England and America has led up to this Conference."

# NATIONAL CONFERENCE OF SOCIAL WORK 315 PLYMOUTH COURT, CHICAGO, ILL.

value for the child and the community of the school's recognition of the function of such work in its daily curriculum.

Professor Dewey analyzed the tremendous potentiality within some of the machinery, if it were guided with vision, for the building of a wiser future democracy. Recalling William James' es-say on The Moral Equivalent of War, in which a "conscription for peace" is urged, Professor Dewey disclosed the op-portunity for using the mechanism of compulsory military training for the purpose of a great nation-wide training for social service. The provision in the New York law establishing state-wide military training that permits the substitution of various "equivalents" for military training, along the lines of socially valuable vocational training, was cited as the advance guard of a wider movement. He suggested that teachers and all others who believe in constructive education unite to work towards the realization of this stirring idea, a nationwide training, including all young men and women, for social service in the United States. The creating of a workable plan for its fulfillment now. while the mechanism is still flexible, is a challenge to all people who see in education the hope of democracy.

### TO SAVE 100,000 BABY LIVES THIS YEAR

A MERICA'S second year in the Year." The goal is to be "Children's Year." The goal is to be the saving of 100,000 lives ordinarily sacrificed to infant diseases. Plans to this end have just been announced by the federal Children's Bureau, of which Julia C. Lathrop is head.

April 6 is the anniversary of Ameri-

ca's entry into the war and the inauguration date of this new campaign. Following the methods of raising both our armies and the money for the Liberty loan, each state will be assigned a definite quota of the 100,000 lives to save. State councils of defense and the state women's committees are being called upon to be responsible for the state quotas.

Each year 300,000 American children under five years of age die. Public health authorities, says the Children's Burcau, agree that half of these deaths are easily preventable. To inaugurate "Children's Year" a nation-wide weighing and measuring of babies and children of pre-school age will be made. No such general test of the well-being of children has ever been attempted, says the bureau. "It will show each community what its children need if the men of the rising generation are to be free from the physical defects which the draft has revealed."

The actual methods by which lives are to be saved during the twelve months are those whose effectiveness has already been demonstrated. Briefly, they are described as follows:

"The registration of births so that there may be an immediate record of every child born; and nursing and medical skill may be provided wherever family income does not permit its being secured independently.

"For every mother prenatal care, necessary care, of doctor and public nurse at confinement, and after care.

"Children's conferences where well babies can be taken periodically to be weighed and examined, and clinics where sick children may be given medical advice.

"The organization of state and city

divisions or bureaus of child hygiene.
"The guarding of the milk supply, that every child may have his quota of clean, pure milk.

"An income making possible decent living standards."

# RESULTS OF THE ADAMSON

W HEN the country was threatened with a general strike on the railroads in the fall of 1916, the reply of the managers to the demand for a basic eight-hour day was that if they yielded the men would not get an eight-hour work day and that it would cost the railroads anywhere from fifty to sixty million dollars annually. In the report just issued by the Goethals commission, which was appointed to observe the operation of the Adamson law, it appears that the managers were reasonably correct. The report, which is based on figures for the month of January, 1917, states that few men outside of the freight yards have had their hours reduced and the cost to the railroads in extra or overtime payments has been at the rate of sixty-one million dollars,

The Adamson law, it will be remembered, does not establish an eight-hour bered, loss not establish an eight-hour day. It declares eight hours to be "a day's work, and the measure or standard of a day's work for the purpose of reckoning the compensation," and it provides for pro rata payments for overtime. In a summary of the report of the Goethals commission appearing in the United States Official Bulletin, it is stated that a reduction in hours of work to eight has been enjoyed by over 11,000 yard crews. Continuing, the report states:

"In road service the reduction in hours has been slight. Where hours have not been reduced the law has had the effect of increasing wages.

"In road freight service the increase in wages averages about 15 per cent and in yard service about 25 per cent. Where, however, there has been an actual reduction in hours, the total pay of the individual worker is not necessarily increased by the eight-hour law, and his pay may actually be less than it was in the year 1916, before the law became effective.

"A detailed study of the payrolls indicates that 12.6 per cent of the employse in the classes named received no increase in pay in January, 1917, under the eighthour law; 30.2 per cent received less than \$10 per month increase; 22.7 per cent received from \$10 to \$20 a month increase, and 34.5 per cent received \$20 or more per month increase. These figures are subject to modification to the extent that hours of work have subsequently been reduced."

One of the sections of the Adamson law provides that pending the report of the commission and for thirty days

Gives every federated club in the United States, and in used throughout the year all over the country. Entertainers, lecturers, etc., address for term es and testimonials, Helen M. Winslow, Shirley, Mass.

thereafter the standard of wages shall not be reduced. It could not have been foreseen when that law was enacted that before its expiration the United States government would be operating the railroads. The Goethals report was made public January 24. On January 29 a Railroad Wage Commission named by W. G. McAdoo, director-general of railroads, began to hold public hearings for the purpose of investigating the subject of wage demands on railroads.

The commission consists of Franklin K. Lane, secretary of the interior; Charles C. McChord, member of the Interstate Commerce Commission; J. Harry Covington, chief justice of the Supreme Court of the District of Columbia: and William R. Willcox, of New York.

Nothing could be more indicative of the change that has taken place than the coincidence in time between the completion of the labors of the one commission and the beginning of the work of the other. The Adamson law, which created the Goethals commission, was passed under the influence of a controversy which for magnitude and potential danger to the public exceeded anything previously known in the history of the country. The Lane commission, on the other hand, begins its work in an atmosphere of impartiality and goodwill that could not possibly exist under any other circumstances than government control, with the consequent elimination of the element of contest between employer and employe.

In a statement at the opening of the public hearings. Chairman Lane said: "This commission understands that its duty is not to sit as a body of judges to determine a contested case as between the employers and their employes." The chairman pointed out the necessity of making the railroads serve the public needs in the highest possible degree now that the country is at war. "To this end," he said, "it is fundamental that the employes should feel that a spirit of justice animates the government. We should seek to give not what may be forced by contest, struggle, intimidation and coercion, but what is fair, all things considered. This is our attitude. We look at the problem before us as not what does organized labor or unorganized labor demand' but what with war upon us and living costs as they are, should be the compensation given for the services rendered.

For the first time in an inquiry preceding an adjustment of wages on the railroads all of the employes are to be given a hearing. Said Secretary Lane: There are 1.800,000 employes on our railroads. Some are organized and have The great great power for self-help. majority, more than two-thirds, are, however, not organized. We shall consider both classes, and upon an equal

footing, so far as that may be practicable. This very statement of the number emploved makes evident the unparalleled size of the task that is before us. If with this fact is considered the extent of the territory covered and the significance of the different conditions obtaining in the varying sections of the country, it will at once be realized that no such hearing as this has been held before nor one that carries such possibilities in affecting for good or ill the mass of our workers in all industries and the part they will play in carrying on the pressing duty of making war with characteristic America energy, enthusiasm, and masterfulness."

### THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

Associa Inc.

### KRY

If you know the name of the agency or organization, turn direct to the list-ings (3d column) for address, corre-sponding officer, etc. [They are ar-ranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject clas-sifications, as "HEALTH," printed in capitals.]

capitals.]

Correspondence is invited by the agencies listed; questions answered (rendose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your community or profession in an organized movement which is grappling with some country-wide need or causer.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

### WARTIME SERVICE

I TOW the SURVEY can serve"
It was the subject of an informal conference held early in April, in
our library, to which we asked the
esecutives of perhaps twenty national
social service organisations. The consocial service organizations. The con-ference was a unit in feeling that as a link between organized effects, as a means for letting people throughout the country knew promptly of needs and national program—how, when and where they can count locally—the SURVEY was at the threshold of an opportunity for service such as has reldem come to an educational exter-

prine.
The development of this directory is one of reveral steps in carrying out this commission. The executives of these organizations will ensure questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands.

Listings \$3 a month for card of five lines (inding one listing in SUBJECT INDEX by full as and three by initials), fifty cents a month for h additional line. No contracts for less than so months. Additional charge of \$1 for each age of copy during three-month period.

SHORT BALLOT ORGANIZATION—Woodrow Wilson, pres; Richard S. Childs, see'y; 383 Fourth Ave., New York. Clearing house for information on short ballot, commission gov't, city manager plan, county gov't. Pamphlets free.

SURVEY ASSOCIATES, INC.—Robert W. de Forest, pres.; Arthur P. Kellogs, secy; publishers of the Survey, Paul U. Kellogs, editor; Edward of the Survey, Paul U. Kellogs, editor; Edward seditors; departments: Civilant associations, editors; delitors; departments: Civilant association, clinical addustry, John A. Fithal; Health, Alles Hamilton, M.D., Gertrude Seymour; Education, Crime, Wisthrop D. Lane; Foreign Service, Bruno Lasker.

TURKEGEE INSTITUTE—An institution for the training of Negro youth; an experiment in race adjustment in the Black Belt of the South; fersiables information on all phases of the race prelien and on the Tuskegee Idea and methoda. Robert R. Moton, prin.; Warren Logan, treas.; Emmett J. Soutt, see'y; Tuskegee, Mar.

WOMEN'S EDUCATIONAL AND INDUSTRIAL UNION-Miss Helen N. Henry, exc. secy, 264 Boylston St., Boston. Information regarding women's work, vocational opportunities, social veriare legislation Mass; practical training in institutional management through industrial departments. Reading first on women's vocations.

# FRENCH WAR SPIRIT INTERPRETED BY FRENCH MEN AND WOMEN

### A CRUSADER OF FRANCE

Translated from the French of Captain Ferdinand Belmont.

Introduction by Henry Bordeaux. Second Edition already issued.

OPINIONS WORTH READING

Henry Bordeaus, in his introduction to this beautiful book, says: "They will be read for many a long year, as were read and are still the letters composing is feeled thou sour, or as the Journal and Correspondence of Maurice and Eugenia de Gueria, for their sincerity, their feeling for large their special provincial flavour, their profound intimacy, their feeling for in their accent\_ilous ferrors. But there is something new

in their accent."

Miss Ratharine Lee Bates, in a letter to the publisher says: "I have read every word of "A Crusader of France," in the says of the

John S. Phillips, Red Cross Mugazine, says: "My hearty thanks for 'A Crusader of France.' I have never read such a direct transference to the printed page of a pure said beautiful spirit. So far as I know this is the choicest and

lovellest piece of literature the war has produced. What hope it gives in the suggestion of the purified soul. And from our professional standpoint, what faith in man's expanding ability to express his fluent self. You have left me in your debt.

Rev. Levingelon L. Taplov says: "I am reading 'A Crushder Rev. Levingelon L. Taplov says: "I am reading 'A Crushder wonderful book in some respects, I think more wonderful land. 'A Student la Array, with which one instituctively in my hopes for the days to come to get this living word out of the beart of Roman Charle.' To know bound Hankey through his 'Letters Home' helps to make it seem worth which that Jesus about have persyed that we all night he would be a seem of the seem of t

# UNDER FIRE (Le Feu)

Translated from the French of HENRI BARBUSSE by FITZWATER WRAY.

Eleventh American Edition Just Published.

The Brooklyn Daily Eagle says; "It is a terrible and a beautiful book. It is terrible because it is so patently true -and to tell the truth of this war from the soldier's point of view is to recount the terrible. It is beautiful also because it is true-true to humanity and human pature, unswerving, unbiased, unemotional, honest and sympathetic. It aims to plead no cause, to point no moral. But it does both, And it is beautiful because it is beautifully written.

On just runtified.

# Two Days in Venice

By Paul U. Kellogg

HOSE who know and love the lagoons tell us that in the old days of Venice, no pile was driven without a chaunt, sung by the drivers as they hauled at the it fell. The chaunts were a curious mixture of sentiment, of bits of local color, of scraps of history, sacred and secular, reaching back to the conflicts with Greek and Turk—and of the work in hand. Venice is built on such piles, driven into the clay hide that has borne her for a thousand years above unfathomed depths of watery quicksand.

I find that my impressions of two days spent in Venice in mid-November, with the guns of her eighteenth-century overlords sounding scarcely twelve miles away at the mouth of the Piave are a mixture very much like one of these old chaunts. And indeed our work in hand was to help drive some shafts of succor into the uncertainties that surrounded a large rem-

nant of her civilian population.

We had been assigned by the Red Cross commissioner for Europe to make a quick survey of the needs of refugees throughout Italy. The great asili at Florence were still filled with thousands of them, sleeping on the floors, with scant coverings and often with little between them and the stones, Train-loads of contadini were still making their slow way down the Adriatic coast line to southern Italy, men, women and children crowded so close into the freight cars that many had to stand. And there was every prospect that the first wave of fugitives was about to be followed by a second and greater Rumor had it in Rome that the army headquarters were falling back to a new line as they had fallen back from the Tagliamento a few days before, and that it would be only a matter of hours when Venice would be in the hands of the Austrians or under siege. Events, galvanized by the spirited resistance of the Italian armies along the Piave, proved these forecasts mistaken; but without them in mind, you would not get the feel of the situation, as we felt it when we crossed the agoon and through the car windows saw the domes and towers of the city before us; and when, a little later, an old anziero helping us with his hooked pole we clambered into

We had made the night trip down from Rome in an ordinary compartment, filling up the space between the seats with

suitcases and getting such sleep as we could in our overcoats. I was accompanying the two American social workers who had set the standards for emergency relief at San Francisco and in the Ohio floods, one now chief of American Red Cross work for refugees in France, the other the organizer of Red Cross help for the Belgian refugees in Holland in 1914 and now Red Cross commissioner to Belgium. With us was a lieutenant of the Bersaglieri, assigned to us as laison and interpreter by the Italian war department. And not least, my old leather brief-case, which has carried many SURVEY manuscripts home for night reading, but which now bulged as never before with 300,000 lire, mostly in notes of from five to fifty lire. For in this emergency, traffic lines congested with troops and military material, and the Venetian banks closed, more bulky supplies were out of the question and drafts or even large bills were useless

In Rome we had been in conference with the Red Cross executives from France (who were serving as an emergency commission), the American ambassador, Americans in residence and members of the ministry. With the representative of the Associated Press we had called on Luigi Luzzatti. former premier and member of Parliament from Venezia. who had just been appointed high commissioner for profughi (Italian for refugees) and was charged with developing a permanent plan of government assistance. We found him in his apartments and passed through rooms stacked with papers and official-looking documents, and our first thought was that these were themselves treasure trove from Venice. But it turned out that this was the customary environment of their master, whom we came upon, like some antiquary in the midst of his collections, standing in a further and larger room. Here were tables, desks, cabinets, heaped two feet high with such litter, shelves lined with paper-covered books, books stacked in front of the shelves and wedged in on top of other books in defiance of all librarians.

And the man before us looked nothing less than some old doge of Venice, stepped out of the Middle Ages. His hair was white and long over his collar; heavy black eyebrows contrasted with white beard; he wore a skull cap, and a muffler hung down from his neck like a stole. Unhappy man, he said, that in his age it should fall to his lot to be charged with the evacuation of his native district. But with that, he

THE BRIDGE OF SIGHS

fired to his task, and talked brilliantly of the war, of statesmanship, of America's part in arms and in civilian aid. Of the refugees he said: "To give all labor and not all alms is my problem." And in his quick mind and vehement speech we could gather why, however much of the actual task of administering a comprehensive system of care for the refugees might fall to his younger associates, this venerable senator and member of ministries from the stricken district had been chosen as embodying in the public imagination the care and provision which the government had set itself to give. And in a sense he stood for another force in modern Italian life, of which Americans are, for the most part, unconscious, For -such have been the tremendous mutations of the centuriesthis guardian of fugitives from the city of Antonio and Shylock, is, like the Italian minister of foreign affairs and many another high in public life, a Jew.

### A Refuge from Attila's Huns

We were to visit many cities in the course of our rapid tour, but Venice stands out among the rest. Throughout our stay there, we had a sense of things impending. It was like Luzzatt's room, piled high with its records of fifty years of Italian national life, but with no script to tell what the next month or day might hold. It was beyond our powers to read, as Ruskin did, the history of her people written generation after generation in carved and ordered stones; but there was a poignancy which no one could escape in moving down silent canals beside shuttered buildings, a sense of frailness in this beauty built in yesteryears, fallen on a time of steel and high explosives. Venice had her beginnings in a flight of refugees before the invasion of the Huns in the days of Attila. Was she to end as she began?

The chronicler of the life of the lagoons has pointed out that in the flight of the early settlers to the lidi, the long ridges of sand that rim the sea, they learned the peril of the mainland: and that at the outset of the ninth century, when they held the Franks at bay. Pipin's fleet "defied by the impenetrable network of small canals and oozy mudbanks," they learned in turn the peril of the sea. So here, midway of the lagoons, on the islands of the archipelago, they forthwith sunk their communal feuds, drove their piles, and founded a city of which the world has no equal. But what of the peril of the sky? There is a legend that one of the churches of Venice is built in the place above which, as foretold by a heavenly visitant to Bishop Magnus of Altinum, he should see a red cloud rest; and another, where a white cloud should stand: but there have been no legends or heavenly visitants to forecast the black cloud of war which, after ten centuries. should come with its altogether new peril of the air for church and citizens alike.

Venice suffered from bombardment in the fifteen months' siege by the Austrians which snuffed out her revolution in 1848, but that was before the age of air craft. The church of the Scalzi, damaged then and restored in 1860, was bombed in 1916, and the large fresco by Tiepolo shattered, ceiling of Santa Maria Formosa was destroyed the same year. and in 1917 a bomb brought down that of the church of SS. Giovanni e Paolo. In the adjoining fifteenth century Scuola di S. Marco, which has been used as an ospedale civile since the time of the Napoleonic wars, four people were killed, nineteen others wounded and half of the magnificent carved wooden ceiling, with the Lion of St, Mark done in its different panels, was destroyed. A bomb hit the angel on the dome of San Pietro di Castello, the island church which was for three hundred and fifty years the seat of the patriarchate. Altogether, according to the American consul at Venice, the city had suffered from thirty air raids since the beginning of the war, twenty-four people were killed in one night, and four bombs had fallen anywhere from nine feet to a hundred yards of St. Mark's, eight to ten more bombs within an additional hundred yards. The Church of the Scalzi is next the railway station, that of S. Pietro near the arsenal. and Venice has been a naval base, which made these fair military targets. Only concerted or sporadic attempts at terrorism could, in the judgment of local observers, account for others of the raids, and only self-restraint from such a policy can account for the complete freedom of the city from harm this fall, much less keep it so, once the enemy's great guns are brought up on the lower Piave.

Of the outlook in mid-November, there were as many notions as men you met—that the churches had been attacked in order to prompt the Pope to press for peace, and hence bombing would be repeated; that it had been stopped by his intercession and hence would not be repeated; that the Austrians in a spirit of vengeance would raze the city; that their plan was to take it and then threaten to leave no stone upon another if Italy did not make peace; that, rather than see it fall into Austrian hands, a certain fervid poet had proposed

that Venice be evacuated by the Italians and burned by them, and so on. The more reasonable hypothesis seemed to be that, from the standpoint of the land campaign, there was no military importance to the city as such. Its impregnability by land or sea was of other centuries, before hydroplanes and long-range guns. The modern line of struggle reached up the Piave river valley, from the coast to the mountains, and if the line broke in the upper reaches it must fall back to the next river valley, and Venice be left behind like so much farm land. On the other hand, from the standpoint of the sea campaign, the port of Venice is of great importance on the Adriatic. Without it, the Italians would have no adequate naval base in its upper waters. The question, therefore, might become one of whether, as a naval base, it could be held even if the line broke, and whether, as such, its importance warranted holding it even if that meant the ruin of the city. In other words, Venice as a city and art treasure would neither be wilfully hazarded by the Italians nor wilfully demolished by the Austrians, a judgment which, clearly, any day's developments might overthrow, but which those of November and December seemed to sustain, her Campanile, her domes and roofs standing unscathed while the fighting went on from the coast to the mountains, and such military centers as Padua were bombed.

### Like a City in a Test Tube

BUT OUR concern was with civilian needs rather than with military operations and, as will appear, the further evacuation of Venice was being considered quite independent of the latter. The considerations were economic-food, fuel, work The town was like a watch which has stopped. Not the frailness of its ancient architecture, but the helplessness of the modern city, once its artificial life is thrown out of gear, was what was to bear in upon us at every hand. Unlike your chemist, it is not given to economist or sociologist to isolate his subject-matter and experiment on a large scale. He cannot put a community in a test tube and watch what happens while he does this or that. He must wait upon events. And a student of civics would have had here, had he the time or heart to explore it, the phenomena of an urban center, torn loose from those underpinnings of sustenance and exchange of services which support the industrial city in the

"THE FRAILNESS OF ITS ANCIENT ARCHITECTURE

TOWER OF ST. STEFANO

nation, the industrial state in the world of raw material. The piles had been ripped out from beneath the livelihood of Venice, laying bare how every part of the commonwealth is rooted in the whole.

There was another, a more immediate and practical reason, which set off Venice among the cities of our tour. It offered the American Red Cross the opportunity to help engineer an organized evacuation-the very reverse of what had happened in the pell-mell retreat from the Italian war zone. And the reverse of the French and Belgian experience also, for it offered opportunity to get in at the start, and to help move the people by natural, work-a-day groups, kept intact from the threatened city to their place of refuge. This opportunity had been seized for the American Red Cross by the American consul, B. Harvey Carroll, a Texas newspaper editor of imagination and redoubtable energy. Early in November the Red Cross headquarters in Rome had dispatched him 65,000 lire, and he had drawn on it to help refugees reaching Venice from the invaded districts to the north: to keep going, under the American flag, a posto di conforto at Mestre, a junction point on the mainland, which had reached the last day of its resources and through which refugees and exhausted and wounded soldiers were passing in a stream; to open an American Red Cross comfort station at Chioggia, where the Venetian refugees were boarding the trains; and, more especially, through three gifts of ten thousand lire each, to "assist in transplanting the organized work of institutions which in the many months of war had provided employment for the unemployed and had turned what would have been a dead weight of charity into a self-sustaining producing force." The first of these colonies consisted of the working girls of the Laboratorio per i Disoccupati, and was headed by Signora Marie Pezze Pascolato. The others had been units of the Comitato Cittadino di Assistenze e di Difesa Civile. "In short." as Mr. Carroll expressed it in his graphic way, "they were brigades of workers of both sexes. mobilized and transported to form a new nucleus of Venice. Those sent away under this plan go out not like chaff driven by the wind, but like bees swarming from a hive to make a new hive."

ON THE GRAND CANAL

The night of our arrival, in the empty billiard room of Hotel Danielli, we talked till midnight with the consul. He told us of the retreat and the situation at the front; he had the week before visited General Pepino Garibaldi, who, with the old Alpine brigade of his grandfather, had brought their guns down from the heights of the Dolomites to the elbow of the Piave (Mr. Carroll is himself an honorary member of the brigade). And he told of the work for refugees; he was back only that afternoon from Chioggia, inspecting the Red Cross canteen. There an old palace had been turned over by the authorities, who had furnished two military cooks, a ton of coal, a telephone and other conveniences. With Red Cross funds he had gotten together supplies and manned the canteen with his two consulate assistants. At first they had had to buy piecemeal, ten loaves of bread here, ten there, and canned things. But the market was easier in Venice, because so many people had gone; he had secured authorization to buy wholesale and now wanted to organize buying for storage for any emergency and for use in the further evacuation. The canteen had been able to provide meals at a cost of one lire per person-less than fifteen cents. It provided hot coffee to the grown people and hot milk for the babies; hot soup, bread and meat or bread and cheese, with a few special delicacies for invalids,

If you will turn to the map of northern Italy, you will see that Chioggia is situated at the point of mainland at the southern end of the thin islands that shut in the lagoons. A branch railroad connects it with the trunk lines running south through Ferrara to the seacoast region from Ravenna to Ancona, with Rimini in the center. This region, because of its unoccupied summer cottages, hotels and villas, had been designated as the destination of the dislodged Venetians. With the main railroad out of Venice to Padua engrossed by military use, they were taken, a thousand at a time, by ferry to Chioggia, where trains were ready for them. At first each carried his own luggage, but this led to confusion and was very burdensome, as the landing was about a mile from the station. Now each family was given a bag to put goods in. and these were carted from the boat to the cars, There they were turned over to the owners, who looked after them on the long trip, for so congested was the travel that sometimes two or four days were spent in getting down the coast. In this way, 8,000 people had been transported in the last ten days, and the American Red Cross canteen had fed as many as two thousand in twenty-four hours and provided food for them en route. But the stream had been held up temporarily because of lack of food supplies and shelter at the other end: and in the interval there was opportunity for a concerted program of orderly migration to be worked out by all the agencies concerned-the admiralty, the provincial and municipal authorities, the Comitato Civile and the Red Cross. During the next day we visited these various agencies, and the upshot was that we left with Consul Carroll the sum of 200,000 lire for supplies and assistance to the migrating Venetian groups, and to meet again the following week in Rimini, where a cooperative arrangement was entered upon by which the Red Cross instituted a hospital and health center to serve the twenty thousand refugees spread along the coast,

### Air-Craft Over the Canals

THE impressions of that day in Venice stand out as a series of pictures. First was the view from our window in the morning, with a bright sun taking the edge off the damp and cold of the hotel room. I had been disappointed the afternoon before in my glimpse of St. Mark's Place. With the domes of the church blackened, its entrance sheathed with sandbags, the red bricks of the new Campanile standing out as uncompromisingly as those of a factory chimney, and the pavements stripped of the color and motion of eager crowds, the piazza had shrunk to the dimensions and quality of an American seaside resort in winter time. It had seemed somehow second-hand and pinched up. But here in the domes and chanels of the island church of San Giorgio Maggiore, directly before me across the water, was the enchanted city of my anticipation. There was the drone of a motor overhead. The Festa del Redentore has not been kept up since the war, but the sober patrol of the air-men has been broken by at least one regatta of the sky, when, we were told, in gala spirit they had swooped down across the surface of the lagoons and past the Campanile like gulls. In mists far to the left I could make out the outline of three or four torpedo boat destroyers. Three barges, the boatmen bending their backs to their long sweeps, were in the middle distance, and near at hand a launch tied up to the steps, a sailor jumped out and saluted and an officer followed. There were knots of people along the quay and, as we left the hotel, gondoliers called to us from the waterside. One lone guide, fallen on lean days, dogged us with the tempting offer to take us to the last glass factory on its last day in Venice!

Then comes to mind a tiny upstairs room with red upholstery, looking out on a narrow medieval street; this, in the half-closed bank which had taken our brief-case of wealth over night on the distinct understanding that it would not be responsible in case of invasion. Its own books and moneys had been transferred to Milan. And here, beside a window looking out on a narrow street, like as two peas to those of the Rialtos of the stage, we spent two interminable hours counting out, not ducats, for precious metal is searce, but wartime notes of small denominations, to be wrapped up in a big brown paper parcel for the consul.

### A Revolutionary General in Command

NEXT we went, by many turnings, past closed shops and along calli with but few passersby, to the Teatro la Fenice, where the Comitato Civile had its headquarters. Wooden partitions had been crected to divide off offices in the fover. and here the people came for the tickets that would get them transportation, or food if they were to remain. We passed through a knot of black-shawled women clogging the little alleyway, and a guard of soldiers were drawn up in the open space at the entrance. Women, old men and children were waiting their turn on the stairs or in the corridors. The head of this committee (one of the first of kindred societies organized throughout Italy earlier in the war to care for soldiers' families, and now recognized as semi-official bodies) is General Costello, a man of 84, a veteran of the Venetian revolution of '48 and '49, of the Crimean War of '55 and of the wars for national unity in the later sixties. Him we did not see, but we met the secretary, Dr. Andrea Venuti, a young man; and also the active head of the committee, Professor Marione, living double of Charles Sprague Smith, so long the director of the People's Institute in New York. Professor Marione occupies the chair of international law at the University of Padua, and at the outbreak of the war he and his wife had come back to the native city, not, as Portia, to give it law, but to give it service. Mrs. Marione has been the active forewoman and manager of the garment workrooms. They are typical of the Italian men and women, not only on this committee but throughout Italy, and not only of the well-to-do, but of the working people and professional groups, who have thrown themselves into all manner of social work.

The first work of the committee was for soldiers' families. but it soon broadened out along many lines. It helped float the loan in Venice with one hand and carried on a sanitary campaign with the other. Not the least interesting trophy I brought away with me was its little pamphlet, gotten out like an educational leaflet in a street-cleaning campaign such as those for which Colonel Waring set the fashion with us. Only this had to do with the littering up of canals! More especially the committee had broadened its work to include help to all families in poverty because of the war. With tourists no longer coming to the city and with the Adriatic closed to fishers, it had raised something like 3,000,000 lire from voluntary contributions to carry on general civilian relief and provide work. The well-to-do people of Venice are not industrialists who make their money, but people who inherit from old families. These had decreased rents and otherwise helped out during the war poverty, but with this class largely gone, little was coming in now to tide the committee over their great emergency. It was maintaining ten popular kitchens. Eight days before it had been giving fifty thousand rations; today, so swift had come the need, it had given

LIBRARY OF ST. MARK'S

twenty; and altogether, through free distributions and economic sales, it was providing for 15,000 families, or 60,000 people.

So it had come about, in the present emergency, that the committee had broadened its work once more and taken up the responsibility of functioning in connection with the evacuation of the city. It was doing so because of this food pressure, because it had close contacts with the people and because it was concerned in holding together the working units through which, for two years past, it had enabled so many families to maintain their economic independence by working on uniforms, socks and underclothes for the troops. Its needle trades had grown to the point where twenty-five tailors cut the garments for the 600 workers in its rooms. and for the 3,000 women who sewed at home. It had started work in wood, for old men and invalided soldiers, such as the manufacture of wheel-barrows and munition cases, and work in blacksmithing and tool-making. The seacoast localities to which the Venetian refugees were bound were not of its choosing, for they seemed to offer little opportunity for earning a living, and the government had no plans for employment there; but the committee felt that its system of workrooms could be expanded to care for much larger numbers and proposed not only to ship its equipment south, but to follow its people and open headquarters at Rimini. And there we were to find them, a week later, a dozen in all, men and women, round the broad table of a deserted hotel, wrestling far into the night with personal and practical problems much after the kind, I fancy, that the Pilgrim fathers faced in their day in planting their shiploads of settlers on the New England coast.

# Labor Laws in the Crucible

# Measure's Necessary for Effectiveness During and After the War

# By John B. Andrews

SECRETARY AMERICAN ASSOCIATION FOR LANOR LEGISLATION

ERHAPS no prediction regarding the outcome of the world war has been more uniformly accepted than that when this war is over the masses of the people are to occupy a much more favorable position. To a large part of the world today democracy is the avowed purpose for which the lifeblood of millions is being poured out.

In this great war labor has, of course, furnished the vast majority of the fighters. And as modern military operations have become more and more dependent upon industry, the industrial army has become as vital a factor in national effectiveness as are the fighting forces. The workers in the industries are the second line of defense.

As our belated war preparations drag out their weary months, as emergency shipyards yawn from the marshes, and as coal cars stand congested while supply boats wait for fuel in the harbors, we know that our biggest problem—not only after the war is over, but in winning this war—is the labor problem.

We may profitably consider, therefore, the means by which labor is to become available and effective during the progress of the war, and at the same time discuss the measures by which labor ultimately is to receive its democratic reward for innumerable searrifices both at home and abroad. Constructive effort, not merely after the war but as a result of the war and while the war is in progress, is the important consideration.

We may rest assured that widespread and lasting improvement in labor's condition will come in two forms, first by means of collective bargaining through trade union action, and, second, by the more comprehensive method of legal enactment, including a train of executive and administrative orders.

### Organized Labor Stronger

OTHERS will deal sufficiently with progress toward industrial democracy through trade unionism. No one familiar with the traditions and the leadership of the American Federation of Labor will doubt that trade unionism will be pushed forward by the war. Doubtless there will come more democratic shop management, the extension of collective bargaining and the adjustment by discussion of many of the conditions of employment, especially for the organized workers. Even though faced with peculiar difficulties, including the absorption of an army of invading women and a host of unskilled diluting mechanics, organized labor was never in a more advantageous position to assert its wishes and to have its policies adopted. And Mr. Gompers, the very able head of the organized labor movement in America, said recently in a patriotic New Year's appeal to his membership of more than two million: "The time for labor to interpose its needs and contentions is while policies are in the making."

But the greatest sufferers in this war and afterward will be the masses of unorganized men and women who will only indirectly profit from the better bargains of trade unionism.

1 From a paper read before the National Institute of Social Sciences, January 18, 1918, which will be printed with additional material in the Journal of the institute.

For this vastly larger and comparatively helpless group, the concern of public-spirited citizens interested in the general welfare must be in that form of protection which is to come not directly through the collective bargaining of the labor unions, but through the democratic expression of public opinion in our legislative halls. Political democracy, won by our forefathers and emphasized in later extension of suffrage to working men and more recently to women, is the present hope of millions of our industrial workers.

Even organized labor's "interposition" may soon take on a political form. Organized labor of our Civil War period, upon finding trade unionism unable to prevent a reduction of wages when war-priced prosperity slumped at the close of that four-year conflict, turned to politics and labor legislation. A somewhat similar political activity may now be foreshadowed by the recent change, from after-election November to the spring, of the annual convention date of the American Federation of Labor. Meanwhile for England, John Massefield, the official historian of the British army in France, writes: "I predict that our next Parliament will be a Labor Parliament."

Fortunately, the war has placed labor legislation upon a new footing before the country. Men in high places have suddenly recognized that labor laws are not based upon mere sentiment but upon sound economics. They have joined the swelling chorus in demanding that protective standards be maintained in order that output be not decreased.

Unfortunately, our existing labor legislation is very incomplete. Consider for a noment England's relative position in reference to workmen's insurance legislation. She had a system of workmen's compensation for accidents, covering the earlier country, and in the midst of war she has increased the cash benefits to injured workmen and their families 25 per cent. She had likewise a system of old age pensions, of invalidity insurance, of health and maternity insurance and insurance against unemployment. As a result of her experience, every proposal for change has been in the direction of greater liberality to the workers.

From England can be drawn an example of preparedness. While her was offensive is at its height, she has inaugurated a series of definite plans for bridging over the period of transition from war to peace. A Ministry of Reconstruction has been formed, whose head is a member of the Cabinet and whose duty is to investigate, plan and to make recommendations regarding problems growing out of the war.

Prominent among the ministry's projects are those for demobilization. It has planned the mustering out of the army according to industrial demands. The men who have positions waiting for them are to be the first dismissed, and the others will be released mainly as openings for them are found. The peace-time occupations of the entire army have been catalogued for use in this connection. Whereas in the United States the selective draft act is to go out of effect within four months after the proclamation of peace, England expects to spend two or three years in disbanding her three million soldiers. The dismissal of munition workers is also to be under organized control, only a few from any one trade being released at a time. As a guide in finding work for munition makers and soldiers, the Ministry of Reconstruction is canvassing the country, the colonies and abroad, to learn what trade demands will be at the end of the war. Plans are being made to turn war materials and equipment into peace-time uses; motor trucks which have carried ammunition will haul farm products; factories which have made shells will make tools.

Furthermore, when the British army is dismissed, funda and plans for public work will be ready. The Development Commission and the Road Board will be able to begin road-making, afforestation and land improvement. The state is preparing to help cities and towns build 150,000 to 200,000 workmen's dwellings. Another government committee is working out plans for land settlement by soldiers and salions. Already the committee has asked for money for the first cooperative colony of small farms.

Finally, even if plans for work at the end of the war fail to provide for everyone, the English government is still praperd. For a year after they leave the service, the soldiers will be protected by unemployment insurance. Most of the war workers will also be covered.

In the midst of war England has extended the scope of the unemployment insurance about 50 per cent. As an important factor in the administration of this insurance England had developed before the war a national system of 400 public employment bureaus and now plans to increase the number to 2,000 before the end of the war. This will be about twenty times the present number in this country, although we have twice England's population and twenty-five times the area.

It is scarcely possible to do more than suggest a few of our own shortcomings. But surely it will be agreed that in this field we have most of our work before us. Ours is a work of construction.

For emergency war labor administration, our federal Department of Labor announced in early January a program that is full of promise. If carried out efficiently and promptly this program will justify the confidence of those who believe that unified authority should be placed in this department of the government and that also concentrated there should be unescapable responsibility.

Surely it will be recognized that far-reaching changes in the management of industry are to be expected and plans of the utmost consequence are to be worked out and put into operation after the war. As practical people, however, we must also consider what are the well thought out steps which we are best prepared to take now.

### The First Need-Regular Work

WHAT then, in the field of labor legislation, is especially needed and feasible in America at this moment?

Fundamental, of course, is regular employment. The usual maladjustments of workers seeking individually for jobs and employers searching unsystematically for meu—must now be avoided. War has made the immediate adoption of a unified system of labor placement—machinery for intelligent and effective distribution of labor—a matter of national self-preservation. The labor market must be organized through a complete network of public employment bureaus. Such a service—long urged by social workers—organized labor now recognizes is not only an "invaluable adjunct to our war machinery," but is "keenly needed in the transition period that will follow the declaration of peace and the work of demobiliza-

tion." Here is a vitally necessary means for labor reconstruction as the soldiers and sailors return to industry after the war, a means which is also imperatively needed now in successfully prosecuting the war.

Fortunately the President, through the extraordinary powers entrusted to him for the period of the war, has recently ordered the development of a United States employment service on a war basis. The danger is that the war emergency may be allowed to pass into history without putting the employment service on an adequate permanent basis.

### Workmen's Compensation, Health Insurance

A SECOND means of labor construction is the extension of workmen's compensation. This legislation, at first greeted with suspicion, has within a half dozen years spread over most of the industrial states. Many inadequate laws are yet to be improved, but acceptance of the workmen's compensation principle is now almost universal. The recognition of its value may be illustrated by our experience last year with longshoremen. The United States Supreme Court, in a divided opinion, held that men loading and unloading vessels could not when injured seek compensation under the state laws. But such relief had come to be generally regarded as social justice. Longshore work is particularly hazardous. Thousands of such men are seriously injured each year. These "marine" workmen. through the necessary shipment of supplies to our allies and to our own men in France, had become in a very clear sense indispensable in this war. Thousands of them were already protesting against grievances of long duration. Here was a new grievance, the loss of compensation when injured. A bill to grant such relief was drafted by the Association for Labor Legislation, and within eleven days it was passed through both houses of Congress and signed by the President. This legal protection was necessary in order to render justice in time of peace. The progress of the war lifted it into commanding importance.

A third measure of labor construction which the war has made vitally imperative is the early development of work-men's health insurance. Hundreds of thousands of war workers are about to enter strange employments. Whether in the manufacture of munitions or elsewhere, they will be subjected to dangers with which they are not familiar. A large number of these new workers will be women, peculiarly susceptible to occupational poisons, and with maternity functions to be carefully considered with a view to safeguarding their present health as well as that of the coming generations.

The official commission which has been studying this question in New Jersey states: "The stress of industry in war is making increasing demands upon physical endurance. In our hour of necessity we have been shocked by the high percentage of draft rejections on account of physical disability. As never before we need now to conserve, for present and future generations, the health and physical vigor of our people. The thermore, it is the duty of statesmanship to look beyond our immediate pressing needs to the period of reconstruction at the close of the war. We cannot afford to disregard the protective legislative inducements already offered to workmen by our keenest commercial competitors in Europe."

In line with the definite stand by organized labor in California and New Jersey the New York State Federation of Labor, on February 6, unanimously endorsed a bill for compulsory contributory health insurance and directed its committee to work for its early enactment.

The economic advantage to a nation of a healthy, efficient and contented working class, is recognized by employers who have observed the effects of universal insurance against sickness in Germany. A former representative of large manufacturing interests who is now serving in the War Department, wrote to me recently as follows:

"I believe very strongly that unless we make very substantial progress along the line of health insurance . . . we shall find ourselves under very serious handicaps in world competition at the conclusion of the present war. I believe that many of our people are still going cheerfully on with the social ideals and ideas of the past generation quite oblivious to the fact that our great commercial competitors, Germany and Great Britain, have advanced far beyond us in social thinking. The time will come within the years immediately following the war when our 'go as you please' methods of industry will be weighed in the balance in competition with Europe.'

Shortly after we entered this war the United States government provided a most liberal system of accident, health and life insurance for its enlisted men. In support of this wise action it was frequently said by officials in Washington that men were better fighters if relieved of anxiety regarding their future. "The individual states," declares the New Jersey commission, "should be no less considerate of their army of industrial workers."

We are fighting a great world war in order that the condition of the people may be improved. Some time this war will end. But within each nation there is a never-ending struggle for better living conditions, for opportunities for health and happiness that during generations have been denied to the workers. Today, for example, we possess a mighty power to fight disease. To the wealthy class this scientific knowledge is available; to the poverty-stricken it is doled out in charity dispensaries. But for the masses of the working populationin the United States alone among great industrial nationssuch treatment is not made available. Through a properly organized system of universal health insurance it would be possible to bring the world of medical science to the aid of the humblest wage-earner.

For these three important measures-public employment service, extension of accident compensation, and the adoption of workmen's health insurance-there has already been ample preparation and agreement in time of peace. While earnestly sifting new proposals for the after-war reconstruction period, no time should be lost in putting these three welltested measures into operation.

It is now a matter of peculiarly vital importance to the nation that this country catch up with the constructive labor legislation long since adopted in other countries. Perhaps conservative citizens may comfort themselves with the reflection that short-sighted repression is followed by changes far more radical than would have been brought about had opponents of progress been more wise and just. Certainly the exgencies of international competition for labor and the imperative necessity of conserving our human resources, should indicate the wisdom of taking these practical steps without

During war we must give additional attention to home conditions. It is by anticipating internal problems that nations in a mighty world conflict can insure themselves against disaster. In the midst of a great international upheaval let us not be guilty of saying that the purposes are commendable but that "the time is not ripe for a change." In labor legislation the war has not furnished a ground for postponement of action; rather it has increased the need for action. And in fulfilling this immediate and urgent duty to aid in the successful prosecution of the war we shall at the same time be laving a firm basis for reconstruction after the

The future of our government depends upon the loyalty and cooperation of labor. In time of peace we have as a nation been sadly neglectful; we have been especially remiss in our lack of social concern for unorganized labor's welfare: now, if we understand and if we are sincere, we must in time of war prepare both for war and for peace.

### Japanese Railway Welfare Work

By Shunsaku Noda

ASSISTANT TO GENERAL TRAFFIC AND INDUSTRIAL MANAGER SOUTH MANCHURIA RAILWAY COMPANY

HE activities of the welfare work in Manchuria are the outgrowth of negotiations between the Japanese Young Men's Christian Association and Baron Goto, the former president of our company in 1906, shortly after the organization of the railway corporation. The welfare department is now headed by Shiroshi Otsuka, formerly connected with the Y. M. C. A., who under the president's supervision has sole control of its work.

Our railroad runs through the middle section of Manchuria from south to north, and, besides carrying on the railway, shipping, mining and other related industries, our company dominates the leased territory along the entire railroad line. That is to say, it controls the educational system, sanitation, waterworks, sewage, and other public utilities in the territory. There are living in the leased territory under our supervision about 50,000 Japanese and 100,000 Chinese and as many as 500 foreigners, while the company itself employs 12,000 Japanese and 25,000 Chinese.

The welfare department seeks to promote the moral and social advancement both of Japanese and Chinese employes, as well as of all other people in the leased territory, and it is hoped that this condition may prevail and extend to all outlying districts, thus benefiting hundreds of thousands of the Chinese, and making for a deeper appreciation of the

advantages to be gained from the higher civilization. In the welfare department there are twelve officers, all under the supervision of Mr. Otsuka, and all are conscientious, earnest Christians. These officers have charge of the work in the various towns along the railway, and each office is known as a club where all the employes may meet. By means of lectures, reading meetings, religious services, healthy games, musical concerts, gardening, knitting, with annual exhibits and prizes, the company seeks to promote the social, physical and intellectual welfare of the employes and their families. These clubs have also circulating libraries, which are drawn upon largely by the families of the lower class employes.

Home educational assemblies for women and children are also a feature of the welfare work, the women being taught cooking, sewing, knitting and the training of children, while playing parties are provided for the children.

Moreover the welfare department gives special attention to personal consultation on individual affairs-consoling and

encouraging-this office being its highest endeavor.

The railway company has sent the head of the department. Mr. Otsuka, to the United States where he is now fulfilling his instructions to inspect and study similar social work among the American people with a view to enabling the company to improve its methods and expand its work,

# A Report on Industrial Unrest

# Summary of Findings of President's Commission

By John A. Fitch

OF THE SURVEY STAFF

LEAR away the profiteers if you want to get the utmost out of labor for the period of the war. Let's have done with injustice and repression. Let the employer deal honestly and justly with his employes by permitting the establishment of machinery for negotiation. Let's remove suspicion from the minds of the workers by giving them a voice in the conditions of their employment, and by giving them a square deal in the shop and before the law. Let's have patriotism and sacrifice on both sides of the industrial fence.

This, in substance represents the spirit of the report and the recommendations of the President's Mediation Commission, issued this week, as the result of the commission's extended trip throughout the country in search of the causes of industrial unrest.

"Labor at heart," says the report, "is as devoted to the purposes of the government in the prosecution of this war as any other part of society." If it has been "less vocal" and its feelings sometimes "tepid" the explanation is to be found in the treatment that has been accorded to it. For, says the report:

Too often there is a glaring inconsistency between our democratic purposes in this war abroad and the autocratic conduct of some of those guiding industry at home. This inconsistency is emphasized by such episodes as the Bisbee deportations.

Personal bitterness and more intense industrial strife inevitably result when the claim of lovalty is falsely resorted to by employers and their sympathizers as a means of defeating sincere claims for social justice, even though such claims be asserted in time of war. So long as profiteering is not comprehensively prevented to the full extent that governmental action can prevent it, just so long will a sense of inequality disturb the fullest devotion of labor's contribution to the war.

The commission, which was appointed by President Wilson particularly to investigate the deportations at Bisbee, Ariz., last July, consists of William B. Wilson, secretary of labor, chairman; E. P. Marsh of the state of Washington; Verner Z. Reed of Colorado; J. L. Spangler of Pennsylvania; John H. Walker of Illinois and Felix Frankfurter of the Harvard Law School, secretary and counsel. Of the members of the commission, Verner Z. Reed and J. L. Spangler are capitalists and employers; E. P. Marsh and John H. Walker are trade unionists and each is president of the State Federation of Labor in his own state.

The commission inquired particularly into labor controversies in the copper mines, in the oil fields, in the lumber industry and the telephone lines of the Pacific Northwest and in the packing industry. In addition it made inquiry at San Francisco into the Mooney case. Reports have previously been made on the Bisbee deportations (see the Survey for December 8, 1917) and on the Mooney case (see the SURVEY for February 2). In this more extended report the commission draws some general conclusions on the nature and causes

First of all, the recent manifestations of unrest are due to specific evils; they cannot be accounted for on the basis of mere "agitation" nor can they be ascribed to the sinister influence of enemy propaganda. The belief that all wars are "capitalistic" prevailed among the copper miners and this belief was "encouraged by the heavy profits of the copper companies resulting from the European war before our entrance into it." There were many other complicating features, including "the absence of processes of orderly government in industry."

"These conditions," says the report, "may not have been left unavailed of by enemies of our war policy nor by exponents of syndicalist industrialism, but neither sinister influences nor the I. W. W. can account for these strikes. The explanation is to be found in unremedied and remediable industrial disorders." And this is an explanation that applied far more widely than to the copper strikes. "It is," the commissioners tell us, further on, "to uncorrected specific evils and the absence of a healthy spirit between capital and labor, due partly to these evils and partly to an unsound industrial structure, that we must attribute industrial difficulties which we have experienced during the war. Sinister influences and extremist doctrine may have availed themselves of these conditions; they certainly have not created them."

What are some of these evils? One upon which the commission lays much stress is absentee capitalism. At the copper mines, for example:

Distant ownership, wholly apart from its tendency to divorce in-come from the responsibility for the conditions under which it is acquired, creates barriers against the opportunity of understanding the labor aspects, the human problems, of the industry, and solidarity of interest among the various owners checks the views of any one liberal owner from prevailing against the autocratic policy of the majority. The resident management of the mines is wholly tra-ditional in its effect, however sincere in its purpose. The managers ditional in its effect, however sincere in its purpose. The managers fail to understand and reach the mind and heart of labor because they have not the aptitude or the training or the time for wise deal-ing with the problems of industrial relationship. The managers are technical me, mining engineers of knowledge and skill. There is no responsible executive whose sole function it is to deal with labor problems. In fact, it has hardly begun to be realized that labor questions call for the same systematic attention and understanding and skill as do engineering problems.

Of greater immediate importance is the absence of any machinery for negotiation and the denial by the employer of the right of the workers to a voice in the industry. In the copper mines, "while not expressed in so many words, the dominant feeling of protest was that the industry was conducted upon an autocratic basis. The workers did not have representation in determining those conditions of their employment which vitally affected their lives as well as the company's output. Many complaints were, in fact, found by the commission to be unfounded, but there was no safeguard against injustice except the say-so of one side to the controversy. In none of the mines was there direct dealing between companies and unions. In some mines grievance committees had been recently established, but they were distrusted by the workers as subject to company control, and, in any event, were not effective, because the final determination of every issue was left with the company. In place of orderly processes of adjustment workers were given the alternative of submission or strike."

A similar condition was found to prevail in the lumber industry, where a "dominant reason" for the hostility is found in "the bitter attitude of the operators toward any organization among their employes." In the packing industry the employers "refused to meet eye to eye with the union leaders;" incidentally an attitude which "deprived the packers of the opportunity of explaining away, if possible, the belief entertained by the men that the packers were profiteering."

A third outstanding evil was encountered in the lumber camps of the Northwest where "social conditions have been allowed to grow up full of danger to the community. It is in these unhealthy social conditions that we find the explanations for the unrest long gathering force but now shappy brought to our attention by its disastrous effect upon war industries. The unlivable condition of many of the camps has long demanded attention. While large improvements in camp life have recently been made, many of the camps still require much betterment to make them fit human habitations."

The refusal of the employers to confer with their employes has a psychological influence so important in the promotion of unrest that the commissioners name it as one of the chief evils to be done away. Another factor, psychological in its effect but none the less exercising great influence, is the "false fiesue of loyalty." In the Pacific coast telephone controversy the attempt of parties on one side of an economic controversy to appropriate patriotism and stigmatize the other side with disloyalty only served to intensify the bitterness of the struggle and to weaken the force of unity in the country."

It is just such a one-sided attitude, on the part of certain employers, arrogating to themselves all of the virtues and claiming such a monopoly on intelligence as to justify them in excluding the workers from all voice in the control of working conditions, that gives opportunity to and occasion for radical propaganda. In the lumber industry the uncompromising opposition of the employers to organization of any sort "has reaped for them an organization of destructive rather than constructive radicalism. The I. W. W. is filling the vacuum created by the operators. The red card is carried by large numbers throughout the Pacific Northwest, Membership in the I. W. W. by no means implies belief in or understanding of its philosophy. To a majority of the members it is a bond of groping fellowship. According to the estimates of conservative students of the phenomenon a very small percentage of the I. W. W. are really understanding followers of subversive doctrine. The I. W. W. is seeking results by dramatizing evils and by romantic promises of relief. The hold of the I. W. W. is riveted instead of weakened by unimaginative opposition on the part of employers to the correction of real grievances-an opposition based upon academic fear that granting just demands will lead to unjust demands."

In its final summing up of the deep-seated causes of innest, the commission says:

Broadly speaking, American industry Inche a healthy basis or relationship between management and men. At bostom this is due to the insistence by employers upon individual dealings with center. Direct dealings with employer's organizations is still the minority rule in the United States. In the majority of instances there is no joint dealings, and in too many instances employers are in active opposition to labor organizations. This failure to equalize the parties in adjustments of inevitable industrial contents is the central cause of our difficulties. There is a commendable spirit throughout the country to correct specific evils. The leaders in industry must of content of the country of the country of the content of the country of

Too many labor disturbances are due to the absence of disturbances to resort may be had for peaceful settlement. Force becomes to a ready an outlet. We need continuous administrative machinery by which girevances incretable in industry may be easily and quickly disposed of and not allowed to reach the pressure of explosion.

There is a widespread lack of knowledge on the part of capital as to labor's feelings and needs, and on the part of labor as to problems of management. This is due primarily to a lack of collective

negotiation as the normal process of industry. In addition there is but little realization on the part of industry that the so-called "labor problem" demands not only occasional attention but continuous and systematic responsibility, as much so as the technical or financial aspects of industry.

Certain specific grievances, when long uncorrected, not only mean detection specific grievances, when long uncorrected, not only mean detection and specific grieval specific gr

Repressive dealing with manifestations of labor uncrest is the source of much bitterness, unrea radical labor leaders into martyrs, and thus increases their following, and, worst of all, in the minds of workers tends to implicate the government as a parisian in an economic conflict. The problem is a delicate and difficult one. There Exercit incident, the Little hanging, and similar arts of violence against workers have had a very harmful effect upon labor both in the United States and in some of the allied countries. Such incidents are attempts to deal with symptoms rather than causes. The 1. W. W. has exercised its strongers hadd in those industries and coumanities where employers have most resided the trade-common nove-most control of the control of the problem of protest against unjust treatment was invervable.

After such a statement as this a program of action is to be expected. The first clear recommendation of the commission is "the elimination to the utmost practicable extent of all profiteering during the period of the war."

In line with the Whitley report, of the British Reconstruction Committee, the commission favored organization and collective bargaining. The Whitley committee expressed the opinion that "an essential condition of securing a permanent improvement in the relations between employers and employed is that there should be adequate organization on the part of both employers and work people." The report of the Presient's commission declares that it is "no longer possible to conduct industry by dealing with employes as individuals. Some form of collective relationship between management and men is indispensable. The recognition of this principle by the government should form an accepted part of the labor policy of the nation."

Other recommendations are as follows:

The establishment of "continuous administrative machinery for the orderly disposition of industrial issues."

The eight-hour day.
"Unified direction of the labor administration of the United States for the period of the war." [Steps in this direction have recently been taken.]

The surrender by the unions of "all practices which tend to restrict maximum efficiency" once they are assured of "sound labor couditions and effective means for the just redress of girevance."

Finally, "uncorrected evils are the greatest provocative to extremi propaganda, and their correction in itself would be the best counter-propaganda. But there is need for more affirmative education. There has been too little publicity of an educative sort in regard to labor's relation to the war. The purposes of the government and the methods by which it is pursuing them should be brought home to the fuller understanding of labor. Labor has most at stake in this war, and it will eagerly devote its all if only it be treated with confidence and understanding, subject neither to indulgence not neglect, but dealt with as a part of the citizenship of the state."

Thus ends a document of surpassing importance. It is the result of an inquiry much less extensive than that of the Industrial Relations Commission of three years ago, but the report has several advantages over the earlier and more pretentious one on the same subject. Although made up of diverse elements, the Mediation Commission was able to agree on a single report. It is written in much better temper than the factional report of the Industrial Relations Commission that received the most publicity and it comes at a time when the whole nation is solvered by the heavy responsibilities of war. It ought, therefore, to be accepted in serious spirit by employers and workers the country over. It ought to mean improved relations and better service in every industry.

# UPS AND DOWNS OF HEALTH

OV. SAMUEL W. McCALL, whose forceful recommendation of health insurance to the Massachusetts legislature of 1916 encouraged the friends of social insurance throughout the country, renewed his recommendation this year, despite the presence of war. In fact, declared the governor, measures for the promotion of health are of special importance during war, and health insurance, which relates directly to the health of women, children and industrial workers, should receive especial consideration at this period.

But the Massachusetts legislature may not follow the governor. Last spring the legislature refused to grant him authority to appoint a health insurance commission of five members to study and report upon the subject, and instead created a recess committee of nine members of the legislature and two appointes of the governor. The report of this commission, recently rendered, splits into a majority and a minority section in which nine Republicans line up against two Democrats.

The majority report indicates that considerable attention was given to the question, How much demand is there for health insurance? rather than to the facts which would show the need or lack of need for it. The majority have active demand for health insurance in Massachusetts at this time, and that there is opposition to any compulsory and contributory health insurance law among employes, employers and physicians. The extension of preventive medicine is hailed as the real solution of the health question. Welfare work along health lines in industrial establishments The enlargement of is commended. the life insurance system administered through Massachusetts savings banks is favored, and also an expansion of dispensary clinics.

The commission expended approximately \$15,000, of which \$12,000 was for salaries of the members and the secretary. Two investigations were conducted one into the number and extent of dispensaries and out-patient departments in Massachusetts, the other into the causes of dependency among families assisted under the mothers' aid law. The latter study was featured in Governor McCall's message as having indicated the great extent to which dependency, causing expense to the state, is caused by illness, and from Governor McCall's account of the study (which has not yet appeared in print), it would appear that an important contribution to the subject had been made. The commission's report, however, only slightly refers to its own investigations in this regard.

An indication of the commission's general attitude towards the subject is perhaps evidenced by its reference to the "failure" of the tuberculosis sanatorium benefits which were made part of the health insurance system in Great Britain. The commission, however, failed to mention that in the same official report from which this criticism of the tuberculosis work is quoted high commendation is given to the general value of the health insurance system in Great Britain in all its main bearings.

The minority report takes issue with the majority on the question of need, believing that there is sufficient proof of the need for health insurance, and recommends that the system be non-contributory. The minority propose a commission of five, to be appointed by the governor, with an appropriation of \$25,000 for a two-vear period.

# TO STUDY THE CAUSES OF CRIME

HE appointment of Dr. Herman N. Adler to be state criminologist in Illinois calls attention to the high degree of usefulness which that new and interesting position is expected to achieve. The criminologist is head of a division in the state Department of Public Welfare and is charged with "supervision of the professional and scientific work at the state penal and correctional institutions," In reality, this division is an extension of the idea and methods of the Juvenile Psychopathic Institute in Chicago, where Dr. William Healy conducted his epoch-making studies of juvenile offenders several years ago and not only gathered material for his book, The Individual Delinquent. but laid the basis for a new departure in the diagnosis and treatment of crime. Complete preliminary investigation of the mental, social, physical and hereditary factors in the life of each offender is according to this method, the prerequisite not only of accurate diagnosis of the cause of the criminal act, but of subsequent treatment as well.

subsequent treatment as well. The criminologist not only becomes the director of the institute but has these general duties to perform: to conduct investigations into the nature, causes, treatment and prevention of delinquency; to serve as a center of information and education in regard to the scientific and professional aspects of delinquency; to cooperate with the super-intendent of prisons, the superintendent of pardons and paroles, and the officers of each division, as well as with other public and private agencies throughout the state, dealing with problems of delinouency.

Local branches of the criminologist's division will be established at the various penal and correctional institutions of the state, and also at other places to cooperate with courts and local authorities. Meanwhile, plans for the development of the institute include establishing in each county the same kind of cooperation with the state that now exists in Cook county. This will enable the

# THE MISSING FOUR HUNDRED

WE need you badly, you who have failed to renew your cooperate subscription to the SURVEY. At this date last year we were \$4,039 ahead. To even up the difference we want 400 volunteer "co-op's" at \$10 apiece.

PRINTING and postage are going up. Subscriptions are going down and yet we are getting out a magazine that is more useful and stirring than ever before. If your son is in an army camp, the SURVEY tells you how his health and recreation are cared for. If you are giving to war relief, the articles by Paul U. Kellogg, editor of the SURVEY, are a vivid first-hand narrative of reconstruction and relief, in France, Belgium and Italy. Whether you are employer or employe, you can read industrial news of interest in the SURVEY—about adjustments due to war, the housing of munition workers, the settlement of labor disputes. Whatever and whoever you are, you can't help finding inspiration for service in the SURVEY.

BUT though we are saving on circulars, cutting down issues, reducing staff, we must have a bigger bank account. We must have behind us again SURVEY ASSOCIATES 1,000 strong. This year of all years we need your renewal and encouragement. And because we know you, too, are facing war economies and war demands, we appreciate your giving, twice as much.

### THE RIGHTS OF SMALL NATIONS

The following resolution, introduced by Senator Borah, of Idaho, has been re-

The following resolution, introduced by Senator Borah, of Idaho, has been re-ferred to the Senate Committee on Foreign Relations:

Be it resolved, By the Senate of the United States,

1. That it is indispensable to the future permanent peace of the world that the
national, political and economic rights of small and subject nationalities be restored and conceded.

and conceacu.

2. That if the coming peace is not to be illusory, it must be inspired by justice alone and not by strategic considerations of the selfish, economic interests of the dione and not by strategic considerations of the seight, economic interests of the strong formers; that the terms of peace should exclude all peace provisions which give any nation advantage, privilege or concession not equally shared in by other nations, and that hereafter when outside assistance is required by any conservy for the development of its potentialities the opportunity to share in this develop-ment shall be free and open to all other countries on equal terms,

2. That the right of each small and subject nationality to separate deliberative representation at the peace conference be recognized, and that its cause and interest

terpresentation at the peace conjective version and that its course and interest be discussed and determined in open, public session.

4. That the nations that have declared themselves champions of world demacracy and of the liberties of small and subject nations make their position clear morecy and of the toerness of small and subject nations make their position clear to the world by pledging themselves to favor the admission of separate deliberative representatives of all nationalities into the peace conference.

5. That in no case should anyone be disturbed because of race, language or religion, nor on that account be subject to intolerant treatment; that everyone has a right to civil equality, liberty of conscience and religion, to the free use of his

language and the pursuit of happiness.

6 That the repatriation of all persons exiled or foreibly removed from their
hones for whatever alleged reasons be the first obligation of the power immediately responsible therefor.

7. That complete restitution should be made by such power for all private property destroyed, and full reparation for all damage done, and that these should be guaranteed by the power immediately responsible therefor.

8. That secret diplomacy, one of the traditions of autocratic and personal governments, the chief tweepon of despotism and the most prolific source of the world's disturbance, is the one indispensable instrument for the opperation of small nations; that it has and can have no place in a democratic world, and should be rejected and discarded by all civilized nations.

(Continued from page 547)

institute to deal not only with those children that come before the juvenile courts but also with those that come before the county and criminal courts.

In this way perhaps the most farreaching opportunity existing anywhere in the United States will be afforded, both to gather facts concerning the specific causes of crime and to apply treatment at that time in the life of the individual where there is the best chance of obtaining remedial results.

Dr. Adler was formerly assistant professor of psychiatry at Harvard University and chief of staff of the Boston Psychopathic Hospital. He went to Illinois less than a year ago for the National Committee for Mental Hygiene, to make a study of facilities for the detection and care of mental diseases and mental deficiencies in Cook county. This study, requested by the Chicago City Club, was made under the auspices of the Illinois Society for Mental Hygiene.

### HOW BIRMINGHAM EMPTIED HER JAIL

HAS Birmingham, Ala., become irre-trievably good, or has everybody stopped drinking and gone to work? It is a far cry from the days, prior to 1912, when hundreds of prisoners crowded her city jail and stockade, and the Birmingham survey [see the Survey for January 6, 1912] revealed undreamed-of conditions of filth and bad sanitation, to the present, when only hay is stored in the great model jail that was built to relieve these two. As a result, Birmingham is asking not only what is she to do with her jails, but what is the cause of the absence of prisoners. That there is more truth than guessing in the second of the explanations offered above is indicated by facts well known to all Birminghamers, says Mrs. W. L. Murdoch, who writes to the SURVEY:

"In 1915, about August, there were 134 prisoners in the down-town iail and 109 in the new city prison on the south side. Prohibition went into effect in the fall of that year and the man then commissioner of public safety saw in a law only one thing, namely, absolute enforcement. Hence, orders were given to the police department that prohibition was to prohibit. Gradually, each month, the number of arrests grew fewer, drunkenness on the streets was never seen, and in August, 1917, there were only twenty-eight prisoners in the city iail and twenty-three in the big southside prison. A warden said the other day it was no uncommon thing in the old days of a 'wide-open town' to see 210 men brought in in one night.

"It was deemed unwise to keep operating the south-side prison with so few, and in less than a month the total number of prisoners was eleven-not a white man or woman. This number has varied from twenty-nine to eleven since, and so we, like Kansas, are asking, What shall we do with our prisons?

"The great prosperity which the city

enjoys at present did not immediately follow the enforcement of prohibition, The commissioner of public safety therefore declares that, in his judgment, it is certain that 75 per cent of the decrease in crime is due to the state prohibition law and the federal 'bone-dry law' -in other words, no open saloons and a scarcity of 'blind tigers.'

"Nevertheless, the decline in crime has been so rapid in the past few months that one feels sure that the absence of idle men upon the streets must be a very large factor; no loafers at any street corner, and work for everybody at good pay. Since busy men are not the ones who fill jails, there would seem to be a tremendous object-lesson for students of prison affairs in all this. If keeping men busy makes for a better standard of morals among them, why, why do we ever let men be idle in prison?

These things are true not only of Birmingham. All over Alabama the question is being asked: What shall we do with our jails? It is not difficult to see that great industrial cities, freed from liquor, with prosperity sufficient to keep men busy, may become cities of high moral standing."

### DEMOCRACY ON THE SOCIAL IINIT PATTERN

HE social unit plan, as worked out THE social unit plant, to the past year in practice in Cincinnati and as interpreted jointly by Mr. and Mrs. Wilbur C. Phillips, executives of the National Social Unit Organization, at the first annual meeting in New York last week, is primarily an experiment in democracy. It is given point at the present moment by the surge of the masses of people everywhere towards a greater control of government and by the general uncertainty as to just what form and expression the seemingly inevitable reorganization of society during the quick-coming years will take. People no longer question that changes of a far-reaching and (to many) disconcerting character are upon us. The problem is, How can these changes be best effected?

One suggested answer is found in England in the growth of the guild idea. Wallas, Orage, Cole and other political philosophers are among its exponents. A possible outcome is the reorganization of the House of Lords on a guild basis so that business, professional and trade groups will participate directly in government. This is in line with the theory of "functional government" advanced in this country by Felix Adler, Herbert Croly and others.

The unit plan applies the principles of functional government experimentally in a laboratory area of 15,000 people. A community organization has been created which takes the form of a congress. The lower house is composed of representatives of thirty-one blocks of about 500 population each. The upper house is composed of occupational group or guild representatives—a doctor to represent doctors, a trade unionist to represent organized labor (later to develop into wide representation of many forms of labor), etc. Each house has an executive, and the congress itself has one. The three executives constitute a council or commission of executives.

The block representatives at present are women. Their task is to know each man, woman and child in their precincts, to study social needs and to convey social knowledge to their constituents. The block workers are going to school systematically to the group executives who, as technicians in different fields, constitute the departmental heads. From the doctor they learn facts about health, both in personal hygiene and in environing conditions. They also are taught standards of health by which they may know to what extent the knowledge of the people on health matters is below par and how far their needs for wholesome living conditions, skilled service and the like are from being satisfied. From the housing expert they will learn housing standards, and so on. The things taught them are not to be based on individual, but on group opinion, representing in each case a consensus of the thought of the entire group membership. Thus the organization serves as a sort of state system of social education in which the groups are the faculties and the citizenship the

At the annual business meeting of the National Social Unit Organization, the offices of president, first and second vicepresidents were abolished on recommendation of Gifford Pinchot, the retiring president. In their place was created the position of executive with power to choose his own assistants subject to approval by the general council. This is in line with the principles of organization worked out in Cincinnati, where each council has but a single responsible head-the executive-who formulates and submits plans, programs and policies to his council, but has no vote therein. When such programs have been discussed, revised, rejected or approved by his council, and a policy and plan finally adopted, he becomes the administrator with power to carry them out. This experiment was reported as working out satisfactorily as a method of combining efficiency with democracy-of placing control for all policies completely in the hands of the people and at the same time giving their executives a maximum of administrative scope and freedom,

Mr. and Mrs. Phillips have been elected executives for 1918. Other officers are as follows: honorary executive of the general council, Gifford Pinchot of Milford, Pa.; executive of the citi-

zens' council, Mrs. Charles L. Tiffany of New York; honorary executive of the citizens' council, Mrs. J. Borden Harriman of Washington, D. C.; executive of the occupational council, Courtenay Dinwiddle of Cincinnati; treasurer, T. L. Chadbourne, Jr., of New York; comptroller, Arthur Young of New York and Chicago

John P. Frey, editor of the Iron Moulders' Age, was elected to represent organized labor on the occupational council. Robert P. Bass, former governor of New Hampshire, Raymond Fosdick, clairman of the Commission on Training Camp Activities, and Henry G. Stevens of Detroit, were elected members of the citizens' council.

### WHEN CONSCIENCE AND WAR JOIN ISSUE

RELIGIOUS conviction against war has been having an airing in Vermont. The people of that state, it appears, have had little experience with sects opposed to war, such as the Quakers and the Mennonites, or of individuals who hold conscientious scruples against bloodshed. They have now before them the case of the Rev. C. H. Waldron, a Baptist minister of Windsor who was charged with causing insubordination and disloyalty among the young men belonging to his Bible class. A literalist in the interpretation of the Bible, Mr. Waldron holds the Quaker views about war, accepts the Pentecostal ("Holy Roller") faith in the physical manifestation of the Holy Spirit today as it was manifested to St. Paul on the road to Damascus, and believes that the services of the church should be for worship and the preaching of the Gospel and for these things only. His wife comes from a Mennonite home and he was educated a non-resistant at Treveca College, Nashville, Tenn.

Mr. Waldron first came into public notice when a demonstration against him was held on the evening of "Liberty Loan Sunday," October 21. A large group of people, learning that he had not observed the suggestions for the day at the morning service, because of his conviction that the church services should be used for worship only, assem-bled in front of the church in the even-They called Mr. Waldron to the ing. They called Mr. Waldron to the steps and asked him to sing the Star Spangled Banner. This he said he would do if they would come in and hear him preach. Some consented to do so; whereupon, draping the flag about himself, he sang the national anthem.

That did not quiet suspicion, however. Mr. Waldron continued to be attacked for what was regarded as lack of patriotism. The matter was reported to the federal authorities and the Baptist state officials, and culminated in an indictment by a federal grand jury, charging him with wilful and felonious interference with the military forces of the United States by causing disloyalty among the young men who were members of his Bible class.

A number of Vermont newspapers immediately assumed him guilty. Public disapproval grew and Mr. Waldron was left with only a few friends. Great difficulty was experienced in getting a lawyer, one attorney declaring that "the only defense was insanity or absolute denial of everything." A half hour before the case came to trial, two attornevs who had accepted the case provisionally refused point blank to have anything to do with it and Mr. Waldron was left without a defender. When he entered the court room the judge, who insisted upon fairness throughout, assigned him an attorney and the trial proceeded.

The evidence against him consisted in part of the testimony of a patriotic citizen who charged Mr. Waldron with lack of patriotism, and of statements by five of the young men of Mr. Waldron's Bible class. The taint of pro-Germanism was considerably rubbed off when it developed that Mr. Waldron regarded the Kaiser as "anti-Christ" and the "beast" of Revelations 13. One young man testified that Mr. Waldron, in speaking about his church running down, said: "The boys have gone and enlisted in spite of all I can do." Mr. Waldron explained that he had said that the church was running down in spite of all he could do, that families were moving away and the boys were

Another young man testified that Mr. Waldron had said to him: "When the draft comes, do not heed it. The law will take you up, fool around with you for a year and then the war will be over." Mr. Waldron explained that the young man had been worrying about the draft, that he had told him not to worry, that it would take some time for the law to operate, that only one in ten would be taken, and that maybe the war would be over before he was called. Another testified that Mr. Waldron had said, "To hell with patriotism," but admitted that the remark was made in ridiculing the Kaiser who was devastating Belgium and praying to God for success in the name of patriotism.

Most use was perhaps made of the evidence that Mr. Waldron had given two of the boys copies of a religious tract entitled The Word of the Cross. In this tract questions by military officers are answered with Bible quotations and religious reasons upon which exemption on grounds of conscience might be claimed. Mr. Waldron testified that he had ordered the pamphlet from a large advertisement in D. L. Moody's Christian Worker's Magazine, which described it as "an im-

portant and timely message for the Lord's people in these troublpus times." The attorney for the defense pointed out, also, that the same advertisement had appeared in The Record of Christian Work, a magazine printed and published in the town where the trial was being held. Brattleboro.

It was not the evidence in his favor, however, so much as the religious spirit that he and his friends brought into court, that beat down prejudice against Mr. Waldron and made conviction impossible. "These people," writes the Rev. Harold L. Rotzel, organizing secretary of the League for Democratic Control in Boston to whom the SURVEY is indebted for its account, "brought into the court room an unmistakable spirit of religious faith and of humble regard for the truth. Their testimony was of their faith as well as of the matters at issue before the court. They described their meetings and the physical manifestations of the Holy Spirit, clearly, quietly, simply and without hesitation. To be 'under the power' was to be Godconscious rather than man-conscious: the falling upon the floor was purely an incidental matter common only to the more excitable among them; the manifestation might be and usually was while kneeling or sitting. I had only to recall that remarkable book of the late Professor James, The Varieties of Religious Experience, to realize that even to the cold eye of science, these people have a place in the religious sun "

It was this atmosphere that caused a rift in the ranks of the public. The result of the trial was to split opinion in the town wide open. Many who had not followed the trial continued to assume Mr. Waldron guilty. Others came to believe that he was innocent. The jury was unable to agree after twenty-four hours' deliberation, and was dismissed without a verdict.

Subsequently, the district attorney

THE Sheffield Scientific School and the School of Medicine of Yale University offer a course of one year's study leading to a

# one year's study leading to a Certificate in Public Health

The course is open to men and women who hold either the degree of B.A. B.S., Ph.B., or M.D., although other mature persons qualified by special experience in public health may be admitted with the approval of the Committee in Charge. Fundamental training in physics, chemistry, biology, and general bacteriology is required for entrance.

The academic year of 1918-1919 begins September 26, 1918. The charge for tuition is \$150, per annum.

Further information may be obtained by addressing the Department of Public Health, Yale School of Medicine, New Haven, Conn. announced that he would re-try the case and the date has been set for February 26. Mr. Waldron's friends, the number of whom has grown since his trial, declare that this reveals a determined intention to convict him.

### TOWARDS A FEDERAL HOUS-ING POLICY

BOTH houses of Congress have ping Board Emergency Fleet Corporation to spend 550,000,000 to provide houses for slipyard employes, half of this amount being appropriated for immediate use. Though the House adopted some minor amendaments, it is expected that the measure will become law without more delay.

This, of course, only covers part of the emergent housing need for war workers. Another bill has been introduced to appropriate \$50,000,000 for the use of the Labor Department to provide houses at war manufacturing centers other than shipbuilding towns, The new advisory committee of the Department of Labor, of which ex-Governor Lind of Minnesota is chairman. is engaged in a survey of the whole housing situation and will be ready for definite recommendations as soon as the bill is passed. A director of housing will probably be appointed within the next few days. He will be assisted by a policies board composed of specialists on the legal financial construction, real estate, social and transportation aspects of the problem.

A new menace which is arising here and there is the sporadic effort to provide temporary accommodation to meet local needs which lowers existing housing standards and brings with it new dangers to the public health. Thus a Californian magazine writes:

"It may as well be understood plainly that any attempt to introduce unsanitary housing conditions with antiquated tenement or ghetta characteristics will be resisted. The statement that the cost of plumbing and other building material is prohibitive is no excuse for not erecting the proper kind of buildings; these materials will not be cheaper, if as cheap, within the next five or perhaps ten years to come, and probably will never be cheaper. . . . American workmen are earning from four to ten dollars a day and are able and willing to pay such rents as would produce a splendid income from well-built, sanitary apartments and flats where they can live in comfort and bring up their children in decency. The American workman doesn't want to live in a shack with a community toilet."

In Jersey City, the Chamber of Commerce, after a careful survey of the situation, has come to the conclusion that model tenements constructed in blocks and affording housing accommodation in two-, three-, four- and five-room apartments for 4.000 families would meet the immediate need, and that these homes could be constructed on satisfactory lines at an investment of about \$6.000,000, the nominal returns on which would be equivalent to about 14 per cent. But at the present time "it seems impossible to secure either private or bank capital in Jersey City to finance a building program on any such extended scale, and even were capital forthcoming, the chamber is convinced that without government assistance it would be impossible to secure either tile necessary labor or building materials."

John Nolen writes: "My most re-

John Nolen writes: "My most recent work has been at Wilmington, where we have just succeeded in raising a fund which will provide for the first million dollars' worth of housing for workers, and lead, I feel confident, to the expenditure of a couple of million dollars more later on." Evidence of local activity conses from other places also, but in nearly every case it is accompanied by the statement that material cannot be obtained for love or money or that the contemplated development only touches the fringe of the problem.

### COMMUNICATIONS

### PAPER BLANKETS

To the Editor: Paper keeps heat in. Three or iour large newspapers, spread between the coverings of a bed, will give as much warmth as an extra blanket. In these times of cold weather and high prices, this is a secret worth knowing.

ALICE STONE BLACKWELL.
Dorchester, Mass.

### "GRAIN FOR BRITAIN'S BEER"

TO THE EDITOR: A SCRIET COPPORTING THE PROPERTY OF THE PROPERTY OF A STATE OF THE PROPERTY OF

In Great Britain in 1917 the amount of beer produced was limited to only about 271% per cent of the normal production. We did not reduce ours at all last year; on the contrary, in the twelve months ending June 30, 1917, we produced over one million barrels more beer than in the preceding year. We used about 473 million more pounds of foodstuffs in making beer than in the

preceding year. The grain for beer this year has been reduced in the United States to 70 per cent of the previous amount, and Great Britain has increased by about one-fifth her limit for the first

quarter of this year.

But even so, we have not placed the limitation on beer production that Great Britain, or even Germany, has fixed. Dr. A. E. Taylor and Vernon Kellogg. of the United States Food Administration, tell us that 50,000,000 bushels of barley would supply the normal bread ration of 7,000,000 people. But we used for malt liquors in the last official year 61,755,979 bushels of barley. We also used about 115,000,000 pounds of sugars which could be used by the people in the form of syrup (which the Food Administration is urging us to use to save cane sugar), and other healthful substitutes for cane sugar.

This restriction of grain for liquor purposes may become international, but first of all we need to put pressure where it will be effective in stopping our own use of grain and sugar in beer and other malt liquors.

other mait inquors.

### NEW YORK'S CHARITIES

TO THE EDITOR: As a subscriber to the SURENY may I say that I am greatly pained at the attitude you have taken towards the new city administration. You have condemned it in advance without presenting any evidence, merely dubbing it "Tammany." The cartoon on the front page of this week's issue [January 19] is an appeal to prejudice pure and simple, and is unworthy of a journal which is written for intelligent people who are presumably open to evidence and to argument.

The assumption that all those who voted for the present administration are not interested in the city's unfortunate wards is a libel on the immense majority of the voting population of this city. You insinuate that up to the advent of the last administration the poor were exploited for the benefit of a particular political party and they are again in danger of being used in the same way. I can assure you from an experience of over fifteen years, during which I have had almost daily intercourse with the officials of the department of Public Charities here in Brooklyn, that you are entirely mistaken. In fact, during the last administration there was a much longer delay in dealing with applica-tions for relief than ever before in my recollection.

You evidently do not like the selection the mayor has made for some of the important offices in his gift. But his judgment may turn out to be the bet-

# Washable Dress Fabrics

# at McCutcheon's

James McCutcheon & Co. announce their first showing of Imported and American Dress Cottons and Linens for the Spring and Summer of 1918.

The collection of foreign goods was personally selected in Europe last fall by our own buyer from the leading manufacturers of France, Switzerland, and Great Britain. Our American manufacturers have provided us with some wonderful fabrics completing the finest assortment of Dress Cottons we have ever presented.

Special attention is directed to "Rodiers" fabrics, Crepes, Crepons, Plaided Voiles, Coin-Spots, Plumetis, Chenille Spots, etc., Swisses from St. Gall, Handkerchief Linens, Ginghams, Organdies, Batiste, Hand-printed French Crepes, Japanese Crepes, White Skirtings and Dress Linens in every shade.

ter one. I do not forget that the social workers of the city practically dictated the appointment of the administrators of the Department of Public Charities under Mayor Mitchel, with the result that these gentlemen, clothed with a little brief authority, helped to wreck an administration which promised well, and cut short the public career of some men from whom great things were expected. We must be modest therefore in our criticism of the new officials; if they make mistakes we won't have any responsibility for them.

Those who have known Mayor Hylan as magistrate and judge feel certain that the poor who are charges of the city government will be properly cared for and protected during his administration to the full extent of the law.

There is just one other point. The SURVEY is an influential journal. It has replaced the religious newspaper and, even the Bible in many instances on the library table of many of the younger professional social workers. The lack of respect for lawfully constituted authority is one of the crying evils of the

day. Apart altogether from the personality of the men called to high public office, their official position entitles them to respect and no good purpose is served by belittling them. If one party may do it, then another may, and the result will be a general weakening of the bonds which hold society together.

PATRICK MALLON.

Brooklyn.

In so far as Mr. Mallon's letter is a defense, or an implied defense, of Tammany, we are willing to let time decide between him and us, if time has not already put that organization in its place. Meanwhile we must point out place. Meanwhile we must point out that "delay" in handling applications for relief is not the only test of service in a department of public charities. The enlightenment shown in meeting, in some final way, individual problems of misery is another. Do "those who have known Mayor Hylan as magistrate and iudge" feel certain that his administration is serving the best interests of the city's wards by its present effort to get rid of William B. Buck, superintendent of the Sea View Hospital for the tuberculous, who is now being tried on trivial charges? One of these is that Mr. Buck permitted attendants to work without uniforms, when the very money for uniforms was denied him. Another is that he "absented himself without leave" in order to make some necessary purchases of clothing for himself! Mr. Buck is one of those who gave good service to the city under Commissioner Kingsbury. It is the latter's successor who is bringing these charges against him. With Mr. Mallon's belief that "official position"—we presume that, with New York city's educational in-quisitors, he would add "as such"-entitles men to respect and that "no good purpose is served by belittling them, we have no sympathy. No good purpose is served, we admit, by malicious or unjustified belittlement. But the foundation of a democracy is free criticism of its public servants,-Editor.]

### TEMPERANCE

TO THE EDITOR: I'm short of money or I'd add a subscription to someone else. I write a great deal for Akron papers and for temperance and religious periodicals. I cannot understand why President Wilson, with his wartime powers, allows the enormous waste of grain, sweets and coal in breweries. I'm sending you clippings. God grant that thirty-six states come out for God and Home and Humanity.

I sent one of the cigarette clippings to the National Food Commission with the suggestion that we plant our southern tobacco fields in sugar cane; our northern barley fields in wheat; our northern tobacco fields in corn; that we

### WHAT COLONEL AZAN SAID

To the Editor: May I say a few words about my interview with Colonel Azan? As it has gone through the press (using the Survey report as a basis) it has suffered interpretations not conformable to the truth or to Colonel Azan's thought (the Survey for December 8, 1917, page 294).

He never wrote an article himself—it was only a talk with me. That is the first misunderstanding. Second, he never said, I never said, that the French army was drunken. We talked on the nature of wines. He said what we all know now, that French wines can and do intoxicate, and then at my request he told me what might be done to protect our troops in France from wines.

I do hope we shall be able to get better protection from wines for our troops abroad, for 100 per cent efficiency means a total abstainer behind every gun, not a wine-drinker. I do hope General Pershing will soon be able to arrange a more satisfactory condition.

Cambridge, Mass.

### "A SOCIAL TRAGEDY"

TO THE EDITOR: The article, A Social Tragedy, by Mr. Culp in the SURVEY for December 19, surprised and bewildered me very much, for I was brought up in Virginia, a state bordering on North Carolina, and I never heard of an eleven-year-old boy or anyone else being sentenced to prison for life for burglary. I once heard of an adult Negro who had already served two terms in the penitentiary being sent back for nine years for breaking into a house, but this is the severest punishment of the sort which came to my attention. I cannot believe that conditions in North Carolina are so very different from conditions in Virginia.

It seems to me that there must be some sort of misrepresentation in Mr. Culp's article—possibly in a suppression of the date of the occurrence. The

article has given the impression to everyone I know who has read it that children are being sentenced to life imprisonment at the present time in North Carolina. Possibly this is not the impression which Mr. Culo meant to conves-

May I know the courts in which these sentences were passed, the names of the judges involved, the dates of sentence, the circumstances and all other details which Mr. Culp has regarding the matter?

I have written to the governor of North Carolina concerning the matter and have received the following letter from Santford Martin, the governor's private secretary:

"Replying to your letter of January 9, I beg to advise that the governor has not read the article, The Social Tragedy, to which you refer. He has pardoned a great many prisoners since he entered office a year ago. Among the number was one boy eleven years old when he was sent to prison. He was not sentenced for life, however, but was serving a term of twenty years for burglary. At the time the governor pardoned him this prisoner was twenty-two years old.

"It is also true that the records of the state prison show that other boys have been sent there at ages ranging from twelve to fifteen. However, they were sentenced eight or ten years ago, before the state had a reformatory. We now have what is known as the Stonewall Jackson Training School in which youths convicted of crime are confined. I do not think there is a Superior Court judge in this state at present who would think of sending an eleven-year-old boy to the state prison. We have happily outgrown that idea of justice."

ELISABETH W. BROOKE.

# THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

SHANNE

### KEY

If you know the name of the agency or organization, turn direct to the listsponding officer, etc. [They are arranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject classifications, as "HEALTH," printed in

Correspondence is invited by the Correspondence is invited by invasions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but ofor those seeking information, our or-fers an opportunity for you to share spiritedly and seriously in your com-munity or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the Survey, and we shall en-deavor to get your inquiry into the right bands.

### WARTIME SERVICE

"I low the Suver can serve"
I was the subject of an informal conference held rarly in April, in our library, to which we asked the executives of perhaps worning national social service organizations. The consocial service organisations. The con-peract was a unit in feeling that as a link between organised efforts, as a means: for letting people throughout the country know promptly of needs and national program—how, when and where they can count locally—the Source was at the threshold of an opportunity for service such as has a performantly for service such as has a superformance on advantaged enter-tables. prise.

The development of this directory is In a development of this directory is one of several steps in carrying out this commission. The executives of these organizations will narvor questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands.

Listings \$3 a month for card of five lines (in-cluding one listing in SUBJECT INDEX by full ame and three by initials), fifty cents a month for each additional line. No contracts for less than three months. Additional charge of \$1 for each change of copy during three-month period.

### To the Readers of THE SURVEY:

Never was the moment more auspicious to issue a great magazine of Liberty.

With the Russian people in the lead, the world is entering upon the experiment of industrial and real democracy.

The possibilities of change in this day are beyond all imagination.

We must unite our hands and voices to make the end of this war the beginning of an age of freedom and happiness for mankind undreamed by those whose minds comprehend only political and military events.

With this ideal THE LIBERATOR comes into being on Lincoln's Birthday, February 12, 1918.

### **IOTTINGS**

IOHN A. KINGSBURY, commissioner of public charities during Mayor Mitchel's ad-York city, sailed recently for France as a major in the medical corps of the United States army. He will be attached to the staff of Homer Folks, director of the Department of Civil Affairs of the American Red Cross. Dr. Haven Emerhealth commissioner under Mayor Mitchel, kas also been made a major in the medical corps.

KARL DE SCHWEINITZ will become general secretary of the Philadelphia Society for Organizing Charity on March 15, terminat-ing his work with the New York Charity Organization Society, as a lecturer in the New York School of Philauthropy, and as chairman of the home relief work of the New Rochelle (N. Y.) Chapter of the Red Cross. Mr. de Schweinitz was for some years a resident of Philadelphia as a student at the University of Pennsylvania, a reporter on the Public Ledger and secretary of the state tuberculosis society. He is well known to readers of the SURVEY as a skilled writer.

L BYRON DEACON has been appointed to the newly created position of assistant direc-tor of civilian relief of the American Red Cross at Washington. Mr. Deacon was for Society for Organizing Charity, leaving to organize the home service work of the Red Cross in Pennsylvania. Previously he was secretary of the Pittsburgh Associated Chariities, and before that financial sceretary of the New York Charity Organization Society, where he was associated with his present chief, W. Frank Persons. Mr. Deacon is the author of Disasters and the American Red Cross in Disaster Relief, recently published by the Russell Sage Foundation.

BERTRAND RUSSELL, author of Why Men Fight, has been sentenced in London to six months' imprisonment, according to the New York Times, for making certain statements in the magazine, the Tribunal, which were likely to prejudice Great Britain's re-lations with the United States. One of the statements complained of is as follows: "The American garrison, which by that time will he occupying England and France, whether they prove efficient against the Germans, will no doubt be capable of intimidating strikers, an occupation to which the American army is accustomed at home." Russell is a fellow Russell is a fellow of Trinity College, Cambridge, and heir presumptive to the second Earl Russell. He was prevented by the authorities a year ago from coming to this country to give a course of lectures on modern philosophic tendencies and problems.

A DECISION of more than local interest was recently rendered by Judge Pinckney in the Circuit Court of Cook county at Chicago granting an injunction restraining the tenants, occupants, lessees and agents of certain prettises from using the property for im-moral purposes. The application for this injunction by the Committee of Fifteen was opposed by one of the owners on the ground that he had been acquitted by a jury when tried on a criminal charge of committing the same offenses as were said to have been committed on the premises. But the court overruled the demurrer and, in commenting on the claim that the affidavits for the defendant greatly outnumbered those for the relator, said: "You cannot tell me that I should not give more weight to an affidavie by Miss Harriet E. Vittum than I should to one by a night-robed singer in a saloon."

FRANK E. WING has been granted a year's leave of absence from the general secretary-ship of the Rochester (N. Y.) United Charities to take part in the organization for the American Red Cross and the Rockefeller Foundation of a system of tuberculosis dispensaries throughout France, Mr. Wing, it will be remembered, was for many years associated with the late Dr. Theodore B. Sachs in the Chicago Tuberculosis Institute and as builder and chief executive of the Chicago Municipal Tubereulosis Sanitarium. The cable calling him to France stated that "his Chicago work especially fits him for this." Auent which the Chicago Herald observes: "Chieago needs the outside world sometimes to jog us up a bit and make us realize what it means to have our public institutions in control of politicians who prefer to make appointments for political rea-sons rather than for ability. Mr. Wing is the man the Mayor Thompson directors of the Municipal Tuberculosis Sanitarium discharged."

HEALTH INSURANCE became a part of the official program of organized labor in New York last week when at a special conference of the state federation, a bill, drawn by a special committee appointed for that purpose, was unanimously endorsed. The committee, of which James M. Lynch was chairman, had been working on the subject for a year. On January 8, they made a preliminary report to a legislative conference held in Albany. The matter was referred to the union locals for their consideration, and another conference was called for February 6 for final action. At this conference the committee's bill was accepted without accepted without health insurance, the premium payments to be divided equally between employer and employe, and, as in the case of workmen's compensation, the state to bear the adminis-tration costs. John B. Andrews, secretary of the American Association for Labor Legislation, has acted with the committee in an advisory capacity.

GOVERNOR WHITMAN nominated Lee K. Frankel last week to be a member of the New York State Board of Charities, to take the place of Dr. Stephen Smith, resigned. Dr. Smith became ninety-five years old on February 19. With the exception of six years, from 1882-88, when he was a member of the State Commission in Lunacy, he had served continuously on the board since 1881. Dr. Smith's wide experience in surgery and medicine gave him a special interest in medical charities. As founder and first president of the American Public Health Association (of which Dr. Frankel is now treasurer), and as United States commis-sioner to the Ninth International Sanitary Convention in Paris, 1894, he took an active part in the public health movement at a time when physicians generally little understood that movement. Dr. Frankel, since 1909, has been connected with the Metropolitan Life Insurance Company, being now i's third vice-president. From 1899 to 1908 he was manager of the United Hebrew Charities in New York city; from 1910-12 he was presi-New York city; from 1910-12 ne was prose-dent of the National Conference of Jewish Charities. Though a layman, he, like Dr. Smith has been particularly interested in public health, as well as in the welfare of industrial employes. He has been a member of the National Council of Survey Associates, Inc., for many years. While Dr. Frankel's nomination requires the consent of the Senate, no opposition is expected to develop.

# Some Unexpected Results of Putting Women Conductors on the St. Louis Street Cars

# By Oscar Leonard

To sounds good to hear the street cars clatter by once more," was the happy remark of a business man, when shortly after three o'clock Friday afternoon, February 8, some 3,000 employes of the United Railways of St. Louis went back to work. You should have seen the happy faces of these men. They had a right to be happy. In less than six days they won what eighteen years ago they failed to win after a bitter struggle of four months—recognition for their union. That was the one issue in the strike. Whatever other demands the men had, they were willing to arbitrate. The company would have willingly arbitrated any other demands.

How the men were unionized almost over night is difficult to guess. The United Railways Company has done all in its power to prevent organization. The company denies that it has ever discharged men for talking unionism, but there are many ways of discharging a man when there is no organization behind him to ask for an accounting. Under the circumstances, men, fearful of their jobs, did not allow their lips to utter the things their hearts desired. The company engaged in all sorts of welfare schemes. It even gave slight increases of wages. The men seemed satisfied. All this on the surface, of course—the increases did not suffice to meet the soaring cost of living.

Enter woman on the stage. The company, desiring to be "patriotic," began to train women for the job of conductor. Here and there you began to see women in trim blue uniforms. You could see, too, that the male employes of the company were not happy. The way they looked at the women conductors indicated it clearly enough. They began to talk about the possibility of women taking their jobs. According to officials of the newly formed union, old employs were demoted and their places given to women. The men felt that they were at the mercy of the company and that the company would use the women as a club to hold down wages and to frustrate attempts to better labor conditions. Whether the men were right or wrong in this supposition, is not the question. The fact remains that they felt that way.

To men in such a frame of mind it is easy to talk unionism. Organizers came along and urged the men to organize for mutual protection. A union was formed secretly. A committee was sent to the general manager of the company. He refused to meet them. That was on Saturday, February 2. That evening all men were notified of the action of the company and about midnight they took their cars back to the sheds and walked out. Sunday morning the city traffic was tied up. Here and there a car ran. Jitneys began to do a land office business, charging anything they chose. People were inconvenienced, but they sympathized with the strikers.

Mayor Kiel immediately called a conference of representatives of the men and of the company. The union officials appeared promptly in the mayor's office; the company was conspicuous by its absence. President McCulloch of the United Railways said he did not want to meet "professional agitators" coming from out of town to stir up trouble in St. Louis.

The United Railways Company of St. Louis is owned by the North American Company, which owns transportation systems in a number of other cities. The North American is reported to have fought unionism in all its holdings. It certainly did in St. Louis. The officers of the North American came to St. Louis—and the union wanted to know whether it was proper for "capitalistic agitators from out of town" to enter the fight!

At this juncture the St. Louis Chamber of Commerce stepped in. After all, the out-of-town interests who own the street railways did not mind very much what was happening to the city as a result of the strike. While it was costly to the company, they felt that they had too much at stake in connection with their interests in other cities to give in. But the business men and manufacturers of St. Louis, the leaders, the mayor—all who had the interests and welfare of St. Louis at heart, felt that an agreement must be reached quickly.

The press, which almost unanimously belabored the men on the first day of the strike, veered around. It began to support the strikers. Editorials and cartoons indicated that the

At the beginning of the St. Louis street car strike, public and newspapers resented the appearance of "outside agitators" who were organizing the men. Before the week was over, the argument was against the "capitalistic agitators" from out toom, who made the citiens usual to their work and refused to confer with the men. Cartoons from the "four-bipapech."

attitude of the company was out of date and out of place. The company was reminded that while we fight for democracy abroad we must not forget that democracy gives men a right to belong to organizations of their choice.

After many conferences announcement came that the company was willing to meet the "representatives of their former employes," to which Mayor Kiel added that the employes night choose their union leaders to represent them. For five hours representatives of the union, of the company, of the Trades and Labor Council, of the Chamber of Commerce, worked hard to come to an agreement. Friday morning, at 1:15 A. M., the announcement was made that an agreement had been reached.

The same day the men met and ratified the agreement for a preferential shop, leaving wages and hours of labor to be arbitrated within ten days. The company is to transact business relating to the union with the representatives of the union as such. All men discharged for union activity are to be reinstated and all strikebreakers employed during the strike are to be discharged. The women conductors, some of whom had walked out with the men when the strike was called, joined the union and will receive the same scale of wages as the men.

While the strike lasted almost a week, there was practically no violence. The 3,000 strikers were allowed to march. Here and there a minor skirmish was reported during the week, but on the whole there was practically no damage to property.

In the beginning of the strike the Post-Dispatch published a cartoon in which the company holds on to the strap of "anti-unionism." The paper asked the company to "move torward, please." The day the strike was settled the same cartoon was used with the company having moved forward to the strap of "unionism." After eighteen years of struggle and hope on the part of the street railway employes St. Louis has moved forward.

## The Death Blow to England's Poor Law

## By Bruno Lasker

OF THE SURVEY STAFF

HE second report issued by the British Ministry of Reconstruction is in its way as remarkable as the first (which was discussed in the SURVEY for January 26). It bears the title The Transfer of Functions of Poor Law Authorities in England and Wales, and is the work of the ministry's Local Government Committee. presided over by Sir Donald MacLean, M.P., and representative of both conservative and advanced poor-law reformers as well as experienced officials. Lord George Hamilton and Mrs. Sidney Webb, the one a signatory of the moderate majority report of the famous Royal Commission on the Poor Laws of 1909, the other of the radical minority, serve on this

Public opinion, since the report of that royal commission, has swing almost completely behind the promoters of the minority proposals who, until the outbreak of the war, kept up a lively campaign by means of a national organization created for that purpose and by the publication of educational literature in every form. While in their two main pointsthe abolition of boards of guardians and the transfer of their functions to county and county borough (i, e., city) councils -the proposals of the Local Government Committee embody the joint recommendations of the earlier commission, the London Times is hardly justified in describing the machinery recommended to hring about this tremendous change as, "in effect, a compromise between the proposals of the rival parties." On every matter of real importance, the view of the one-time minority has been confirmed; and this confirmation practically ensures the early passage of laws bearing its imprint.

The main facts in the present poor-law situation are not very different from those so elaborately ascertained nine years ago, although in some respects methods have been improved and although there is now practically no need due to unemployment. Outside the poor law, however, the public welfare machinery of the state, much complicated by the social legislation of the last pre-war years, has become all but congested by war conditions.

There is now hardly a form of destitution in England which is dealt with by a single authority. The chief reason for this is the rapid growth of applied sociology which, during the last two decades, has prescribed new methods of treatment for one type of case after another. The England of today no longer looks upon "the poor" in the mass as it did in Dickens' days. Even though preventive effort has remained sadly behind present knowledge of social prophylaxis, almost every year has seen some advance in the differentiation of remedial and protective processes, creating new functions both of state and local administration.

Even the most conservative members of the royal commission had to admit in 1909 that the boards of guardians, with their obsolete union areas-entirely different from administrative areas for other governmental purposes-and with their long tradition of heterogeneous services to the poor as such, could not be entrusted with the new social activities of organized society arising from the demand for more ample, more individual and more truly economical provision for the nation's disinherited. It was too late for the boards to mend their ways; for, already there had sprung into existence rival administrative bodies-most of them branches of municipal and county government but some under direct state controlwhich had been entrusted by Parliament with responsibilities for social care and prevision similar to those historically their own. Every improvement of method on the part of the poor law authorities only brought their doom the nearer by increasing this competition.

"During the nine years which have classed," says the New Statesman, "the duplication of services and the overlapping of public provision, especially in the two-thirds of England which are essentially urban, have very greatly increased. The number of persons assisted from the poor rate has greatly declined. until it is now far below what it has been at any previous period for at least a century." This reduction in the number of paupers is not primarily due to economic betterment; the world has become more humane, and its endeavors to mitigate suffering are now made at an earlier stage of declining prosperity or health than ever before. It is due to the fact that municipal and county councils, through their many social welfare activities, now spend three times as much on various forms of public assistance as the poor-law unions spend.

#### Seven Varieties of Outdoor Relief

THERE are seven different public authorities with powers to give money in the home. At least six provide medical treatment. Five of them may subsidize the able-bodied unemployed; and three give educational treatment of one kind or another. Social workers in England are fond of telling stories illustrating the various ways in which different public bodies-and sometimes different committees of the same body -may all interest themselves in the same family and help it along without being able to stop the duplication of effort even when they are aware of it. It is obvious that if any thinning has to be done the driest branches will have to go first. By lopping off the boards of guardians and the unions the reformers will undoubtedly remove the largest and most intractable cause of overlapping. But so long as there is vitality in the body politic, so long as new methods of dealing with old evils win gradual recognition, there will always be some overlapping of new and old. Efficiency merely demands that this be reduced to a necessary minimum.

By getting rid of her poor law England will at last reduce that citadel of medievalism in her system of public weltare, the general mixed workhouse (or almshouse, as it would be called here). The report of the MacLean Committee shows how the persistence with which the poor-law system has clung to obsolete forms of relief has so alienated public opinion that every new provision of Parliament for the abolition of poverty is carefully kept away from the blighting hands of the guardians. This, very naturally, has tended to make every contact with the poor law still more distasteful and humiliating to the people. It may be admitted, as the committee says, that there has been "popular prejudice" which "does less than justice to the devoted work of the guardians and to the improvement in poor law administration"; but if the floral decorations at their funeral are offerings of thankfulness rather than of grief, the reason lies in the obstinate

refusal of the guardians to give up voluntarily a place untenable in a modern democracy. There is probably no one in England today who regrets that old-age pensions are not dispensed by the guardians but by municipal committees, that school children are fed by local education authorities, that relief employment, when necessary, is provided by a city committee. But each of these measures in its turn has had to be fought for in opposition to the poor-law authorities.

#### Two New Branches of Government

WHILE the "union" was there, a sort of dump heap of society's outcasts, no sufficient motive existed for bringing order into the chaos of conflicting authority and overlapping provision by other public bodies. There were rival hospitals and asylums: clinical and institutional treatment lacked proper inter-relation; the health of infants and mothers was promoted by competing departments of government, each with its queue of devoted voluntary workers. There were two sets of schools for orphaned children, shops under at least two different public authorities where the unemployed laborer might apply for relief work, two kinds of pensions for which the aged might apply. A purely technical definition of "destitution" in many cases determined whether a given case was a suitable object of one or another form of aid: frequently the choice could not be determined by any definition at all and was quite arbitrary.

Linked to its destructive proposals, therefore, the committee brings forward constructive recommendations for systematizing and completing the great mass of public provision which has come into existence and for distributing among the different branches of local government the remaining functions of the dying poor law. There will be no more "workhouse," and there will be no more disenfranchised paupers. All provision for the sick and infirm will be made by the municipal or county health committee under the public health acts. All provision for children of school age, similarly, will be made by the local education committee, whether such provision be for institutional care, for boarding out or for attendance of special schools. All provision for feebleminded will be made by the asylums committees of the local councils, which also have charge of certified lunatics and all other persons of unsound mind.

Two new branches of local government are to be created: a home assistance committee, to dispense all out-relief and non-institutional services not otherwise provided for; and a prevention of unemployment and training committee, to take the place of the municipal distress committee appointed under the unemployed workmen act of 1905. These two additions to the machinery for the public welfare are of considerable interest as embodying new principles in public administration.

With the provision already made in England for organizing the labor market and for unemployment insurance see the article by John B. Andrews in the SURVEY for February 16), the new unemployment committees will have much less cope than was originally intended for the distress committees. At times of abnormal unemployment they will provide relief work; at all times they will act as the city's advisory committee on employment, endeavoring to keep the amount of public employment so far as possible at a ratio inverse to the private demand for labor in the locality. They will, further, provide wage-earners out of work with training facilities if by this means the period of unemployment may

be reduced or employment be made more continuous in the tuture. These committees more immediately will be charged, under the proposed plan, to cooperate with the labor exchanges in facilitating the return of discharged soldiers to suitable work and in assisting emigration.

The home assistance committee will be the coordinating agency of the community's public welfare activities, keeping a common register of all families benefiting by any form of public assistance. It will not have charge of any institutions but will assume the legal guardianship of orphans and deserted children. It will also act as a central clearinghouse to applicants for aid, who may either be given outdoor grants or be helped to admission in an appropriate institution maintained by one of the other branches of local government. This committee, since nearly all the "case-work" is done by the specializing community agencies, such as the education, health, lunacy, prevention of unemployment and old age committees, cannot be held to revive in a new form the old idea of a general poor law authority. It is supported from the same taxes as the other committees and subject to the same elected body of citizens. Thus, it will not be tempted to aggrandize its standing; it will not seek to hinder every movement for more specialized provision; nor will it, on the other hand, be likely to restrict its operations within too narrow limits. The home assistance committee would seem to combine the functions of a case clearing-house, such as the social service exchanges in the United States, and of a delegated national guardianship, comparable with that of the new offices départementals des pupilles de la patrie in France (see the Survey for October 6, 1917).

So much for the proposed new machinery. The effect of the project, if adopted, will be even more far-reaching than has been indicated. It must be remembered that the poor law, not only by its present defects but by its whole history and tradition, has been weighing down the forces of progress. The Local Government Board, administering it nationally, has clung with desperation to its authority over other functions of local government which logically had grown into other specialized departments, simply because it did not wish to remain saddled with so unpopular a governmental function as poor relief for its only or main ration d'itre. On the other hand, other administrative branches which logically belonged in the field of the Local Government Board, struggled firetely to keep out of it, so as not to be tainted by association with the national boxy.

#### Towards a Ministry of Health

WITH the redistribution of poor-law functions, probably inolving assumption of authority over local provision for the unemployed by the new Ministry of Labor and over local provision for dependent children by the Board of Education, the administration of the public health will be the chief remaining field of the Local Government Board. Thus the fusion of the health insurance administration with the nation's preventive activity in a ministry of health has been brought appreciably nearer.

In any case, the Reconstruction Ministry has proved with the present report that a time of national stress is not the least but the most opportune for bringing together opposing opinions on problems of social welfare and for the enactment by common agreement of epoch-making changes in the procsesses of government.

BIRKET POSTER, Pinet.

. WILLMORE. Scutpt

# Two Days in Venice

By Paul U. Kellogg

EDITOR OF THE SURVEY

HERE was another meeting that day in Venice that gripped me even harder, for in its associations it reached far back of our New England traditions of self-government to those of this ancient republic. In the afternoon we were invited to meet with the mayor and his five associates in an old palace on the Grand Canal, long used as the municipio. We had seats with them about a heavy carved table in their room adjoining the council chamber. We had tea together, expressions back and forth were exchanged through the consul's fluent Italian, and we came away each with a handsome volume issued at the time of the rebuilding of the Campanile as tokens of Venetian appreciation of the American fellowship our visit meant in this time of stress. These were not the first of such tokens. It seems that it was on April 2 of the revolutionary year of '48 that Venice first attempted to throw off the Austrian voke. She failed then, only to succeed twenty years later. So when the United States declared war on April 2 last, the city sent to the American consulate, in the hands of a veteran of both wars, an album for transmission to the White House. It bore this inscription:

APRIL 2. 1848-1917
The day honored in the history of Venice
America has made sacred in the history of the world

I recall the heavy, urn-shaped wooden vases which have been used time out of mind for taking the vote of the council; but beyond that I cannot bring to mind the furnishings of the room, other than the fixed impression of somberness and suspense it left with me. I may have been mistaken in assuming that, in some shreds of sentiment at least, on the sindaco and his associates has descended the mantle of that stern governing body, doge and Council of Ten, which steered the even course of republican Venice between the Byzantine and Franconian empires and sent her argosies throughout the known seas and beyond. But I could not have been mistaken in the sense of insecure tenure of the morrow which lay upon this little knot of sober, meager, middleaged men sitting there, waiting upon they knew not what. But we knew that they should remain at their posts, free city or captured or war-swept, as was the order and understanding of all these municipal officers of northern Italy.

Our next visit plunged us into another group of associations, maritime rather and civic. A municipal launch carried us to the arsenal, which preserves the remains of the

<sup>&</sup>lt;sup>3</sup>The first installment of this article was published in the Susyay for February 16. For two accompanying articles, Seven Weeks in Italy, see the Susyay for February 2 and 9,

Bucintoro, from which the doge was wont annually on Ascension Day to throw the ring with which he symbolically 'wedded the Adriatic." At the zenith of the republic, the Arsenal employed 16,000 workmen, but housed industry and craft no more strenuous or strange than those of this present war. In the yard we passed four antique lions, one of them bearing Runic inscriptions; and, according to the Baedeker, in the adjoining museum, which we did not enter, were trophies and Turkish banners taken at Friuli in 1472, at Corfu in 1537, at Lepanto in 1571; weapons, armor, culverins; all manner of baggage and spoils of the city's conquests, such as are to be found not only here, but adorning her own now threatened halls and churches. Many were brought from the very regions which now are again being fought over. For it must be remembered that Venice in her time dominated the Dalmatian coast (which is the goal of the present-day Italian expansionists); conquered Constantinople, and fought for possessions in the Levant. And not only has Venice had these relies of successful conquest, but also, before her, ever-present reminders of its reverse; for in the eastern lagoon "nothing remains but the legend of ruins to be seen beneath the waters" of Heraclea, which once surpassed the capital in importance. It was burned in the tenth century by the barbarians who came down the Piave in their coracles, And the ruins of a church which must have been nearly as big as St. Mark's, show the site of the rival city of Jesolo. By 1430, a contemporary wrote of it, "where the piazza once was, they sow corn,"

But it was neither of wars past nor present, history nor foreboding, that we called to pay our respects on the quierspoken admiral who commands the fleet of the north Adriatic. For no captain ever cared for his human cargo more sedulously in time of crisis than he had manifested in his practical concern for the refugees of the Venetian islands. Naval stores have been drawn on for rationing, and not only have thousands of people been taken out over the lagoons, but the machinery of many factories had been put on boast in the harbor, which were ready to go or be brought back to Venice as events developed.

#### A City Bombed and Shrunken

In 1911, Venice had a population of 160,000 people. This had diminished in the course of the war and dropped to less than half in the early days of the juvasion. On the basis of the number of trains which left loaded with voluntary refugees at their own expense. Consul Carroll estimated that fully 75,000 had gone away, in addition to those whom the government had assisted, by way of Chioggia. This left approximately 60,000 in the city. Only someone who knew Venice in normal times could have appreciated what this exodus had meant. I could only guess at it just as, in our trips down the canals or threading the narrow ways, we saw little outward evidence of the damage done by the air raids of the last two years. There was a small hole in the pavement at the door of St. Mark's, duly credited in iron lettering to an Austrian bomb. The famous horses were gone. We stopped at one point to enter the church of SS, Giovanni e Paolo to look up at the bare laths of its fallen ceiling, and note the sandbags piled around its pillars and the heavy hangings before its interior walls,

In the yard outside the bags were being removed from the cquestrian statuc of Bartolomeo Colleoni, called by Ruskin the "most glorious work of sculpture existing in the world," and men were at work on scaffolds, crating it for shipment to safety. Much that was portable was gone from St. Mark's, there were props and joists and barricades of bags; but the

wondrous mosaics of the domes and ceilings were as immovable or as impermanent as the whole fabric of the city. of which they are the crowning glory. On the streets life, though dwindled, seemed to a stranger's eves to be going on about as usual. The shops for tourists were mostly closed, as they perhaps had been for months past, but those which ministered to every-day wants were open. I recall chestnuts roasting outside one, a plucked turkey hanging in a window, the piled green of island boats laden with vegetables alongside the market, the pigeons in St. Mark's Place, Perhaps, in the absence of tourists, they were again being fed at public expense, as they had been down to the close of the republic, Women stopped to gossin on the bridges, and boys were pitching pennies under the arches of the doge's palace. Only a familiar of the town could have appreciated the lapse of customary manifestations of her ways of life-such as the thick smoke from pitch-pots in the building yards for her gondolas, the orange and red sails of her fishers, the streamers of smoke from her glass furnaces, the rose and faded blue shirts of her pile workers, or the trains of priests and people making their way along the fondamenta of some small canal on a visit to the parish shrines, or the serenades and regattes of her water-borne festas,

But of more prosaic factors in the change which had come upon the city we had testimony. For the most part, the Venetian workers are normally engaged in lace-making and glassmaking. The falling off in tourists early in the war crippled the retail specialty shops, and threw out of employment much of that varied service bound up in the hotel business. fishers, shut off from the Adriatic, and the gondoliers had both suffered. All this, and the leaving of the young men for army and navy, had given occasion for those works of relief and employment to supplement family incomes carried out by the Comittato Civile which I have already described. But so far as the two prime industries went, tourist purchases in Venice, after all, absorb but an insignificant part of the output in lace and glass. The lace sales in 1915, for example, were double those in 1914, which were in turn an increase over those of the year before the war. The sales in 1916 were double those in 1915, and the months of 1917 before the invasion had made new records. Sales in America had been a big element in this showing, and the activity of the American consul a big element in those sales. Various forms of military contract work sprang up, the arsenal workshops became centers of activity, and a war-time equilibrium was reached in the economic life of Venice very different from that of normal times, but sufficing,

This equilibrium was shattered by the invasion. The sudden rush of thousands of the better-to-do people from the city meant the closing of many shops and consequent unemployment. But that was only the beginning. We were told that the electric light and power works up in the hills of the mainland had fallen into the hands of the Austrians, and thus the power was shut off. If they were to advance much further, it was said, they would also get the sources of water supply, and Venice has only a few artesian wells. Moreover, in recent years, most households, even of the poorer people, have become dependent upon gas for cooking, and the gas supply is dependent on coal from the outside. Venice has never been a self-sustaining community in the matter of food supplies. As the saying goes, she has bought by the handful and sold by the thimbleful. The city never has had large stores. The source of much food was the upper Veneto, where, even in districts uninvaded, agriculture and farm work had been made difficult by shell-fire. The railroad which serves Venice runs for the whole length of the province parallel to and very close to the line of battle; a coup de main might cut it; it had become subject to aeroplane attacks and, in any case, this line was given over to army use. The city can with difficulty be fed from the sea, because fishing is paralyzed and there is no merchant vessel service. These were some of the factors in the situation of which various people told us.

#### The People Moved in Industrial Groups

ON SUCH a tenure, manufacturing establishments were quick to seck other plants, taking, in many cases, their machinery and workers with them. Private factories doing government contract work in clothing, boots and shoes went to various cities in Tuscany. The American lace dealers—the chief buyers—went to Florence. A great deal of the lace-making is done in the people's homes, so that the industry can make shift wherever the people go if thread and applique's go with them; and the extent of this voluntary shifting of population to Florence is reflected in the fact that a Venetian newspaper is now published there. By early December, I have since been informed, nine-tenths of the industrial plants and two-thirds of the stores of Venice were closed.

As each plant shut down, each store closed, the number of dependents had increased, and as the latter could only stay if the government or philanthropic bodies fed them and could only go if the means were provided, the responsibility on these agencies for working out a consistent policy was clear. They were confronted with the civic problem of a city whose normal life had come to a dead center. Of the alternatives before them, I cannot do better than quote from a memorandum before me, prepared in mid-December for the Red Cross by Consul Carroll:

The news from the front, while encouraging from a militury standpoint in that it always affords the gonishility of a further restandpoint, is not escouraging from an economic standpoint in the restand of the standpoint in the encouraging from a contouring the electronic transposition of the encouraging the electronic transposition and the encouraging where the banks have ceased to function, where the wealthy have gone away, and where manufacturing and merchandising enterprises can only be continued at a risk (too heavy for Insurance) of losing tock and plant.

Many people who have always belonged to the self-sustaining classes are already in actual want. It is strongly indicated that within one month's time there will be forty thousand people who will need to be helped, and who will not be able to find work here.

There are only three possible alternatives:

To take care of them here.

To take care of them elsewhere.

To let them be gradually driven out by need to wander about seeking in already overcrowded communities a help that will be increasingly harder for the unaided individual to obtain.

If we take care of them here it must be taken into consideration

that they already have shelter here; most of them have belongings enough to give them some degree of comfort; and the cost of transportation, the disagreeable trip in winter weather, and the pang of a breaking old associations and seeking new homes would be avoided. All the force of inertia is in favor of keeping them here. Many of them want to stay at present as they cling to their homes.

them want to say at present as true, runs, or taster nomes...

The initial expense of taking care of them here would be less than it would be to move them. This expense would constantly the control of any economic return. It will cost to fred those who must be fed as free kine easy one lite per person per day to give them one good mad. Such help as could be given, even if it were sustaining, would not be satisfying, and discontent would find expression sooner or later in riots... I have learned that the number of daily rations are the control of the contr

If the people are taken elsewhere there must be considered:

Finding the place where they are needed or where they can be utilized in whole or in part; transplanting them there; feeding them en route; establishing them in the new homes and assiring in taking care of them in the initial periods until they can become self-supporting.

In view of the great number of refugees, it seems to me that the one impossible task would be to undertask to support all the unemployed as a result of the war (whether they are refugees or not) unless we are able to find an economic use for their time and labor. It would be equally unconomic waste to employ those capable of in the coarser and less well paid forms of labor where only a scant living for them would be the return.

There is a certain amount of unavoidable dead weight, such as the sick and the old and the babie; but nothing should be undertaken that involves the continued support of healthy persons, men or women, in idleness. It is just that fundamental fact that makes the colony idea the only remedy for the situation. Italy can readily use the lisbor of every hand if we can get it to the point of contact with the demand; and once that contact is entablished it passes from assurate solution of refugees already, so that very few communities have any capacity to absorb any new quantities unless preparation is made to receive them and to put them to work on arrival.

To move them in colonies, you get the advantage of having classes of organized labor available among which the community units available and so when the community units need not be destroyed. The cost of caring for them is a decreasing once it is merely bridging the crisis. The separation of families and relatives is avoided, and the ceaseless searching for loss refugeate illiminated, that search which forms so many harrowing pages in the daily press as present.

When the time is ripe, the colonies can be retransported to Venice, if conditions justify it; whereas, if they were sown broadcast over the face of Italy they could with the greatest difficulty be regathered.

The third alternatives of letting the people be gradually driven out by hunger and the impossibility of obtaining the necessary work here to support life is a plan that nobody would avowedly adopt, but as a condition it may arise, due to the delays in putting the other alternatives into execution.

Mr. Carroll's memorandum is by all odds the best exposition I have seen of the program of orderly migration insti-

FROM THE DIPLOMA OF MERIT ISSUED BY THE VENTCE COMMITTEE OF CIVIL AID AND DEFENSE

tuted in Venice, in contrast to the promiscuous transport such as, all but inevitably, marked the first rush of refugees down the mainland in the weeks following the invasion. It is quoted here on that account, rather than as an argument for the wholesale civilian evacuation of Venice, the latter being a question of policy which will have been decided one way or another by military events, or, as indicated, quite apart from those events, long before this article reaches America-a decision, of course, which fell wholly outside the province of the American Red Cross, Practical reasons, which need not be gone into here, could be advanced in support of the contrary policy-that of encouraging all non-combatants to remain in their homes whatever befalls, which was adopted by the government in November for the inland war zoneeven in its application to Venice. But the island city, as we have seen, confronted an exceptional situation in its economic isolation; and, moreover, for the sake of the people themselves no less than to remove an element of weakness, those concerned in the defense of Venice are credited with support of the plan for colonization.

#### A Parish Cross-Section

CONDITIONS which gave it force were reported by Sacerdote Silvio Mason, priest of the parish of Santa Euphemia, which comprises the Giudecca island, a section of the city inhabited almost exclusively by poorer people. In normal times, 7,000 souls (900 families) make up this parish. Of these, 1,000 had been called to the colors as soldiers. They left behind them 500 families who received the military allotment, but that was not enough to support them under existing conditions. The other 400 families, made up of older men, women and children, had only what they could earn. Normally, the parish folk of Santa Euphemia's are factory workers, but only two of the factories on the island were still in operation in early December, a flour mill and a cement factory, both working with greatly diminished forces. In the exodus from Venice in November, only about 200 people left this island; there was no prospect of the resumption of the factories. and every prospect that within a short time from 4,000 to 5,000 people would have to be rationed unless they were transplanted to some locality where their skill as factory workers might be employed.

Conditions in some of the suburban island settlements were not different. Early in December, Consul Carroll went by the little steamer to Burano and Tre Porti. He found very few people left at Tre Porti, which is the last station on the line, as it is at the nearby station of Gavazuccherina that the trenches come down to the sea. But at Burano there were ten thousand-all the civilians, in fact, except about twenty workers belonging to the Bardwil Lace School, an American undertaking, who had been moved to Florence. Two hundred and fifty skilled lace-workers in Burano point, Venetian point and filet lace were quite idle, but capable of becoming a self-sustaining unit if transplanted and guaranteed work. The fishing population was able to maintain a scanty existence. For some time the town had been in darkness, as the electric lights had been removed and the wires taken elsewhere. There was no gas, but wood was still to be had for cooking and fuel. For three days there had been no bread, although there was plenty of corn; the only mill had been operated by an electric motor, and the shutting off of the electricity had put it out of commission. A free kitchen had been opened the week before, which was supplying a meal a day to 600 lace-workers and their families, and for this Mr. Carroll left 1,000 lire from his Red Cross fund with the president of the local Comitato Civile.

Virginia Lee Welch, an American magazine writer, for many years a visitor to Venice, who has been serving Mr. Carroll as a volunteer, visited Murano, where she found the priest of the parish in charge at the Comitato Civile. He stated that while all of the well-to-do people had left the island, some six thousand of the less well-to-do remained. two-thirds of whom must have food supplied them in two weeks. One thousand soldiers are in the field, and their families got the small government allowance, but the rest were people out of employment. The glass-workers could no longer work for lack of chemicals and coal. The workers in beads were unemployed because there was no glass. Fishing has been suspended, and the only occupation was the lacemaking of about 100 girls, "If invasion comes," added Mrs. Welch, "the priest is to head his people in retreating by boat to Chioggia, leaving one old priest to care for the sick, feeble and dving in some home."

That last is a touch which might have its more colorful application in the greater community. There are about 400 gondoliers in Venice, still organized in their medieval guilds, ealled tragettes. The members have certain privileges, such as the right to stand at important ferries. Then there are the sandoliers, who row the smaller boats without the curved mace-like prows, and the barcat, who manage the large barges. These water-crafts men were not excluded from the scheme of communal exodus, as Consul Carroll viewed it. "The gondoliers ought to be the last ones to go from Venice," he said, "taking their boats with them."

To judge by reports, the population of Venice may be said to have remained stationary from the time of our visit in mid-November till the end of December, the time this is written; that is, at approximately sixty thousand people. Several thousand of the better-to-do people, who had gone out of their own volition in the first rush, returned, presumably to wind up business and remove property, although there was clearly division of sentiment as to the course for the city and its people to pursue. My information is that a few stores reopened; others prepared to close. Practically no merchant was restocking with goods; many were making every effort to dispose of their stocks as a preliminary to seeking other locations. So far as the poorer folk were concerned, they may be presumed to have continued of the same mind that they had from the beginning. Few of them had ever gone because they wanted to go, or because they were afraid; they had gone because the bottom had dropped out of their existence, and that was the only thing open to them. The very home-loving quality that will be an asset in the period of resumption of normal life and bring her people back to Venice, made it difficult to temporarily uproot them. No migrations in large companies were attempted in December, although plans for mass movements of the tobacco-workers and glassworkers were under active discussion, and a pretty constant stream of small groups, of twenty-five or less at a time, joined the earlier colonists on the Adriatic coast.

Meanwhile, Consul Carroll, acting in behalf of the American Red Cross Emergency Commission in Rome, carried forward such inspections of conditions as those cited; opened a Red Cross kitchen in Venice which at Christmas time was feeding 700 people a day; distributed relief through parish priests; gathered Red Cross supplies at the Chioggia canteen to serve the orderly migration whenever it was resumed, or to meet any emergency; and cooperated with the Comitator Civile in everything from purchasing machines and stowes wholesale for the Adriatic colonists, to looking up sites for new colonies in Liguria.

At the same time the municipal, federal and provincial

authorities cooperating, buildings had been requisitioned and other preparations made for the absorption of an additional twenty thousand refugees in the neighborhood of Rimini. And the Comitato Civile had gone ahead in organizing the economic life of the 20,000 colonists already along the coast, installed equipment, gotten materials and opened its work-rooms; and the American Red Cross had joined in this industrial work, opened district headquarters at Rimini and was already caring for patients in its hospital. But these things have to do with the "new Venice" rather than the old.

We left Venice on an admiralty launch, steering into a gorgeous sunset. Yet neither that nor the crowded impressions of two days which I have tried to set down, left so lasting a picture as the St, Mark's Place as I had seen it the night before. We had been in conference all the evening and had climbed lofty staircases, stripped of rugs and hangings. The curtains were drawn. Venetian blinds and shutters closed. Venice means to be dark these nights. I fumbled with them in the dark until I could look out across the water. moon, in its first quarter, was on a level with the roofs at my right. Here and there green lights showed dim along the quay. The island churches stood in grey outline, their details washed out, but all the more unreal and oriental. It was too wonderful to turn in. I clattered down the empty stair-well of the old palace, turned hotel and, the ancient night clerk giving leave, pushed through a heavy hanging that shut in the entry. The moon shone down the length of the quay. Along it were tethered gondolas, their noses in. There was a knot of a dozen soldiers in front of the old prison next door, evidently about to go out on a fresh watch. I had just climbed what is known as the "Bridge of Straw" and reached the white-tiled front of the Palace of the Doges, when a clock began striking midnight. I imagined it came from St. Mark's Place, and I hurried in the hope of seeing the last blows of the bronze giants who strike the hours on the famous clock tower. Too late, and an abashing pounding by my own heels was all I got for the run. But just then the bells in the island churches I had looked out upon echoed the strokes, and other bell towers in different parts of the city broke in upon these. The sound was one I was unused to -the sound of bells across water-or across low fields, as I remember hearing them once near Oxford.

The Campanile lifted straight, a great bayonet with grooved sides, the moon shining through between it and the Royal Palace, St. Mark's was dull and half-shadowy. The piazza was deserted. I could hear footsteps back by the quay and other footsteps in one of the passageways on the far side. But I was quite alone as I crossed it, with a sense of undeserved experience, like groping with thumby fingers over the strings of a musical justrument you cannot play. And in truth, the shafts and arches of the buildings which close in three sides, looked in the half-light like long ranges of organ pipes. If I could only touch them and bring back other midnights in this empty square! Such sense as I had of the historic scenes that had gone forward here was just beyond the limit of consciousness, boxed up like St. Mark's with sandbags piled high around its entrance. Nor could I bring back any of the hundreds on hundreds of gay scenes which must have strutted and caracoled across the pavement, though the designs of its marble blocks stood out never so clearly in the moonlight. I could only grope at things and wonder if I were one of the very few to see St, Mark's place alone, at midnight-one of the last to see it at all. And at that, I stared till I was like to have become sand blind, like Old Gobbo, and to about as much purpose. The thing that

was real to me was of a very different sort-an altogether unhistoric bit of iconoclasm. Byron, Ruskin, Turner, Howells, Hopkinson Smith and the rest of the great interpreters who had been here, were rich in all this imagery of the past that escaped me. But how downright unconscious they had been of what the future held for this old square and the city about it -yesterday and today and this midnight, for example. And here was Venice meeting that future, not with trappings and blazonry, but with most of her well-to-do people gone; with fifteen thousand families of the poor fed by soup kitchens; with secretaries and professors and all manner of unheroic. obscure folk knuckling down to the job to be done-getting sewing machines out of pawn, and pants-stitchers off by the ferry, with their belongings in a gunny sack, finding lost families, and bothering about the blind and the lame and the halt. Sails and flags and banners-none of these, but a homely, ingrained courage that bore the weight of days that grew heavier. No, Venice was unhistoric in the midst of new history. But perhaps that is the way that history is woven. Only afterward can you see the texture.

I went the length of the square, through an arcade with a single green gas lamp, through streets like corridors, with dark hallways that made me conscious of them and feel kindly toward some footsteps; and then out upon a little space where there was a bridge beneath the jagged outline of a narrow street. And down it, two or three colored lights and the moon.

#### When Venice Went to the Help of France

THE moon had set by the time I got back, with echoing footstens, to St. Mark's Place. The outlines of things were dimmer. The bevelled sides of the Campanile, graceful, farreaching, were more impressive than the new bricks had been in the afternoon. It was old again. And then out past the columns bearing the ancient figures of the Lion of St. Mark and St. Theodore standing on his crocodile. I went to the waterfront and looked back, noting inconsequentially that just there the lion's tail in silhouette touched the edge of the Campanile. But those two straight columns, standing there with their battered old symbols of the patron saints of the town in whose names her townsmen had fought and had befriended, gave me a better grip on the olden days than I had had before. More, gave me a feeling of permanence-something to take the place of the discussions as to whether Venice was likely to be enemy-shelled or self-fired-a sense of time to mellow hates and show struggle and ambition in proportion-of trends in human affairs measured by centuries, These had survived because people prized them. Sandbags were not the only things between what mattered and ruin, Human nature had reserves, one generation after another, one race after another. It had gone ahead building its structure of civilization on piles that held even in the marshes of uncertainty and conflict.

It was only afterward that I learned that the two shafts had been brought back by Doge Michiel when, in 1117, the Venetians had successfully gone to the succor of the French crusaders in Jerusalem. And, such had been the swing of the centuries, that week, out on the Paise, the French ado come to the succor of Venice; that month, after eight hundred years, Jerusalem had been wrested once again, this time by the English, from its Turkish conquerors.

And back in the siege of that early time, when Tyre fell, also a "Queen of the Sea" and also known for her works in glass and in purple, the persons and property of her people had been respected by Doge Michiel and the Venetians.

## Book Reviews

TOWARDS INDUSTRIAL FREEDOM

By Edward Carpenter. Charles Scribner's Sons. 224 pp. Price \$1.50; by mail of the SURVEY, \$1.60.

"If any enthusiast today," says Edward Carpenter in his book, Towards Industrial Freedom, "were to descend into one of our big towns and, standing at a street corner, to preach to the passers-by about the 'pleasure of work' . . the crowd. I fear, putting their

thumbs to their noses, would break out in scornful laughter."

It is modern business with its infernal doctrine of "industry for profit" instead of "industry for use," the author explains, that has made even the mere idea of pleasure in toil seem a ghastly joke. The worker has been robbed of the thing that gives joy to work by the destruction of craftsmanship. There has come such a dread monotony over life and conditions of work have become so unbearable that "to thousands, one may say millions, this war (even with all its horrors) has been a relief and an escape. . . It has meant to so many life in the open air, it has meant health. good food, a common cause, comradeship with others, and a dozen positive things, instead of the inhuman monotonies and negations of a life of slave labor under the heel of commercialism."

In the first three essays in the collection, The Transformation of Our Industrial System, Industry as an Art. and Beauty in Everyday Life, the author gives what is, in many respects, an admirable statement of some uncivilizing tendencies in industry. Seldom has there been set forth more clearly the shameful social waste, the mad folly of a system of industry that makes it impossible for men to use or develop their instincts of artisanship, or of artistry, if you prefer; for all people, the author truly says, "who desire to express themselves, to create something of their own . . . are true artists."

The unfortunate thing is that, sound and true as are many of his basic ideas, the author constantly overreaches himself. The unadorned facts are amply sufficient to maintain his thesis that industry should be reshaped with a view to human development; his cause is only weakened by such a passage as this; "You may walk the streets of our great cities, but you will hear no one singing
-except for coppers; hardly a plowboy
whistles today in the furrow, and in almost every factory [and here the author
interpolates parenthetically as if aware
of his hyperbole, 'this is a fact,'] if a
workman sang at his work he would be
'sched.''

As a matter of fact, there is no better evidence anywhere of the sheer indestructibility of good spirits than the light-heartedness often found in the most wretched of surroundings. Every social investigator can recall dozens of cases where he has felt resentful over the shameless good nature of some exploited and overworked factory hand, who just would not be properly dissatisfied!

The several chapters are made up of various addresses and essays written by the author at different times. Too much consistency should not, therefore, be required. It does seem a trifle too much, however, to liave to accept the author's inclusive condemnation of government and all of its institutions, forms and acts, in one chapter, and in another his extensive program of industrial reform, which could not possibly come into extensive or general application without the aid of legislation.

A chapter on Social and Political Life in China, which ends the volume, leaves one mildly in doubt regarding the extent to which the author would substitute for western customs the social and industrial life of the Orient.

JOHN A. FITCH.

THE NORTH AMERICAN IDEA

By James A. MacDonald, L.L.D. Fleming H, Revell Company. 240 pp. Price \$1.25; by mail of the Survey \$1.35.

A book that must be heard to be appreciated. Reading the eloquent periods in which the author has set forth the splendor of the "North American Idea" of "the inalienable and priceless right of a free people to govern themselves" is like viewing the glories of the rainbow in a prism. Editor though he is by profession, Dr. Mac-Donald is by the grace of God an orator-every inch of him. Perhaps it was the exigencies of the Cole lectureship of Vanderbilt University which drew forth these winged words, that led to their imprisonment in cold type. But if the book, as a book, has few merits, the writer of it has many.

Especially worthy of commendation is the courage of his defense of the Tories in the revolution and his sane and generous attitude toward the enemy in the world war. There must be no thought of excluding the Teutonic powers from the league of nations which shall succeed to the anarchy of the old international system. "No people can have security unless all peoples have security. No people can be wholly free curity. No people can be wholly free

unless all peoples are free." Neither may there be any spirit of hatred or revenge in the final settlement. "In the sight of the bereavement of the world the idea of further punishment will fade away. Neither on reward nor on punishment can a civilization so ruined be restored. There can be only one punishment that counts, the visitation of sorrow already so awful in its universality; only one reward worth while, the better reconstruction of the world."

These are brave as well as wise words of the Canadian preacher-editor, which put to shame more than one preacher and editor nearer home.

GEORGE W. KIRCHWEY.

FIFTY YEARS OF AMERICAN EDUCATION

By Ernest Carroll Moore. Ginn & Co. 96 pp. Price \$.80; by mail of the SURVEY \$.86.

One of the best things that could happen to American education would be for every one who is in any way concerned with it to spend the necessary hours right now doing what Professor Moore has done in writing this brochure. Peace may be near or far, but it will come, and there is danger that it will find educators unprepared. Doubtless they will have plenty of the reconstructive spirit, but they may not have thought through the new forces that education after the war will have the liberating ideas that it will have to interpret and keep abreast of, and the enlarged view of world needs and human relationships that will demand some form of expression in the schools.

In our own Civil War we faced a similar condition. Those all-absorbing questions of slavery and a disunion interrupted one of the most active periods of educational expansion in our history, and at the end men's minds had to grope their way back again to the old purposes and refashion these in the light of a new national unity and a more embracing singleness of goal. How quickly they did this is shown by the prompt passage by Congress of the act of 1867, creating for the first time a national department of education that committed the government to the promotion of efficient schools throughout the country.

At the end of the present war we shall find larger questions than these to be answered. Nationalism, with all of its faults and virtures, its explosive as well as cementing possibilities, will demand to be reconsidered. Patriotism will insist upon standing for friendship, not for enmity. History will reveal new high lights, and much that has been submerged in historical teaching will now be brought to the fore. Civics will become broader in scope and will strike deeper at the roots of political functioning. Organization as a word, will be even more powerful than before.

New values will be discovered in industry, new applications in the use of science. There will be a general quickening in the processes of commerce, technical skill will be more highly valued than before, and the faults of waste and extravagance will be more glaring. Certain professions, such as public health and preventive medicine. will receive added dignity from the successes they have attained in war. Consumers will probably be discovered to have more rights, producers more obligations. We may even learn, before the lessons of the war are quite obserlete, that literature and the arts, especially painting and music, are quite worthy of modes of study and conservation not heretofore granted them, that appreciation alone is a constructive force, and that while Nature may reserve the right of making artists, man can at least pay her the compliment of making audiences and spectators.

These are some of the raw materials that education will have to battle with, to deal with. What better way of preparing to master them than by spending a few calm hours or days right now going over the past, noting its trend and failures and catching the spirit of its successes? Professor Moore has done this only in part. He has written briefly, with little thought of analyzing his great array of facts. Indeed, the occasion for his writing was not educational at all, but to celebrate the fiftieth anniversary of Ginn and Company, publishers of many text books. Nevertheless, his treatment suggests the consecutiveness of educational development. and while it horders on the encyclopedic in its style of presentation, it may well inspire the reader with a desire to look elsewhere for causes. If it does so and thus clears the air for a surer grappline with what is in store for the nation, no one will question the value of its service

WINTHROP D. LANE.

WAR SHOCK

By M. D. Eder, M.D., R.A.M.C. P. Blakiston's Sons & Company. 154 pp. Price \$1.75; by mail of the Survey \$1.87.

The place of this volume in the socially-minded person's library is among his books of rather special reference. "It offends the scientifically trained mind," says Dr. Eder in his preface, "to read as I did today: 'A soldier who became dumb two years ago after an explosion suddenly recovered his speech at a cinematograph show." Not, apparently, that the cinematograph show is blameworthy for the event, but it is not necessary, as the book continues, that a soldier's cure should have to depend upon a chance stimulation of his emotions at so long an interval after his injury. It is possible to reduce this period of suffering to a few days or even

at times to a few minutes. And one hundred examples of such prompt and successful relief form the content of this

In relation to such volumes as that by Dr. Elliott-Smith (reviewed in the SURVEY for November 17, 1917) Dr. Eder's book might be said to indicate the technique by which some of the results told briefly in that volume are to be achieved. It embroiders the theme maintained in many recent discussions—that shell shock is only another form of expression for symptoms common in civil life.

Dr. Eder is in charge of the psychoneurological department of the British army at Malta. The larger number of the cases which he describes were those sent to his department at this place. A few came into the wards of which he had charge during the Gallipoli campaign. All are cases of psycho-neurosis; he excludes psychoses. Details of the analysis and treatment are of the type more or less familiar now to readers of

Freud, Brill or Jung. But in addition to psychotherapy there is also a physiological re-education. used when paralysis of the speech organs was present. Suggestion with or without hypnosis was, says Dr. Eder, the most fruitful method of treatment. After a cure is complete, the man should not at once be returned to active service, though after a few weeks of change of scene the man usually desired to be so returned. Further, Dr. Eder strongly urges that no patient should be discharged from the army until he is entirely cured. To send men back into civil life before they are well or some arrangement is made for a good position for them, practically assures their serious and permanent handicap. Suitable employment must be assured them before they are let go,-this, for their own sakes as well as for family and society.

From every point of view, says Dr. Eder in closing, early and adequate treatment for these men is imperative. Many a patient dismissed uncured sinks into chronic invalidism and becomes a misery to himself and to his family. It is at this point in any country that the best efforts of military authorities touch those of worst service, medical and social, in the civilian field.

GERTRUDE SEYMOUR.

DEMOCRACY AFTER THE WAR

By J. A. Hobson. Macmillan Company. 215 pp. Price \$1.25; by mail of the SURVEY \$1.33.

The world over, those who can see below the surface may sense the division of forces which, the most formidable armies the world has yet seen, will front each other in the war after the waron the one side a narrow nationalism aiming at security for property and vested rights and armed with all the authority of tradition; on the other internationalism, democracy and social justice.

Mr. Holsion presents his forecast of this mighty battle with the aid of initmate and accurate knowledge such as few men possess. The first part of his book, picturing the forces which are lined up against democracy, brings little that is new; but in the second part, The Defence of Democracy, he draws a program, which is at once a challenge and a prophes.

Political and economic inequality, he shows, form a vicious circle from which escape seems impossible. The chief danger of the period upon which the world is now entering lies in the emergence of pseudo-democratic movements, which if successful, would only fasten the yoke of dependency the more firmly upon the people.

Space does not permit to follow here his argument more than in briefest outline. The new nationalist plan of social organization will be hedged in by a veiled imperialism, by protectionism linked to state guarantee of minimum earnings (he calls this the Prussian-Australian program), by militarism in the name of self-defense, by legalism, bureaucracy, "regulative socialism" the control of railways, mines and basic industries, by an increased authoritarianism in church, school and press under the guise of patriotism. It will be fortified by social legislation and by a sham representation of "labor" in a government becoming more and more absolute and unrepresentative

The defense of democracy, he contends, consists first and foremost in a welding of particularist movements for various practical reforms and ideals of social organization. Its weakest point is the disunion of the economic and the political formulas of progress: on the one side a rigid state socialism, on the other the syndicalist aversion to all participation in the political struggle. The idea of an industrial state controlled by representative committees of labor and capital within the political state in which the workers take no interest, an idea "bred of political despair," cannot but lead to a complete domination of capitalist interests.

Mr. Holsson's outlook is frankly pessimistic. There is no sign as yet among the people of a leadership which will accept the new conditions brought about by the political and economic upheaval of the war. "The poverty of the poor and the wealth of the rich conspire to make democracy impossible;" not intellectual inferiority but lack of opportunity to be well informed, to act unitedly, to translate sentiment into action, a conservative clinging to antiquated methods of defense under the stress of constant fear, the hold of the powers above on the educational system -these and other conditions have weakened the defense.

The author believes in evolutionary processes of social betermment. He visualizes more clearly than any other contemporary writer the main direction of the road along which humanity must progress towards emancipation from tyranny in every form. But he leaves the reader in doubt whether, after all, Marx was not a true prophet and the world has yet to pass through a catastrophe of social institutions even greater.

BRUNO LASKER.

ALSACE-LORRAINE

By Daniel Blumenthal, 60 pp. G. P. Putnam's Sons. Price \$.75; by mail of the SURVEY \$.80.

Mr. Blumenthal enjoys the distinction not only of having been the elected mayor of the city of Colmar in Alsace for nine years and of having served both in the Senate of Alsace-Lorraine and as a a member of the Reichstage but also, we are told in a preface by Prof. Douglas Wilson Johnson, of having been condemned to death eight times and of carrying sentences aggregating more than five hundred years of penal servitude.

These honors have not, however, damped his spirit. Like Pierre de Lanux, in his recent book, he asserts that France would never have undertaken, and Absuc-Lorraine never have demanded, a war of revenge to secure the return of these provinces. It is since the beginning of the war that their fate has become a crucial problem of world politics. He depends upon America to throw the whole weight of her influence into the reunion of the provinces with France.

No possible alternative solution is discussed or even mentioned by the author. Like many writers on this subject, he does not keep sufficiently apart the evidence of the revolutionary sentiment against the imperial yoke from that of a real and complete attachment to France. There can be no question at all as regards the former, since it is overwhelmingly strong. On the latter, the author is not quite so convincing.

What answer has Mr. Blumenthal to the suggestion, now more and more widely discussed, that the creation of an independent republic, with the inclusion perhaps of Luxembourg, has an even greater promise than reunion for lasting peace and for a lasting justice to his countrymen? He says they are "very practical men" as well as, idealists. Ethnically and historically, Alsace-Lorraine offers a unique contribution to the family of nations. It has a language of its own and has developed a national consciousness in the common fate and aspiration of its people.

B. L.

#### FOR A CONSTRUCTIVE LAW ON IMMIGRATION

RGANIZATIONS interested in the welfare of immigrants and students of general problems of immigration have felt for some time that there is need for a joint effort to revise the immigration legislation of this country so as to correlate the existing incomplete, disconnected and piecemeal laws and methods.

A group of men, including John Collier, Franklin H. Giddings, W. W. Husband, Hamilton Holt, Jeremiah W. Jenks, George Kennan, Herbert Parsons, Charles Stelzle, Charles R. Towson and Sidney L. Gulick, has been studying these interrelated problems, striving to work out a sound and systematic policy. They have adopted the following principles as a basis for further discussion:

- I. The United States should so regulate and, where necessary, restrict immigration as to provide that only so many immigrants of each race or people may be admitted as can be wholesomely Americanized.
- 2 The number of those individuals of each race or people already in the United States who have become Americanized affurther immigration of that people.
- 3. American standards of living should be protected from the dangerous economie competition of immigrants, whether from Europe or from Asia.
- 4. Such provisions for the care of aliens residing among us should be made as will promote their rapid and genuine Americanization and thus maintain intact our democratic institutions and national unity.
- 5. The federal government should be enpowered by Congress to protect the lives and property of aliens.
- 6. All legislation dealing with immigration and with resident aliens should be based on justice and good will as well as on eco-nomic and political considerations.

They agree that the regulation of the rate of immigration need not be on any arbitrary or uncertain basis, but should be on that of a definite maximum percentage of annual immigration from any people already represented in this population as naturalized citizens and as American-born children of immigrants of that people. The establishment is advocated of a federal bureau for the registration of aliens and the maintenance of a continuous register of all immigrants until they have qualified to become American citizens.

In addition to the federal bureau for the distribution of immigrants which, in this plan, is to be provided with increased appropriations for a larger and more effective activity, there is to be a federal bureau for the education of aliens for American citizenship, for the purpose of promoting the establishment of suitable schools where needed by means of subsidies to local educational authorities. Support is given, further, to the pro-posal for a bill that would enable the federal government rather than the states to exercise immediate jurisdiction in any case involving the protection of and justice to aliens, a function which devolves upon the federal government under a number of treaties, but which it has as yet neither legal power nor machinery to fulfill. Graduation from schools for citizenship, it is suggested, and continuous registration for the required period of residence, should be made obligatory qualifications for naturalization. These proposals are not put forward either as final or as completely meeting all legislative needs.

Sidney L. Gulick (105 East 22 street, New York city), secretary of this group, would be glad to send further information to readers of the SURVEY and to receive correspondence whether in the shape of endorsement or of discussion of

the proposals named.

Eshenary 23 1918 Vol. 39, No. 21 THE SURVEY Published Weekly by SURVEY ASSOCIATES, INC. 112 East 19 street, New York

#### HOW WORKINGMEN FARE AT WASHINGTON

F ANYONE has any doubts about the new power and influence of labor in the affairs of state, he ought to spend a few days in Washington, Recently a visitor at the nation's capital dropped in at the Department of Labor building, Outside the office of Secretary Wilson, standing in the hall, he passed a group of men. Inside, waiting in the anteroom, was another group. The men inside, he learned, were the president and secretary of the Chicago Federation of Labor, and a delegation from the union employed in the Chicago packing houses,

Who are the fellows out in the hall?" asked the traveler. "Oh, they are packers," someone told him, "Armour and Swift and Cudahy, you know."

There they were-the representatives of the men inside, the millionaires outside, and all awaiting the pleasure of William B. Wilson, coal miner and Secretary of Labor. Later, when Mr. Wilson invited both groups into his office, the responsible heads of the packing industry of the United States met face to face the representatives of their employes for the first time in fourteen years.

The traveler looked on these wonders and then went out and caught a car in the direction of the office building occupied by the American Federation of Labor. The man he wanted to see of Labor. The man he wanted to see there gets \$2,500 a year for guiding the destinies of a union with a membership of 100,000. He arrived just in time to hear the labor leader explain to two employers who were waiting that he could not see them. He had barely time then to reach Secretary McAdoo's office to keep an appointment. Another labor official, for whom inquiry was made, was over at the capitol appearing before a committee of Congress. A third was just leaving for a conference with a government official,

Wandering back toward the White House end of Pennsylvania avenue, the traveler stopped at the offices of the Committee on Public Information. They were just giving out the report of the were de night of the night of t

world."

These are but the outward and visible signs of change. It need not be "so-cialism" or "Bolshevism"—Andrew Carnegie used to like to talk that way, too, both before and after unionism had been wrecked at Homestead, and Mr. Schwab is an apt pupil—but it is a change in the direction of greater influence on the part of labor and greater power in the afford labor and greater power in the afford is a change in the direction of greater influence on the part of labor and greater power in the afford.

be the man who will dominate the

fairs of the nation.

There are two ways in which this new influence is now making itself manifest in Washington. One is the calling of labor leaders into consultation with government officials over matters of importance. It has always been customary for government officials to seek the advice of men of consequence in the world of business and finance. Sometimes they have invited the labor men to express their views. But never before has the latter been done so freely and constant-lives now.

The other indication of an increased appreciation of the importance of labor appears in certain constructive policies now being worked out. In the Bureau of Ordnance, for example, there is a new division, one that never has existed before—the section of Industrial Service, with Dean Herman Schneider of the University of Cincinnait at the head.

The Bureau of Ordnance has far more to attend to than the government arsenals, which are directly under its control. There are thousands of private manufacturing plants working under government contract on armanent and munitions of war. The bureau is vitally concerned with the operation of these factories. It must see that the contracts are fulfilled, and that the goods are up to specifications.

Once such a task might have been thought of as a problem of business adjustment. Now it is recognized as a labor problem too, and one of such magnitude that Dean Schneider is laying the foundations of a government agency for dealing with it that will enlist the services of several hundred people. He

called to his aid some of the perts of the country, in their

the Industrial Service Section, as now planned, is to have a sub-division on information. Statisticians and industrial experts will be employed to secure and make available information relating to the comfort and well-being of labor, the supply of labor and the best methods of dealing with bodies of men. Another sub-division will handle, study and work out a system for the furnishing of the different plants with an adequate labor force.

Some of the factories working on supplies for the government have rather crude ideas on the subject of dealing with men. Their methods of hiring and firing tend to aggravate the condition of the labor market. Another subdivision, therefore, has as its task the introduction of an intelligent employment management system in all the factories which lack in that respect. Major Tully, formerly with William Flene's Sons Company of Boston, has charge of this division.

There is a sub-division of adjustments—in other words, a mediation division, in charge of Captain Boyd Fisher, who has had unusual training for such work in the study that he had made in recent years of employment management, in Detroit and elsewhere.

#### WOMEN EMPLOYES OF THE GOVERNMENT

OMBINING to a certain degree A the functions of all the other divisions, there is a Women's Department in charge of Mary Van Kleeck of the Russell Sage Foundation. The interests of all women employed in the government arsenals and the privately owned munitions factories will be a matter for the attention of Miss Van Kleeck's department. Before taking up her present work, Miss Van Kleeck had directed an investigation of the work of women in the government storage depots. She will make similar studies in the munitions plants and will make recommendations to the Bureau of Ordnance regarding sanitation, hours of labors and all matters affecting the welfare of women.

In the Quartermaster's Department, a division similar to that of which Dean Schneider is in charge, will soon be organized with Ernest M. Hopkins, president of Dartmouth College, at the head. Before becoming a college president, Mr. Hopkins was employment manager for several large corporations.

Another example of the recognition at Washington of the importance of labor appears in the new plans that are being worked out in the Department of Labor. A statement concerning this new development was made in the SURVEY for January 26. The advisory council, which was created by Secretary.

Wilson to assist him in making plans, is meeting every day and shaping up the administrative method by which the new plans are to be accomplished.

A development within a week has been the appointment by the Labor Department of a conference committee of employers and union leaders to work out together a program of industrial relations for the period of the war. The employer members of the committee, who were chosen by the National Industrial Conference Board, are as follows: Loyal A. Osborne of New York, vice-president of the Westinghouse Electric and Manufacturing Company; Charles F. Brooker, of Connecticut, president of the American Brass Company; W. J. Vandervoort of Illinois, president of the Root and Vandervoort Engineering Company; L. F. Loree of New York, president of the Delaware and Hudson Railroad Company; C. W. Michael, president of the Virginia Bridge and Iron Company. The union members of the committee, chosen by the American Federation of Labor, include Frank J. Hayes, president of the United Mine Workers; William L. Hutcheson, president of the International Brotherhood of Carpenters; J. A. Franklin, president of the Boiler Makers: Victor Olander, vice-president of the International Seamen's Union, and T. A. Rickert, president of the United Garment Workers .

These two groups are to meet in the near future and select two representatives of the public to serve on the com-

mittee with them.

The National Industrial Conference Board, which chose the employer members, is a federation of most of the leading employers' organizations of the country. At the time of its organization, two years ago, it was hailed as "an eight billion dollar combination against labor," and was bitterly denounced by Samuel Gompers at the 1916 convention of the American Federation of Labor.

Another interesting sidelight is the appointment on this committee of William L. Hitcheson, president of the Carpenters' Union, to whom President Wilson wrote on February 17 peremptorily inquiring, "Will you cooperate or will you obstruct?" The strike of ship carpenters, which began with some of the men on Staten Island and threatened to spread to all the shipyards of the East, was nipped in the bud by the President's action, and the dispute is to be left to the Labor Adjustment Board.

The criticism of the attitude of the head of the Carpenters' Union, who had refused to enter into the arbitration agreement signed by the heads of the other unions involved in shipbuilding, has been general, and it has been intimated that President Hutcheson did not have the sympathy even of his fellow trade unionists.

A further evidence, not so much of the influence of labor in the government as of the recognition by the government of the needs of its own employes, appears in the new division on housing and health, with Zenas L. Potter, formerly in charge of the welfare work at the National Cash Register Company at Dayton, as chief. The problem of housing government clerks has become exceedingly difficult. There was an addition of 20,000 new clerks in the various departments of the government at Washington in 1917. This, it is estimated, meant an increase of at least 50,000 in the population of Washington. It is anticipated that 20,000 more will be needed in 1918,-the 1917 contingent practically exhausted the surplus of houses and furnished rooms. Now hundreds of prospective employes are going to Washington and are finding it

impossible to get a place to sleep. Every night the Union Station is crowded with those who have no other place to go. It is stated that 50 per cent of those who at the present time are being certified by the Civil Service Commission for positions are obliged to refuse positions when they are offered. because they can find no suitable place in which to live. It is to this task which Mr. Potter is addressing himself. His first step was to secure from the President's Emergency Fund \$25,000, which he is loaning to boarding-house keepers who can furnish satisfactory credentials, to enable them to secure furniture and other equipment necessary for carrying on their houses. A bill has been introduced in Congress calling for an appropriation of \$10,000,000 for the building of houses and dormitories within the District of Columbia. Plans are being drawn for the erection of dormitories to house five hundred people each; others for a model housing development which would enable the building of houses in blocks with a cen-tral heating plant. These houses are planned for army officers and civilian employes, to rent at \$40 a month.

The division is charged also with the responsibility of looking after health, recreation, feeding and working conditions. Mr. Potter hopes soon to have the assistance of an adequate medical force and an ample staff of visiting nurses who will call upon anyone of the 10,000 employes of the War Department within twenty-four hours after she is reported absent on account of illness. He expects by a bulletin service to acquaint the new employes with the recreation possibilities of Washington. A large building is now being erected to serve as a lunchroom for employes, and Mr. Potter's department will advise concerning its management. His staff will also make inspections from time to time of sanitary and working conditions; will interest themselves in the adjust-

AMERICAN woman of education and experience desires home with refined family in the country to recuperate. In return she would be willing to act as tutor, as companion or in some other capacity not involving house work. Address 2714 SURVEY.

ment of any disputes that may arise, and in every way possible will assist in an attempt to make conditions of employment in the War Department what they should be.

## A HOLIDAY'S WAGES FOR RELIEF

W ASHINGTON'S birthday will be celebrated in a singular fashion this year by the 75,000 members of the International Ladies' Garment Workers' Union in New York city, Practically the whole number, by arrangement with their employers, will forego the holiday and turn over the day's earnings to the American Jewish Relief Committee to mitigate the suffering of their war-stricken brothers in Europe. Many employers have offered to pay time and a half or double time to show their appreciation of this special effort, the most generous in some cases being those who have already contributed substantially to the cause.

"The cooperation effected between the manufacturers representing capital on the one hand and the members of the union and its many locals representing labor on the other," says Jacob H. Schiff, chairman of the committee which carried through this plan, "constitutes one of the most remarkable and striking instances of self-searifice in the history of the country."

## THE CHICAGO POLICE AND "WET" DANCES

THE Juvenile Protective Association of Chicago has addressed a
communication to the chairman of the
City Council's sub-committee on police
economy calling attention to the special
bar-permit dance system "as an important cause of waste and inefficiency on
the part of the police force and as a
positive factor in the present crime situation with which the city is confronted."
It includes the following pointed facts:

During December, 233 special barpermit dances were held. One policeman on special detail is obliged to be stationed at each of these dances to preserve order. In the month of December, over 350 policemen were thus removed from their legitimate business, serving from 8 P. M. to 3 A. M. during the hours when the citizens of Chicago are most urgently in need of their protection. At the rate of \$90 a month, this cost the city over \$1,000, or at the rate of \$12,000 a year. The city receives nothing for the services of policemen thus assigned. Of the sixdollar fee paid for the permit, three dollars goes to the police pension fund, the balance covers the cost of investigating the application, clerical work in the collector's office and the time of the general superintendent and second deputy required to issue the permit.

When the plea of economy has caused

DIRECTORY WOMEN'S CLUBS

IN AMERICA for 1918 (Vol. xx.) now in prep aration. Best possible medium for getting before program committees as lecturer or entertainer. "Lecturer's Section" goes free to the new program commitaines of any kind, early enough in the spring for the next season, listing. Gives every federated club in the United States, and is used throughout the year all over the country. Entertainers, leeturers, acc., address for terms.

the removal of policemen on special detail at the newspaper alleys, the Juvenile Court and Juvenile Detention Home, where they perform a useful service to the community, it appears to be unwise and inconsistent to permit their continued employment on special detail at these dances. The general superintendent of police considers "no dance decent which requires the presence of police officers to preserve decency." The abolition of the special bar-permit ordinance would thus promote wholesome dances for young people in the 445 dance halls in Chicago, would indirectly increase municipal revenues and would materially add to the efficiency of the police department, enabling it better to provide the protection for which it is organized.

This communication by the Juvenile Protective Association is reinforced by specific facts and figures of what was witnessed by the investigators in violation of the ordinances forbilding the presence of minors, the sale of liquor to soldiers and the continuation of serving liquor after 3 A. M. The numbers of police officers were given, who were present and did nothing to prevent these violations, and who were drinking at the bar meanwhile.

## NEW YORK'S PAROLE LAW ATTACKED

IF bills now before the New York legislature, introduced by Assemblyman Bloch and Senator Foley, both adherents of Tammany Hall, and supported by Mayor Hylan, should pass, New York city's Parole Commission would be so changed that its advocates believe its usefulness would be destroyed. This commission represents the greatest advance yet made in this country in the administration of the indeterminate sentence. Under the act creating it there is a maximum but no minimum term for a large number of repeaters and a few first offenders sentenced by the city; the theory of the law is that no human wisdom can tell beforehand how long an individual will need to be confined before he is fit again to return to society. In deciding when this moment has arrived the commission reverses the judicial process, decreeing a man's release rather than his commitment. canvasses a wide range of facts bearing on the question-his pre-institutional record, his conduct under sentence and his future prospects.

Last year the commission paroled 2,650 prisoners, an average of eight or nine a day. It had under parole during the year 3,500 prisoners and its agents made 45,000 visits in councetion with its work. The members of the commission gave large amounts of time—Katharine B. Davis, chairman, being a full-time member.

The Foley and Bloch bills propose to

substitute for the present members persons who already have more than they can do. They would wrest from the mayor the power of free appointment he now has and compel him to designate a judge of the Court of Special Sessions and two magistrates as members. These are not to be paid. Friends of the present arrangement believe that this will emasculate the work of the commission, since the judges will not have time to review carefully the cases of the prisoners subject to parole. Moreover, the mayor may revoke his designations at any time and substitute others. What power this would give him to interfere with and control the parole of prisoners is clear.

#### GOOD CAUSES AND SCHOOL CHILDREN

EVEN before the announcement that the Red Cross would conduct a campaign between Lincoln's and Washington's birthdays to enroll all school children as junior members, evidence was accumulating that a number of school authorities were growing apprehensive over the large number of appeals made by organizations, especially those engaged in war service of some sort, to be allowed to carry on their work within and through the schools.

Several educators, confronted by such demands from more than one hundred organizations, expressed themselves frankly at a conference of New England state superintendents only last month. Some said that no organization should be given permission to work within the schools unless its officers were immediately responsible to the school authorities. Others added that such groups must have a distinct educational aim. All testified that the number of appeals had been greatly increased by war emergencies. The Red Cross was mentioned by name, several speakers contending that even so important and commendable an organization should not be allowed to usurp the regular educational

A similar protest has been made in Indiana. The State Council of Defense is reported to be receiving objections from superintendents who are besieged by never-ending requests. There it has been suggested that a clearing house ought to be established to which requests for entering the schools could be referred. Indeed, the State Teachers' Association has recently recognized the educational section of the Council of Defense as the official committee for guidance on this matter. This committee is sending a letter to all superintendents and high school principals, advising them "not to permit any person or organization to ask school children to sign a war pledge, either for a financial contribution or for service, without first

giving them an opportunity to talk the matter over in their homes." Any proposition, says the letter, "that cannot secure the support of our boys and girls with the approval of their parents should be rejected by the schools." At least one journal of education, the School Review, has already commented favorably on this more.

The campaign to secure junior Red Cross members in the schools was approved by Mary C. C. Bradford, president of the National Education Association.

WOMEN'S EDUCATIONAL AND INDUSTRIAL UNION—Miss Helen N. Henry, eace. sec'y, 264 Beplaton St., Boston. Information regarding women's work, vocational apportunities, social weiter legislation Mass; practical training in institutional management through industrial departmenta. Reading jists on women's vocations.

PRIENDSHIP AND CONSOLATION OF BOOKS FOR THOSE IN AND OUT OF THE TRENCHES

All the World's Great Books at Lowest Prices

In these days of stress and anxiety we appeal to all to seek the consolation and solare that books alone can give. Do not neight the friendship and refuge which reading alone can afford. Do those who desire to cultivate Courage, to enter the doorsay of that quiet temple named Screnity, and to foster the lovely blossom of Hope, it would be well to turn, in this crisist, to the silent company of those who can strengthen the mind, calim the body, and feed with divine food the spiritual nature

## SEVEN NEW VOLUMES NOW READY

No. 734. ANCIENT LAW by Sir Henry Maine

With a lengthy introduction by Professor J. H. Morgan of London University.

The world famous history of the great English jurist and historian who was successively Professor at Cambridge and Oxford, and for several years Legal Member of the Indian Council. The introduction is of special value as coming from an authority so distinguished. It is not only appreciative but critical and forms the best possible guide to the reading of the book itself.

#### No. 735-736. MEMOIRS OF CARDINAL DE RETZ by Himself

d revised resistant of the Translation of 1123 by P. Davall, With an Introduction by Doritol Ogy (in § 2 columes). The revealing and intimate confessions of the rival of Cardinal Mazaria who was in early life a refugee in England after the Pronole war and ultimately became Abbit of St. Deuis. His varied and interesting experiences are described in the most lively fashion.

#### No. 737-738. A HISTORY OF FRANCE by Jean Victor Duruy

Newly Translated by Ceell Jane and Lucy Mensier.

With an Introduction by Richard Wilson, D. Litt (2 columns).

The well known work which is to France what J. R. Green's "History" is to England; with an Appendix bringing the facts down to the opening of the Great War; an indispensable work for all who are interested in our glorious ally and friend. Dursy writes with an ardest patriotism, evere and distinction but he is also an historian of the critical school, as might be expected from a pupil and successor of Michelet. His account of events leading up to the France-Freissan War is especially valuable as he is writing of movements in which he took a prominent part as one of the members of the French Government.

#### No. 739. SELECTED PAPERS OF PHILOSOPHY by William James

A collection of papers of absorbing interest from the works of the great American philosopher, including "Talks to Teachers," "Memoires and Studies," "Talks to Teachers," "Memoires and Studies, "Talks to Teachers," "The Will to Believe," "Tragmatism, "The Laborary published by the gracious permission of Experience and the Company of t

#### Taras Bulba, with "St. John's Eve" and Other Tales by Nicolai V. Gogol

Some of the most powerful and dramatic writing of one of the men who opened the minds of the Russian people by showing them as others saw them. Gogol's tremendous power is one of the marvels of modern world literature and it is best in this remarkable book.

## EVERYMAN'S LIBRARY

FOR MEN OF THE ARMY

If your pal is going, if your son, your brother or anyone near and dear to you is off for France or a Cantonment-give him some volumes from Everyman's.

HE WILL NEED THEM FOR THE HOURS SPENT OFF DUTY

They are small in price, just the right size for a soldier's pack and there are 741 of the world's greatest books to choose from. In a letter from one of the boys to his mother, given in full in the New York Tribuse of July 18, 1917, he ends with these words, "litt please put an Everyman's Book Catalog in your next letter." And this is only one of the many instances showing how the boys wmit and need the books from this wonderful library—because of the small cost, the convenient size, and the clear type-

EVERYMAN'S LIBRARY, containing 741 volumes of the "World's Greatest Books," makes a superb collection for a regimental lilitary for both those regiments still training at the different cantouments and for those regiments already "over there." Make the regimental libraries complete by giving them one of these wonderful sets, they are easy to pack and occupy the smallest possible space.

#### Per volume, cloth, Net, 60c

Full red leather stamped in gold, gold tops, per volume, Net, \$1.25

Send for a complete catalog.

A CARTOON DRAWN BY WALTER CRANE IN THE NINETIES, ILLUSTRATING (WITH THE ONE REPRODUCED ON PAGE 587) THE CONTINUITY OF THE INTERNATIONALISM OF BRITISH LABOR

The British Labor Offensive By Paul U. Kellogg

It has become almost fashionable to speak contemptuously about "business men." They have become as unpopular as hedge-hogs at a picnic. But it is a cheap pastime to denounce all "business" men as Profiteers. Under the present profit system what business man is not obliged to make as much money as he legally can, or be forced to the wall by some competitor who has not such fine sensibilities? And which of you, so smug in your virtue, wouldn't rather eat pate de foie gras than file a schedule of liabilities?—which brings us to the real point of this discussion:

Of inabilities /---which brings us to the real point of this discussion:

Can we be fair to ourselves in charging only 60c. for a handbound, himp, croft-leather volume in the Modern Library? When sixty cents was fixed as our selling price, the United States had not yet declared war against Germany. Since then, the prices of egg, butter, pork, ice-cream coals, bed, coal, cotton, talcum powder, wo of, leather, newspapers, filed of sole Marguery, papers, filed of sole Marguery. etc., etc., have advanced about 63 132/789%. Even the price of labor has greatly increased. Still there is more than a vague susicion that the present startlingly high prices are not wholly justified by economic causes. Some zealous and righteous citizens even insist that there are more diamonds, automobiles, fur-coats and gilt edge securities being worn by a select few than ever before.

But listen to the other side of the question. The other day one of our friendly fellow publishers treated us to a four-course luncheon and gently suggested that we have a lunacy commission appointed for ourselves. "Why, boys," he groaned, "here you have about two hundred magazines and newspapers and the have about two hundred magazines and newspapers and the leading colleges and schools and libraries singing the praises of the Modern Library in so many different, yet singularly harmoni-tons strains, that if you only had an ear for music you would recognize the tune. It's Johnnie, Put Your Price Up! "Well. answered. "I should hope so," he continued, somewhat less gloomily, "Smyth of the New York Times, Kerfoot of Life, Davis of the Evening Post, Gerould of the Bellman, Sell of the Chicago News, N. P. D. of the Globe, and the Independent, the Philadelphia Press, the best papers on the Pacific coast, the Printed Prin literary sensation of 1917. You have given the book-loving pub-lic the biggest bargain ever. With your fine titles and valuable literary sensation of 1917. You have given the 5008-10 ving public the biggest bargain ever. With your fine titles and valuable introductions and attractive binding and clear print, sixty cents is simply rificulous. What is the new price going to be?" "We have been thinking of seventy-five cents." "Figure your costs!" have here the property of the agrily interrupted, gulping down a Benedictine and brandy. "You can't do it! Everything is up from 10 to 200% since you started—from composition and plates to binding, from office salaries to royalties. And I understand one of you had the nerve to get married recently. Heaven help her at 75c. a volume!"

"Yes, there is a lot in what you say, my friend." the newly ref, tiere is a lot in wait you say, my friend, the newly married one of us admitted, after the waiter had softly reminded us that we were not the only ones in the room. "We don't criticite you or any of the others for asking more money for the books you are publishing. We know you are entitled to it. We know that you are simply business mem—not Profiteers. We, too, have been thinking about a higher price, but we cannot forget that the Modern Library is a unique institution. When we started it, we announced that we did not expect to get rich and that that was not primarily our ambition. So we have decided to stick to the old price-sixty cents per volume, postage 6c extraand we are going to add new titles regularly, with the best introductions we can buy. All the additional support we will ask of our friends is to huy four volumes where they used to buy two, and twenty instead of only ten." We got our hats (paying for them as usual) and waited a moment for our friend to join us, but he could only gasp feebly,

as he lit his fifth fifty-cent cigar, "Don't wait for me, boys. The shock is too great—or may be you're only joking."

The shock is too great—or may be you're only joking.

We are not—here's the list of titles now included in the
Modern Library. They are all hand-bound, in limp croft leather,
and sell at all stores for sixty cents per volume, 6c. extra by mail. Check the titles you want.

## The British Labor Offensive

The London and Nottingham Meetings

By Paul U. Kellogg

EDITOR OF THE SURVEY

AST WEEK meeting in London, representatives of labor and socialist groups in England, France, Italy, Belgium, Portugal, Rumania and South Africa accepted in substance the war aims put out by British labor in December; projected an international conference, to which representatives of the working classes among all belligerentswill be invited; determined upon an international labor conference ost it concurrently with the official peace conference whenever held; called for a labor representative on each national delegation to the latter; and voted to send five delegates forthwith to the United States "for the purpose of conferring with the representatives of the American democracy on the war situation."

This London meeting was the second step in the deliberate execution of what may come to be known as the British labor offensive. The first step, culminating at Nottingham a month earlier, was to get unanimity on war aims among the labor bodies of Great Britain; the second (at London), to bank up majority and minority labor groups among the allies behind a common program; the third (at an international meeting in Switzerland), to outflank the military deadlock and the diplomatic inhibitions that for three years have isolated the working classes of Europe, and to find out for themselves first hand whether or not they might clear a way to peace.

Whether the war is to end through a military decision or through negotiation, they thus serve notice that they propose to have a say in the settlement of the struggle in which they have spent and been spent so unstintedly. They are profoundly at odds with the whole scheme of foreign relations which broke down in August, 1914. They feel that they have paid the piper, and they do not propose to leave their security against future wars in the hands of the governing classes with whom they identify this war. They are not sanguine as to the ability of those classes to get them out of it, or get out of it what they went into it for, much less to lay a new world order that will stand. They look to the common feeling and brotherhood of the masses the world over as the only factor sufficiently forceful to checkmate competing commerfactor sufficiently forceful to checkmate competing commer-

cialisms—as a bond to hold the world together, greater than all the international laws and courts and treaties that can be devised. They forecast a recoil against the old order of things which in the period of reconstruction will effect changes in the economic life, nation by nation, profound as those in the politic life following the French revolution and the Napoleonic wars, when by the 30's the husks of feudalism had been thrown aside and the middle classes emerged in the liberal movement throughout Europe. With this difference: education, newspaper reaching and interchange of ideas now quicken and bind deeper reaches of the social order. These the great war has cut asunder and isolated; but the working classes throughout Europe have gone through like experience and out of their common travail they may find common purpose.

Thus it is that the British labor men, and with them now allied labor, propose to find out, if they can, on what terms of settlement the German and Austrian working classes (with whom before the war they had much in common) stand close to them; what differences separate them; which of these differences are due to ignorance and distortion, and so can be swept away by letting in the light; which of these differences are due to obstacles thrown in the way by other interests in the national life, and so can be combatted internally with mutual understanding and support; which of these differences, if any, are in truth irreconcilable, and so must be fought through to a finish. And they believe that their statement of war aims brings the issues back to the un-imperialistic bedrock on which they (regardless of what motives actuated other groups in their own nation or in other nations) went into the war, and on which they propose to fight to the end-the issues of self-determination, which cluster about Belgium and which are democracy's answer to militarism and conquest. They believe they have stripped off those elements of competitive aggrandizement-forcible annexation, punitive indemnities, economic boycotts and the rest-which have come to encrust these first purposes and have given color on every hand to the propaganda that each people is fighting a war

The Survey, March 2, 1918. Volume 39, No. 22, 112 East 19 Street, New York city

Digitized by Google

"Democratic diplomacy has begun."

of defense. They believe that these issues are so close to the mainsprings of working class feeling that the German socialists will get out of hand if their majority leaders go back from such a conference refusing to meet them. They believe that they will have driven a wedge between the German working class and the government which, sooner or later, will rend the central empires if the workers meet the issues and the governments refuse.

They are not visionaries, these labor leaders; they do not expect to unravel in a night a skein which has been tangled and knotted by three years of blood and strain. They do not waste time in debating whether it can be cut over night with a sword, with those who have foreshadowed a swift military decision with every spring. Rather they are going about the slow task of putting as much courage, patience, hard thinking and mass action into their labor offensive as goes, say, into preparing for a half mile of artillery fire, barrage and infantry assault. And they hold it as reprehensible to ignore and neglect the marshalling of civil pressure in the great struggle as it would be to ignore the air service or the navy.

They are not defeatists, these labor leaders. They were as active in their project last fall, when the British second army thought it had turned the corner of the war at Paeschendale, as they are today when the whole talk on the western front is how to meet the anticipated German drive. They simply do not take stock in the cry that you cannot wage war and exert statesmanship at the same time. They do not fear that labor negotiations will demoralize the allied armies; hely hold that with nations at war, civilian morale is equally or more important, and that secret treaties, dickers over territory, the mistrust and lack of confidence which come of fogged purposes, are forces of disintegration which can be

overcome only by bringing the purposes of the war unequivocally out into the open and out at a level upon which the average man will be fully willing to continue to lay down his life and those of his sons.

They are not peace-at-any-pricers. Their statement of the conditions on which they will continue their support of the war and on which they are prepared to make peace are affirmative. They are simply through with talking about victory like buying a pig in a poke; about winning the war, without setting forth what ends you hope to win and without keeping your mind open to any less humanly costly way of achieving those ends.

They are not for a separate peace. Their whole procedure is to organize a common front; and to do it, not, as they believe the governments had done prior to President Wilson's initiative, by arriving at the least common multiple of their several ambitions, but by cleaving through to what are the great common denominators of democratic purpose.

They are not Bolsheviki, though they have been stirred by the adventuring of the followers of Trotsky and Lenine; it is the Russian Minimalists who cabled concurrence with the British statement, and it is with their leaders that they have old associations. But they ascribe in no small part to the allies themselves (in failing to meet the Russian provisional government half way in the matter of war aims and in blocking the Stockholm meetings) the overthrow of Kerensky, the cave-in of the Russian armies, and all that these events have meant; and they believe an altogether different outcome of the Brest meetings would have come, if the same attitude had not been persisted in toward the Maximalists.

They are not, in fine, anything that the jingo press ascribed to them in the fall and early winter, and they are not concerned with what it ascribes to them now, except as it affords powder to their agitation and goes further to identify the contrary policy with those very forces against which the English labor movement has wrestled in forcing through domestic, industrial and political reforms in the last twenty years.

Now it is just here that the British labor offensive has a significance that provokes the most careful scrutiny and warrants a definite effort to interpret its trend as the English labor leaders see it, to American social workers-and to the American labor movement which was conspicuous by its absence from the inter-allied conference in London. The positions I have endeavored to sketch in broad outline are, of course, not altogether different from those held painfully by individual thinkers and small groups in each of the warring countries, individuals and groups who have been damned for their pains, and who have lacked both the mass and momentum to get their proposals across to the general public. But here, shouldering their way up into the arena not only of discussion but of decision, comes a body of men who refuse, quite as doggedly as the lonelier prophets, to be dislodged by conventional blasts of denunciation and whom the very winds of controversy serve only to reveal as a rapidly mustering

In France and Germany, the socialists have been split, and only the minority factions have taken a position of opposition. In Italy, it has been the majority, but the working classes in the Italian cities have not as yet found common cause with the peasants. In France, also, the syndicalists present a separate wing of the labor movement, discounting both the parliamentary groups of socialists. Since last fall, Italy like France, has been invaded and the psychology of the situation has been against any organized action which might be construed as counter to the prime duty of getting the invaders out. In undefeated, uninvaded England, the labor

movement was freer to assert itself along lines more nearly analogous to peace times.

Moreover, with hold-over parliaments, more or less out of touch with the modal changes in public opinion, and with coalition governments, short-circuiting the development of party sentiment as such, the policies of the older party groups among the allies have not crystallized around war issues in a way to clearly differentiate them. Here, the English Labour Party has found its opportunity; the elimination of its secretary, Arthur Henderson, from the British War Council by way of the "door-mat" on August 11 last, being the occasion for its action but not its cause. Within the last twelve months it has slowly formulated a coherent program, both of foreign and internal policy, which could be weighed against that of the government in power and which offered an alternative, fresher approach to issues of war and peace; a program which on its international side could be taken over by kindred groups in the allied nations who had been groping for such leadership, and which had the tremendous reinforcement of being, seemingly, more in line with the free statesmanship of the American president than the course their own governments were able, or chose, to follow.

Still another factor should be noted, and that is that the Labour Party is mustered largely of men who have been "for the war," and who are indispensable to it; who have the disconcerting effrontery to lay down with one hand plans for a great memorial in London to their fellows who have fallen in the conflict, and with the other set going the nominating machinery for contesting not only the 50 seats they now hold in Parliament, but 300 which, if they succeed, would give them more than either one of the older parties. miners of Great Britain, for example, with three hundred thousand unionists in the British forces, cannot lightly be discounted as "slackers," nor the British Labour Party set aside as negligible, with its 2,500,000 members, in the overt act of stretching their tent ropes to include all workers "with hand or with brain," with testimony of social unrest drawn by government inquiries from every part of the kingdom and with the clear prospect that the demobilized troops will join forces with them.

So it was that after a certain noble peer had been soundly scolded as a pacifist Tory for writing a piece to the papers: after a Russian government had gone down with its plea for a fresh statement of war aims unanswered; after President Wilson's formulæ had been met with altogether vague if hearty assents; after the U. D. C. leaders, and at their side. a score of like-minded commoners who had never broken silence before, had been denounced by spokesmen for the Cabinet for raising the issue afresh at Westminster; after all these things, a delegate conference of the Labour Congress (the industrial organization of British labor) and the Labour Party (the political organization of British labor) came forward with their joint statement of war aims on December 28, and smoked the government out. A carefully prepared statement was given out by the premier. There followed President Wilson's world-encircling message of fourteen points which the English labor leaders hailed as kindred to their own; and which the French parliamentarians, in a remarkable session of the Chamber, claimed as breathing the very spirit of France, marred only by the consciousness that their own government had not given it utterance first. Whatever the considerations inside the English War Council, and whatever commitments to the allies outside, had inhibited Lloyd George from coming forward earlier, no longer held after labor's show of hands. Rightly or wrongly, the labor group feel that they were the only force strong enough to have opened the way

LABOUR'S MAY DAY

Watter Orang del

for his statement; the only force strong enough to bring the government into line in the future on those crucial points of President Wilson's statement, and of their own, where the British official statement is silent; where France and Italy have not spoken. And heartened by these developments, the British Labour Parry went into annual session at Nottingham late in January, to gird its strength for further and more severe tests.

In a way, the Nottingham meeting originated nothing, brought nothing to a head. It merely affirmed the war aims which the two great British labor formations had agreed to in December, and which were to receive the sanction of allied labor groups at the February conference just held in London. The reorganization plans for the Labour Party, which were the chief item on the order of business, which had engrossed much of the time of the executive in recent months and which will lay the framework for its coming political campaign, were held over until a special convention, following the London conference. The tentative draft of its political platform-Labour and the New Social Order-in a sense recapitulated the program of internal policy adopted at the last meeting at Manchester. It was presented at Nottingham, not for adoption, but for reference to the constituent organizations in advance of its submission to a party conference in June next, or to a special conference should a general election come sooner,

Nevertheless, the Nottingham meeting gathered up all these strands into the cordage of its organized purpose and Course in New York Engages Post

"CAPTAIN COURAGEOUS"

easily may come to be looked back upon as the outstanding labor gathering of the war in England.

In it, for the first time, the labor movement clearly demarked itself from the coalition government, as a party of opposition if events so develop, but rather, for the present and for the future, as a party of affirmative proposal. Its Labour and the New Social Order may well become its charter for the reconstruction period, as its "war aims" are its international program. Two labor leaders, Mr. Barnes and Mr. Roberts, are members of the cabinet: Mr. Barnes is a member of the War Council. But while the vote of the conference was against demanding their withdrawal (Mr. Henderson leading the opposition in person) on the ground that it might embarrass the government in the prosecution of the war, there was no hiding the general satisfaction in the trouble they were having in their constituencies, and there was unanimous approval of Henderson's statement that never again would he be a member of a government in which labor was not in a majority.

In the Nottingham meeting, also, the swing of the labor movement "to the left" as the outcome of the three war years stood out as an accomplished fact. Throughout those three years, Ramsey McDonald, because of his immense personal

popularity, has been retained as treasurer of the organization. He was nominated this year by nineteen labor unions, national and local, nine labor councils, and twenty-six local labor parties, committees and leagues, with no competing nominations whatever. But for more than the first half of that period his stand on the war, along with that of Philip Snowden, W. C. Anderson, F. W. Jowett, and others, made these Independent Labour Party leaders seemingly almost as hopeless a minority in the Labour Party itself as they were in Parliament. Today they are the fighting end of the clear majority, giving it fire and vigor; with Arthur Henderson showing his powers as a political strategist in carrying with him into the new combination many of the more conservative leaders. Men like President Purdy still talk the language of a year ago but back up the international program which the rank and file have laid hold of with a fervor which can only be compared with the feel of a labor group in the midst of a great strike.

And finally, the Nottingham meeting not only sanctioned the "war aims," but wrote an enacting clause after them, in its decision to go ahead with inter-allied and international gatherings. It brought together fraternal delegates from France and Begium, who before they left made clear that their informal interchanges here had paved the way for such joint action. For themselves, the British delegates, representing the organizations affiliated with the Labour Party, passed the following resolutions:

#### THE LABOUR PARTY

## 17th ANNUAL CONFERENCE

That this Conference representing the organizations affiliated to the Labour Party-

- (a) Welcomes the statements as to War Aims made by the British Prime Minister and President Wilson, in so far as they are in harmony with the War Aims of the British Labour Movement, and make for an honourable and Democratic Peace:
- (b) Presses the Allied Governments to formulate and publish at the earliest possible moment a joint statement of their War Aims in harmony with the above;
- (c) Approves the arrangements made for the holding of a further conference in London on the 20th February of the Labour and Socialist Parties of the Allied nations on the basis of the War Aims of Briish Labour with the view of arriving at a general agreement among such Parties;
- (d) Calls upon the working class organization of the Central Powers to declare their War Aims and to influence their Governments to make statements of their War Aims in order that the world may see how far the declaration of all the Powers provide a basis for a negotiated and lasting Peace and
- (e) Assuming that a general agreement can be arrived at by the Lahour and Socialist Parties of the Allied nations directs that their several Governments should be then at once urged to allow facilities for attendance at an International Congress in some neutral State, preferably Switterland, at which organized working class opinion of all the countries may be represented, in order that nothing may be left undone 10 bring into harmony the desires of the working classes of all the beligerents.

That a copy be forwarded to the Prime Minister.

The next article by Mr. Kellogg, American Labor Out of It, will be Published in the Survey for March 9.

# Good Housing That Pays

#### By John Ihlder

EXECUTIVE SECRETARY PHILADELPHIA HOUSING ASSOCIATION

EVERAL years ago there was an attempt to organize the employes in the leading industry of a certain city not one hundred miles from Chicago and to call them out on strike. The organizers found their job a hard one. It was admitted that the men were getting lower wages than they could have gotten in Chicago, but somehow the comparison did not produce the expected reaction. Finally, one of the local men said: "The trouble is that we are able to live better here than we could in Chicago on higher wages, we have good shooks, we live in pleasant neighborhoods. How would we live if we lost our jobs here and went to Chicago?"

That was several years ago. What that laboring man said was not news even then either to employers or to employes. But there have been special reasons that prevented either from publicly acknowledging the truth of it. The employer, fearing complications if he committed himself too whole-heartedly to a campaign for better housing, either closed his eyes to conditions or started a little village of his own, where his concern for the homes of his employes would yield direct returns to the business with the least possible trouble by the way. Moreover, such a village, besides its business advantages. ministered to a very human side of his being. For quite the same reasons that village did not appeal to labor, especially organized labor. It was too much a thing of and pertaining to the boss. At the same time the wage-earner, like the employer, hesitated to commit himself too wholeheartedly to a campaign for better housing. He too feared complications. His program called for higher wages; he was not going to be placated with a better house.

So with employers fearing that better houses might demonstrate the need of higher wages, and labor fearing that better houses might be substituted for higher wages, the cause languished. Each party went its way, the employer substituting the better houses on his own conditions, the laboring man declaring that with higher wages he would be able to get the better house. Both have made some progress, just enough to demonstrate the inadequacy of either policy. Few of our company-owned villages are sources of real satisfaction to their proprietors; thousands of workingmen are leaving higher paid jobs for lower paid because they cannot live comfortably while they draw the high pay.

So gradually, but with a speed considerably accelerated by the war, the two parties are drawing together. The employer is beginning to acknowledge that higher pay is economy when it is invested in better living for the worker, the employe is beginning to acknowledge that higher pay is useless unless it buys a better living for himself and his family. They have not reached agreement on the subject yet, but some sort of working basis seems to be just around the corner. And now appear pamphlets such as those published by the Connecticut Mills at Danielson, Conn.

The Connecticut Mills have built a village for their employes. According to the pictures it is a very attractive village, no two houses in which are alike. The pamphlets made a great deal of the physical differences between the "village beautiful"—who says the American business man is not sentimental?—and the old style mill town, but the real progress

is shown by the spirit that informs the text. The village is really mill-owned, but in order to mitigate that fact the management organized the Danielson Construction Company to do the developing and invited local capital to take a part in the enterprise. Then the mills rent the houses from the construction company and in turn sub-rent them to their employes.

· Some day the mill management will learn that house management is more important and more difficult than house construction. Then it will take a second and much bigger step forward by giving up mill control of the houses. It still hangs on to the old idea that there is credit in heaven for those who rent houses at less than a fair return, and it claims this credit. Yet in one sentence it admits basing rentals upon a 10 per cent return on the cost of the house and declares that it makes no profit. There must be something wrong with its business methods. Furthermore, it stands ready to meet a deficiency "in exceptional cases" of twenty-five dollars a year, "when a tenant employe cannot at the time afford the rental price." Its purpose is frankly stated-and in that frankness lies the chief evidence of progress: "A floating population is the bane of every mill or industry. Novices are expensive. Changes are disorganizing. Green help is poor help and spells inefficiency. The tide of employes flows to us because of superior accommodations furnished and remains with us for the same reason. The economy is apparent."

With these better homes go better wages, according to the title page of one pamphlet. Then follow pages of genuine real estate "literature" of the kind that has sold millions of suburban lots and proved the most effective enemy of the city apartment house. Now its potency is to be tried on the laboring man. Will he respond as have the clerk and other small salaried suburbanites? All the well-known wiles are used. from the sketch of a vine-covered porch on whose steps the parents sit to watch their young hopeful on the path below, to half-tone pictures of the Danielson public school and public library and a view of a very well-paved, well-cleaned business Danielson, on whose outskirts stands the "village beautiful," seems to be a progressive, attractive, well-managed, little New England city. But in spite of many likenesses, there remains the one great difference between the usual suburban development and the "village beautiful," a difference that the company itself emphasizes by using italics-"No Evictions Here. If, through illness or any other trouble, you cannot make up even the two dollars and fifty cents or four dollars a week rentals, the company you work for will take care of a good workman."

Gratitude is said to be one of the rarest of the virtues. Will not the Connecticut Mills find it so? For three years Americans have exclaimed over the stupidity of the Germans when it came to understanding the point of view of other peoples. Yet year by year we have illustrations of the in-ability of the employer who cannot understand that some of his employes object to "being done good to." The management of the Connecticut Mills is a long way beyond the founder of Pullman, but while it admits frankly that its purposes is to keep good men, it cannot get the idea that the good man does not wish to subject himself to company benevolence and claims for gratitude.

OUT-OF-DOORS WORK BOTH HEALTHFUL AND USEFUL-MEN FROM THE RAHWAY REFORMATORY BUILDING A BRIDGE

# Prison Reform by Daylight

The High Mark Set in Both Methods and Substance by the Report of the New Jersey Commission

By Winthrop D. Lane

EW JERSEY has been carrying prison reform to the people. For over a year now her treatment of prisoners has been studied, abused, defended and improved-in the open. The people have been spectators of and at times participants in a fight against harshness, brutality and ignorance (not always wellmeaning) that has been carried on with the whole state as stage. The most interesting thing about the report of the Prison Inquiry Commission, published recently, is just this; that it is not the resounding epilogue of an investigation likely to be remembered only for its noise, but a working guide of reform principles, struck off in the hot march of the people toward a better and sounder penology. Too often commissions in this country have blown a few loud blasts upon this eternal topic, and then joined the music of the spheres. In New Jersey the people themselves have been blowing the blasts. Reform was under way while the commission was ordering its desk blotters.

As far back as January, 1917, the New York Evening Post

MESS TIME AT BAHWAS

began exposing conditions at the state prison at Trenton. Even the Post was indebted for its inspiration to an unusual type of prison reformer, Frederick Boyd, a sympathizer with the Industrial Workers of the World, who had served a term at Trenton for advocating sabotage in the silk strike at Paterson. Following the Post several local newspapers swelled the chorus. Governor Edge appointed a commission of inquiry, dismissing the head of the state prison as he did so. The commission, reporting its preliminary findings within a month, substantiated many of the newspaper charges. The state health department then took a hand and characterized the prison as a breeding place for tuberculosis. The legislature appropriated \$44,000 to carry out some of the commission's recommendations, and the life of that body was continued for another year.

While the members were thus extending their inquiry to other parts of the state's correctional machinery, various improvements were made. One of these was the election by the inmates of the state prison of a standing committee of ten of their number to present grievances and act as a mediating group between the administration and the prisoners. This early resulted in more harmonious relations and in securing for the men the freedom of the prison yard after working hours on Saturdays and all day on Sundays and holidays. Another improvement was the inauguration of physical and mental examinations under the charge of Dr. Henry A. Cotton, of the State Hospital for the Insane. Dr. Cotton

This comminion is the annu that has much the report here retrieved, a consisted originally of William B. Dickson, Morntley, reterrentieve of the Midvals Sted and Ordanace Co., chairman; Desight W. Morrow, of the firm Midvals Sted Lauriera Alda of Prison Reform Association; John P. Murray, number State Chartiera And and Prison Reform Association; John P. Murray, number of the New York of the Commission of

has since been transferred to the national service, but he remained long enough to find nine insane prisoners and to remove them to the state hospital for treatment.

Perhaps the most important change of all has been the abolition of contract labor, that vicious system of leasing inmates to private employers for a specified sum per man. The warfare against this method of exploiting law-breakers began in New Jersey over forty years ago. In spite of legislative acts to end it, six contracts were in operation at the beginning of 1917, employing over five hundred men. The control of the men was practically handed over by the state for a large part of each day; they became mere sources of profit to the contractors; all thought of making them fitter to return to society was abandoned.

Governor Edge abrogated three of the contracts last year. The remainder were terminated January 18, to take effect next July; the firms were given ample opportunity to make adjustments. Since publicity is not usually desired by the holders of such contracts, partly because of humanitarian objections, partly because of the opposition of organized labor, a service has been rendered not only in oussing them but in spreading their names upon the record. Some of them still hold contracts in other states. The first tog ow sthe Trenton Whisk Broom Company, the next the Rancocas Mills, the last three Oppenheim & Company, Inc., W. S. Rendell and the Crescent Garment Company.

In announcing his order terminating the contracts, Governor Edge said he was convinced "that a unified effort to properly utilize the state-use system [manufacture of goods by prisons for the use of institutions and political sub-divisions of the state] will not be made until the contract system is definitely and finally wiped out."

The report of the commission goes far beyond these improvements. In the first place it covers all the penal institutions of the state, the reformatories for men and women (at Rahway and Clinton, respectively) and the state homes for boys and girls (at Jamesburg and Trenton), as well as the state prison. In the second place, it contains in a separate volume, by far the bulkiest portion of the report, a history of the penal, reformatory and correctional institutions from the state's carliest settlement to the latest legislative amendment. This history, written by Harry E. Barnes, lecturer in history at Columbia University, recapitulates the essential features in the evolution of penology for the whole country. It is a detailed study of one important aspect of social history.

In addition to Mr. Barnes, the commission called upon a number of specialists and outside agencies to help it: George W. Kirchwey, former warden of Sing Sing; Paul Kennaday, who became acquainted with the prison labor problem by his researches at Sing Sing; Philip Klein, assistant secretary of the Prison Association of New York; Judge Harry V. Osborne, of Newark; C. L. Stonaker, general secretary of the State Charities Aid and Prison Reform Association of New Jersey, and others. It is no disparagement of the constructive thinking of the commission, and especially of the chairman, to say that Mr. Kirchwey substantially wrote that part of the report dealing with facts and recommendations. The New York Bureau of Municipal Research also contributed to an inquiry into the pardon and parole system of the state.

New Jersey's two reformatories are among the best known in the country. The commission says that "Rahway is in effect a prison with reformatory features, rather than a reformatory pure and simple. It is too much like its famous prototype, the Elmira Reformatory, after which it was consciously moulded, to be altogether admirable. Architecturally it is, like Elmira, a prison, and, like Elmira also, it has more

than a touch of the severity of spirit which has characterized prison management everywhere." Inasmuch as Elmira was regarded until recently as something of a model even by specialists in penology, and is still often spoken of with praise, this is desirable plain-speaking.

Concerning the abortive attempt at self-government made at Rahway by Superintendent Moore and abandoned after a year's trial, the commission grows almost caustic. "Ward politics" are said to have sprung up during the experiment there, but the commission wisely remarks that "ward politics" are an incident not inknown to self-government outside prison walls. Indeed, one is almost allowed to draw his own conclusion, though the commission does not commit itself, that training in ward politics may be, after all, fairly effective preparation for that "return to society" for which all prisoners hope.

The remarkable success of an experiment in self-government in the Philippine penal colony at Iwahig is commented upon, and the commission rather bluntly suggests to Superintendent Moore that he "try again." Why the highly successful, if less spectacular, demonstration in self-government carried on at the farm reformatory for girls at Clinton is passed over by the commission in complete silence, one is at a loss to guess. Not only has this experiment, under the sympathetic

THE EVOLUTION OF COUNTY JAH. ARCHITECTURE IN NEW JERSEY

THE FIRST STATE PRISON OF NEW JERSEY, 1797-1836

guidance of the former superintendent, May Caughey, been extremely useful in its effect upon girls, but it antedates most of the attempts of a similar nature that the public has lately been hearing about.

The political virus has worked overtime in New Jersey's penal system. Mr. Barnes made the interesting discovery that every keeper of the state prison from 1873 to the present time, and every supervisor since 1885, with one doubtful exception, has been of the same political party as the appointing power and generally active in party politics immediately prior to his appointment." Of course, the old argument has been made that this method produces some good men. Macaulay answered that argument years ago by remarking that England would undoubtedly get a few good members of Parliament by choosing the hundred tallest men in the country. An ancient king was chosen by the neighing of his horse. Such logic quite falls to the ground, says the commission, when one contemplates the "almost complete failure of the prison, either from the financial, the disciplinary or the reformatory points of view."

The commission has looked at the correctional system with the eyes of informed penologists. While it is careful to say

CONVICTS DIGGING AN ARTIFICIAL LAKE

that New Jersey's institutions are, "upon the whole, fairly abreast of the penal systems of other progressive states," yet it is not blinded by the mere appearance of progressiveness. It sees, for example, behind the statute setting up an indeterminate sentence to the real workings of the act. The form is there, but not the spirit. This spirit is keeping "the wrongdoer in confinement until he has become a new man and has ceased to be a menace to the community," yet the prison authorities either "ignore it or assume that the negative attitude of passive obedience to prison rules is sufficient evidence of reformation." Both the indeterminate sentence and the parole system, the commission declares, have proved largely ineffective, owing to the multiplicity of authorities vested with the paroling power, to the short periods of detention of inmates in the reformatories and state homes, and to the fact that a wholly inadequate force of parole officers is provided to exercise the necessary supervision over delinquents at large

Education afforded inmates in New Jersey's correctional institutions is wholly inadequate, the commission thinks. Fairly competent elementary instruction is not enough; there should be industrial training also. Yet none of this is "even attempted," to use its own words. In the field of industry, the commission favors the state-use system, though it recognizes that the building up of such a system, one that will meet both the needs of the inmates for training and the economic interests of the state, will take time. "The opening up of the picturesque hill country of Essex county by the building of roads and trails, and the work of reclaiming the vast areas of waste land in the central and southern parts of the state. would seem to furnish the needed opportunities" for useful employment of inmate labor in the meantime. The future. it believes, will refuse to tolerate prisons of the cell-block type and will "erect a new type of prison on a wide acreage of ground, with decent conditions of living and abundant opportunities for work and necessary recreation in the open air.

A number of changes that ought to be made should be postponed, the commission thinks, until the creation of a central board of control for the whole correctional system, which it strongly recommends. At present each of the five institutions has its own board; this determines its policy and directs its management. There is no single controlling or supervisory authority except the governor, who, with the

THE SECOND STATE PRISON IN NEW JURSEY, 1836-84

advice and consent of the senate appoints the members of the different boards.

The commission recommends a single board of control, to be charged with the general administration of all the correctional institutions of the state. This board should be composed of the governor and eight members appointed by him, two of them women. No member of the board is to be paid. In addition to controlling the five principal institutions, the board is to have general power of supervision and visitation over all local places of detention. Its powers are to be exercised through an expert commissioner of correction, to be appointed and removed by it. This commissioner is to have power, in turn, of appointing, subject to the board's approval, such expert deputies or bureau chiefs as may be authorized, not exceeding six in number. These are: a medical director, a dietitian, a director of education, a director of industries, a statistician and a chief parole officer.

Meanwhile, each institution is to retain a local board of management. This is to consist of five members, is to keep the parole power and is to be vested, subject to the general authority of the central board, with the management of its own institution. To prevent such divided control from resulting in friction or in paralysis of authority, the commission suggests that local boards be appointed by the central board and that the latter make general rules and regulations governing all the institutions.

In justifying such an arrangement, the commission says that

it has been guided by the "tendency toward unification" that has been going on throughout the country for years. Central plans of organization, it declares, have been evolved "in an effort to secure the efficiency that goes with centralized authority without secrificing the local interest which, even at the cost of efficiency, is one of the most valuable features of government." It has been guided also, it says, by the precedent of the state deducational system, "in which a general authority over all public institutions of education has been successfully combined with local control" in counties.

It is evidence of the speed with which events are happening in New Jersey that a bill embodying this plan of control has already been introduced into the legislature. Not only the correctional institutions but the charitable ones as well are put under the jurisdiction of the central board. This meets the expressed hopes of the commission, though it did not make any recommendation on that point since the charitable institutions were outside its scope. The bill embodies others of its recommendations also.

Clearly, one of the most vital elements in the success of this plan will be the character and qualifications of the "expert commissioner of correction," to be appointed by the board. That officer will control in large measure the destinies of New Jersey's law-breakers. He ought to be a man of large sympathies and of executive ability, but he ought to be much more than that. He ought to be familiar with the tendencies of modern penology; in these he should take a genuine, sym-

THE NEW JERSEY STATE PRISON IN 1917

pathetic interest. He ought to know that education, training in vocations and some measure of experience in governing his normal prisoner's reform. He ought to be acquainted with the studies of individual delinquents made by Dr. Healy and others. He ought to know the kinds of causes of criminality that these studies have revealed. He ought to know, for example, that general categories of criminals and general theories of crime crumble away when one is face to face with the individual offender. Then heredity, mental condition and growth, environment, the history of childhood and adolescence. physical defects-in a word, the sum total of forces that have made the individual what he is-become all important. Painstaking diagnosis of each offender is the essential preliminary of treatment; without this, no step can be taken with assurance, Insane prisoners, feebleminded, the mentally deteriorated and psychopathic, are not always easily discoverable; yet their discovery is necessary to successful reform. Of 608 consecutive admissions to Sing Sing recently, 59 per cent were classifiable in terms of deviation from normal mental health. What to do with these prisoners is the outstanding problem of administration. Treatment good for one group may be utterly futile for another. The commissioner charged with directing a state's penal system need not be a specialist in every branch of his work, but he ought to know the uses to which specialists can be put, and he ought to see to it that all that modern science can contribute to the therapy of crime shall. within the means placed at his disposal, be secured. It is the comparative inattention bestowed upon this topic that contributes whatever disappointment is to be felt in the report. The diagnosis of the individual offender is, to be sure, recognized as important, and a simplification of the procedure for transferring "insane, imbecile and epileptic inmates" to institutions more fitted to deal with them than prisons, is recommended. But there is no detailed discussion of the question; one might read the report through without being made aware that we are on the verge of adopting an entirely new methodology in our treatment of law-breakers. Nobody, of course, knows this better than Mr. Kirchwey; vet for some reason the matter has been slighted. It will not do to plead that the full possibilities of the new method have not yet been demonstrated, for the beginnings made by New York in its plans for a receiving station for diagnosing all prisoners, and by Illinois in its appointment of a state criminologist, are full of suggestion. Possibly this is one of the matters left over for the new board: possibly also the 'division of medicine and psychiatry" provided in the bill already introduced will address itself to this problem. If so, and if in its future handling of that and other matters, the board shall display as much vision and energy as the commission has put into clearing the way for its success, New Jersey will become a leader in her administration of the vexed problem of crime.

## Yankee Peddlers in the Somme

The Smith College Relief Unit at Work

## By Ruth Gaines

HERE are a number of societies in the devastated areas of northern France whose function is emergency relief. The Smith Relief College Unit is not of these. In the first place, these societies had been through our district before it was assigned to us by the French government. In the second place, our families for the most part are not the rélugiés among whom they still work, but those who clung to their homes during the German occupation and returned to their ruins after the German retreat. In other words, poorly as they may be housed, they all managed to save something, or to find some articles of furniture still unharmed. Stoves, for example, are abundant—good, unable, German stoves, which refused to be burned. One

MEPAIRS EN ROUTE TO THE TRAVELING STORE

finds them in the poorest hovels, minus a leg, perhaps, but propped up with a brick foundation, and always "blacked." Boche beds are a close second to stoves in quantity—rough frames of wood, filled with home-made straw mattresses. And, however much the good wife may mourn her own bed, with high headboard and footboard to keep out the dreaded courant d'air, box springs and double mattresses of wool, she may well prefer the Boche bed to the substitutes the government and we are now offering in the way of cast-iron frames and mattresses of hav.

Our peasants, too, have money. There is a tale of a mayor in one village who buried, and saved thereby, twenty-six kilos of coin. Nor were they of copper, but of silver and gold. A woman in this same village is reputed to be worth fifty thousand francs. She now lives in a barn, along with sundry vegetables, which are better bedded for the winter than her own numerous family. She, you will understand, is the wife of the man who had charge of the food supply of the district under the Germans. The Germans took him away with them when they left, but the wife has the money he made.

Aside from neighborhood gossip, the fact remains that our sixteen villages in the Somme are located in the heart of the wheat-growing district of France. Those who did not cultivate wheat had truck gardens of varying sizes. A narrow-gauge road, built for the purpose, tapped this rich region and was supplemented by government-owned canals. I have heard one old farmer, who now lives in a barn, tell how he used to load a hundred huge baskets, such as now stand empty in a corner, and take the train on market-days to St. Quentin. The very ruins, with gaping gates and paved courtyards,

THE NEW SMITH COLLEGE BUILDINGS-BARAQUES AT GRECOURT FOR THE RELIEF UNIT

show the large scale, even according to American standards, on which farming was conducted here.

Of course, not all of our families owned land. There were the landed proprietors, the farmers and the workers, such as hosstlers, herdsmen and laborers. At present most of the proprietors are absentee landlords, ruined for the time being. But they still care, to a certain extent, for their dependents, seeing to it that old and faithful servants have baraques erected for them on their own estates. On account of allowances which every family now receives from the government, based on its size or the number of breadwinners taken either as prisoners or soldiers, or its destitute condition if repatriated, rich and poor are leveled to what we take to be a sort of living wage. That is, each family has an income which, in normal times, would soffice for the necessities of life.

It goes without saying that this clièntele, independent, shrewd, self-respecting, constitutes a different problem from that of the submerged tenth which is more likely to be the field of the social worker at home. The Smith Unit was new to its job. It had before it the task of fitting its work into the plans of the French government, and also of cooperating with other agencies already organized in adjacent districts. But it had a leader who had worked with the French government before, and who had thought deeply on the course which the Unit she founded should pursue.

It is a direct result of her plan that the Smith Unit have become peddlers, hucksters and rag-pickers in the villages of the Somme. Our traveling store, laden with tin-ware, pots, pans, clothing and farm implements, is no less a joy to the countryside than to us. No sooner does it honk its way into a village than women and children besiege it. If there are soldiers, as there are in many of our villages, they come too. This and that is commented upon, tested, priced and finally taken as being "bon marché." Well it may be, being sold at from one-third to two-thirds of its cost. This fact is explained to the purchasers; whereupon a soldier, who has been in private life a small merchant, scratches his head and inquires how long we think we can do business in that way. According to our standards and to the money which flows in in ten franc, twenty franc and hundred franc notes, we think indefinitely-but we do not tell him so. We sell milk, also, and chickens and rabbits and goats. We have been asked to sell the clothes from off our backs, but we have drawn the line at that!

When, from investigation, we feel that a mother is too poor to outfit all of her ragged children with clothes and sabots, we follow a system of credit and exchange. If there is a surplus of vegetables in her fields, we buy them. If the mother has the time and the knowledge, we give out sewing to her, or knitting, and pay a fixed price for the work. We have already between thirty and forty women thus employed, and need an assistant in this department to extend the work. The vegetables we are bedding for our own use and that of our seven cows. The garments go when completed to the store to be sold. Failing these two methods, which are known to the families as "arranging," we barter new clothes for rags. This last is still in an experimental stage, because we are waiting for one of our mayors to move into his almost finished baraque so that we may have his shanty as headquarters for the industry of rug-braiding which we hope to introduce. Doubtless a bit of renovating will be desirable, for it would be unfortunate if the big boiling cauldrons should tip over as I did the other day on the mayor's uneven floor. As for me, it was at a little afternoon coffee with his wife that I vanished from the conversation-which sounds rather questionable! At present, however, we have made a start under even more trying conditions. The young woman whom we have put in charge of the rag-washing does it in the open yard. Her home is one small room which she shares with her grandfather and her uncle and her aunt. All over the village, however, rags are being hoarded for sale if not for barter. They are clean, also, and they will bring six centimes a pound.

Another service we are trying to render in reducing costs and fostering trade, is the opening of a chain of grocery stores. In nearly every village there is someone who had a little épicerie before the war. They have neither the capital nor the courage to begin again. To them, we sell staples, canned goods, tea and coffee below cost and usually on the installment We also fix the price of sale, which one of our enterprising dealers has printed and tacked in a conspicuous place for his public to read. This venture is perhaps the most delicate we have undertaken. It cuts both ways, tending to make us unpopular with the regular dealers in adjacent large towns, and also, until our point of view is understood, in the communities themselves. Why, they reason, should their townswomen make a profit when we might sell the same things at a corresponding loss in the traveling store? We feel that time will adjust this difference of opinion, and we meantime placate the city merchants by becoming their customers and buying from them rather than from Paris, whenever this is possible.

It is not without advice and counsel from the officials of the government that we have launched our campaign. Their comments have been most interesting. Outwardly, at least,

they approve us heartily, saying that promiscuous giving would be the ruin of the peasants. From mayors and schoolteachers we hear the same spontaneous advice: "Do not give, but sell." It has doubtless been easier for us to do this because the Relgian Relief Commission followed the same methods with our villages during the German occupation. Food was sold, but "very cheap." And today, the mothers of families will tell you, with tears in their eyes, how America saved them from starving those two and a half years. Not all of them, of course, are of this mind. Only yesterday I encountered the truculent wife of the garde champetre of - who, by the way, has charge of the commune bread supply and cheated one village completely out of its bread. She, with arms akimbo, assured me in no uncertain tones that she would be very happy to receive anything as a gift, but would buy nothing-nothing at all, you understand.

Following somewhat the government plan of indemnity, we are giving, however, articles the purchase of which would encroach too much upon the hoarded stores of capital. Thus, there is the indemnité de guerre furniture, such as beds, clothespresses, cupboards and the like, which the recipient is supposed to pay for after the war. Of this there is never enough to go around. We are therefore distributing furniture, sheets and blankets ourselves. As the sous-préfet of the district has also given into our hands the distribution of his supplies, we could undertake it only upon a similar basis, which is at least reasonable. But as the "distribution des dons" progresses, we feel much sympathy with the harassed mayors whom we have relieved of this unpopular task. We hope, however, that they will now have more time to attend to the housing problem, which is an acute need-beyond our scope. In most of the villages, government baraques have been granted to land-owners, and are in process of erection. In two villages, the Society of Friends are doing the work; in others, the owners of the land themselves. This branch of relief work progresses slowly, and we hope to be able to push it for the small landholders who are too often overlooked.

I have left but little space to describe our children's work, which, I believe, is the first to be undertaken in the devasted area. Picture to yourselves communities which have had no schools for three years, some of which still have none. There are no schoolhouses; government baraques and dilapidated dwellings take their place. Naturally, school furniture is lacking. Worst of all, the spirit of camaraderie and play has been stifled by the horrors of war. In almost no household is there a father; often the mother also has been taken, and always the older brothers and sisters are "avec let Bocher." At Grécour itself, where we have our headquarters, we keep

open house on Thursday for all the children within walking distance, Thursday being their holiday. There are games, both French and American, and classes in sewing and carpentry. One of the tasks which has most interested the boys has been the making of bookshelves for the schoolrooms. On other days the Children's Department accompanies the store on its rounds and plays with the children while their elders abop. This phase of our work has received the warmest praise of any of our activities from the authorities, both civil and military.

Our medical staff of two doctors and three nurses (who are as yet unprofessional and belong as well to the Children's Department, the Social Service Department and the Automobile Department—we are all officeres!) is busy seven days and some nights very week. Malnutrition and lack of sanitation are responsible for most of the ills which they treat. A large part of their time is necessarily spent in follow-up and prophylactic work, which, of course, overlaps into social service, or is, rather, medical social service, here as everywhere.

There remains the friendly visiting, in which humor and pathos are so strangely blended. One becomes accustomed, alas! to the poor hovels, and to the tale of medieval enslaving which Germany practiced here. But when a white-capped, trembling mother tells you of her daughter, just seventeen, so lovely, with curls so thick that when she went to Ham to market everyone turned to look at her, taken as slaves used to be taken in Africa-the scene lives before your eyes. She shows you the picture of Charmante at her first communion; of the neighbors of the village (a picture which she tore out of its frame on the night of her flight); of one son a prisonnier civil, of another, a soldier who has died. Besides the pictures, she has saved some tiny cups which hang on the wall. She takes one down, dusts it, telling how she found them in the ruins on her return. "I am fortunate," she says. For those cups she would not take a fortune. They belonged to Charmante. of whom she has heard nothing since the night the soldiers dragged her away.

One wonders, in the midst of the common misery, how the bereaved mothers keep their reason, or care what happens next. But they have always the hope of the unannounced return of their loved ones. One of their requests which is hardest to refuse is for extra beds and covers against that return. It must be, too, that a disaster so universal has a steadying effect. On a smaller scale, the life of a village, its work, its gossip, its petty unkindnesses and its neighborliness, continue as of old. That we may stimulate the normal living condition of our sixteen villages is the aim of the Smith College Unit in the Somme.

# Keeping Families Together

## The Domestic Relations Court as an Offset to the Divorce Court

## By Mary H. Hendrickson

PROBATION OFFICER OF THE MUNICIPAL COURT OF PHILADELPHIA

In these days when the family tie seems to be held so lightly, it is interesting to know how much influence a court of domestic relations may have in preserving the family unit. To throw some light on this question a careful study has been made of the reconciliations effected in the Philadelphia Domestic Relations Court during the vear 1916.

Soon after its establishment, this court, which is a branch of the Municipal Court, began to strike its roots deep into family life. It stands for the defence of the home and seeks to stay the devastations of the Divorce Court. When a warring couple appeal to it, an effort is made to help them to adjust their difficulties so as to restore harmonious family life, or at least to preserve the family unit. In many instances, after both husband and wife have been given a sympathetic hearing, the admonition and advice of the agent of the court are successful in bringing about a reconciliation, that is, a decision on the part of the heads of the family to make one more effort to preserve normal home life. If this fails and a court hearing follows, the judge is ever mindful of any softening influence or any evidence of relenting on the part of either husband or wife. Sometimes a little child's evident affection for both parents furnishes the occasion for fatherly advice, which induces the estranged pair to shield the child from the evils of a broken home. If the parents cannot then and there decide so weighty a matter, the case is continued on probation for reconciliation. Then the outside probation officers take up the work, and by acting as go-between for a period of several months, if necessary, often succeed in reestablishing the home.

But are these reconciliations lasting? May not the family again disintegrate?

Records in which the word "reconciliations" appeared to close the case numbered 1,002. An examination showed that 190 of these had come back to the court for reconsideration and therefore could be put down at once as "not lasting." The remaining 812 were followed up. The visits were made at a time when the most recently effected reconciliation had had a chance to last at least six months, the average period clapsing being one vear.

In spite of handicaps, 725 families were located. Our workers found much that they could do to help. For example, women who thought that by giving their husbands another chance they had closed their cases for all time, were told that if the men did not live up to the promises made at the time of the reconciliation, it was their privilege to make another complaint.

In two or three instances the court representatives met a man who was resentful and defiant. One of them went so far as to say that "he would lie in his grave before he would let anyone, even the judge, tell him what to do," but with these few exceptions, our workers were very kindly received and many were the expressions of gratitude and appreciation for the interest shown.

In 120 cases husband and wife had separated, though they had not come back to court. These, added to the ones whose written records showed "not lasting," made 310 not lasting at the time of the investigation. Of this number, thirty couples again decided within the year to give each other one more chance. This illustrates the constant shifting and changing wars of these become.

There were left 605 reconciliations, or 67 per cent, of all whose records were known. In many instances this meant little more than that the heads of the family had learned that it was cheaper for them to live together and that they were putting up with each other for the sake of the children. Some were holding together because of fear of the court. One woman stated that she made her husband believe she had to report every two weeks for six months as to how he was treating her, and laughingly added "you have to do something with these men."

#### Genuine Reconciliations

ALTHOUGH there were unsatisfactory home conditions in many cases, there was also a large number of genuine reconciliations, where husband and wife were living happily together. "He is altogether a different man," "Everything is all right now," "We have both learned a great deal," "I do not believe there will be any more trouble" were expressions which frequently cheered the heart of the probation officer. Four women stated that they were so happy they had really forgotten it had ever been necessary for them to appeal to the court, and one colored woman said that "she tanked de Lord He lead her to dat dere court."

In many instances the unhappiness in the home was eliminated by discovering and removing the cause of the trouble. An illustration of this is seen in the case of a Polish couple who had been living together in commonlaw relationship. The man drank and did not support his wife and children. He was found to be physically unfit for work and had been turned down by several firms. This man was persuaded to go to the hospital. The cooperation of the Society for Organizing Charity was secured, they giving temporary relief to the family, and after recuperating from an operation, the man obtained work. He is now giving his wife from \$17 to \$20 a week. The reconciliation between them resulted in a marriage ceremony, thus showing that they were becoming Americanized. The expression of blank despair on the face of the woman has given place to one of quiet happiness.

In some instances where the economic condition was the basis of the family trouble, the whole problem has been solved by our employment bureau. Thus one of the earliest reconciliations of 1916 was effected by getting the man employment, and it was at least seventeen months later that the family again came to our attention. The husband had been ill; work in his line of business was slack and the family was again involved in financial difficulties. The probation officer secured more lucrative employment for the man, also part-time employment for his wife, so that she might add to the family income as well as attend to her household duties. Again all was well in this home.

[Continued on page 606]

## FLORIDA SURVEYED FOR WAR AND PEACE

WHEN Governor Sidney J. Catts of Florida saw last September the social welfare program that two investigators of the Russell Sage Foundation had prepared for West Virginia at the request of the governor and Council of Defense of that state, he telegraphed to these investigators to come and subject Florida to the same friendly scrutiny. The investigators were Hastings H. Hart, director of the child helping division of the foundation, and Clarence L. Stonaker, secretary of the New Jersey State Charities Aid and Prison Reform Association. Both responded, and a frank appraisement of Florida's past together with advice for her future is the result. [A Social Welfare Program for the State of Florida, 10 cents, Russell Sage Foundation.

The investigators considered, first, the ability of Florida's social welfare resources to enable her to do her part in winning the war and, second, their ability to promote the general welfare without reference to the war. The second was closely linked in their minds with the first, since Florida's plans for the war emergency ought to fit in also with her plans for the future. Thus, when they recommended state sanatoria for tuberculous soldiers they urged also that these be so located and constructed as to be available for other tuberculous patients after the war. "The truth is," says the report of the investigation, "the war activities of the state and its social activities are necessarily related because all of them have to do with the efficiency of the people."

With a mild climate, abundant food supply, and a people of simple habits. Florida has not heretofore felt the pressure of social needs. The advance in the cost of living, however, and the rapid increase of the dependent, delinquent and defective classes which come with a more complex society and which the war will augment, make it necessary, say the investigators, for Florida to make plans. She must act speedly "if she is not to be overwhelmed by the advan-508.

One of the most interesting activities

One of the most interesting activities in the state appears to be the great prison farm at Raiford. In three short years 3,100 acres of cypress swamps and other land have been cleared, drained, fenced, equipped with canals and ditches and otherwise made productive - all by prison labor. Florida has done this while no one looked on; yet she has "set a pace," say the investigators. "which no other state has yet reached." It is but another step, they think, to the creation of a "state land department" to lease or sell lands thus cleared. so that work which private settlers have refused to do would hereafter be done for them, and the question of settling Florida's great unoccupied territories would be solved.

Negro convicts are still worked in the turpentine forests, however, much to the detriment of their health, though treatment has in some respects improved. Florida seems to be unique in locating the management of her prison system in the department of agriculture. Small wonder that the reformatory principle has not yet received much encouragement. Florida makes the largest appropriation for her public health service, in proportion to population, of all states except Pennsylvania. She pays her teachers less than most—\$327 a year being the average.

The concluding counsel of the investigators is that Florida establish an unpaid advisory board of charities or public welfare, with a competent secretary.

#### TO MEASURE THE AMEN-ITIES OF CITIES

DO YOU hesitate where to locate your new million dollar factory? Here is the alluring prospectus, printed in three colors on heavy glazed paper from Smokeville, Pa., telling you of its low cost of living, its railroad facilities, its energetic chamber of commerce. That it is almost unprovided with public improvements and utilities essential for conducting business, you must find out by personal inquiry. There is also the handsome bound booklet from Sandgate, N. C., mentioning the unrivaled schools, the extent of park land, the high church membership of this "American Riviera," which give it "unique advantages for all year round residence"-but never a word about its undrained swamp which makes it almost uninhabitable for four months of the year.

As to the comparative advantages of a number of places for business or residence it would be difficult to form a sound judgment even if all the facts were known; for we have no scales of value by which we could compute, let us say, how low must be the death rate of town "A" to offset a superiority enjoved by town "B" in the matter of fire protection. An attempt to provide a statistical basis for comparison on some of the principal points to be considered in such a connection is made in a study of American cities by students of Reed College, in Oregon, under the direction of Professor William F. Ogburn, the results of which are presented in unconventional spelling as Social Servis Series Bulletin No. 3 of said college.

Civic reformers have given an efficiency rating to almost everything within the sphere of municipal government that can be made susceptible to the process. They have hitherto shrunk from applying the test to city government as a whole, from ranking cities according to a mathematical formula. Reed College thinks it can be done, has done it and presents a table giving the rank of cities—but we are left guessing

how the credit numbers for each item have been arrived at.

Thus, Seattle and Salt Lake City share the honor of first place in the summary table with a total of 215 points, while Birmingham comes last with 523. It is doubtful, however, whether employers from every part of the country will flock west (Denver and Los Angeles rank third and fourth) as a result of this disclosure; for, high wages, a small proportion of child workers and of foreign-born unable to speak English are listed among the credits along with low cost of living, low death and infant mortality rates, large proportion of population married, church membership, extent of park area, public properties and the like.

William T. Foster, in a foreword to the study, admits that this ranking is open to a number of objections, one of them being, of course, that the eighteen categories measured are not of equal importance, and leaves it to the reader to weight the summary in any way that pleases him.

When we come to comparisons on particular points, this statistical study provides many suggestive data and provokes questions to which further and more detailed studies alone can give the answer. Is there any direct connection between the exceptionally low death rates of Seattle and Portland and their high marriage rates? What is the relation of both to the low illiteracy rate in which also they excel by several points? Are the high wages of these two citiesin which, with San Francisco, they take front rank-cause or effect of the other symptoms?

Charleston, with the lowest wage rates and the highest death incidence. belongs to the eight cities (out of thirty-six) with the highest cost of liv-

ing; only two other cities have less public property, in dollars per inhabitant, only one (Birmingham) circulates fewer library books; its school attendance is worst; it pays its teachers an average salary of \$540 a year (twofifths the salary paid in New York and Seattle), and is the most illiterate of the cities. Yet - Professor Fairchild please note-it has the lowest proportion, with the one exception of Jacksonville of foreign-born white population unable to speak English,

The fact that, in most of the important respects, the western cities are in the first quarter and the southern cities in the last quarter seems to provide an irrefutable answer to those who would trace every evil in the land to the immigrant population. The middlewestern cities, with their large proportion of foreign-born unable to speak English, take an inconspicuous position in the middle background or vary widely in matters where, according to the restrictionists, the presence of the foreigner should produce uniformly bad results.

#### RE-EDUCATION FOR SOL-DIERS AND CIVILIANS

OMPREHENSIVE plans for the vocational re-education of disabled soldiers and sailors are contained in a bill already drafted, which it is understood the secretary of war will cause to be introduced into Congress shortly. The draft of the bill became public when Senator Hoke Smith called for all the reports of the Federal Board for Vocational Education on this subject. Incidentally, these reports show how big will be the need for this education. in the view of the board. It estimates that in the first year after our armies begin to fight, 100,000 men will be disabled, of whom 20,000 will require total or partial re-education. Forty thousand will need it the second year and 60,000 the third. This estimate is based on the sending of a million men to Europe the first year.

The proposed bill applies to both men and women disabled in the line of duty. All claimants to benefits under the soldiers' and sailors' insurance act may be ordered to take this re-education by the Bureau of War Risk Insurance. Other disabled persons may do so, if they want, free of cost. The instruction is to be available, moreover, to disabled civil employes in the employ of the government, upon the request of the United States Employees' Compensation Commission, and may be made available in the discretion of the board to any other person, disabled in the course of employment or otherwise, upon request of any state compensation board, other state organization, or any corporation, association, firm or individual.

The bill creates a board for vocational

INFANT MORTALITY BATES of Infants under one was old nor 1886 hore

rehabilitation, to be composed of one representative each of the Treasury. War, Navy and Labor departments and of the Federal Board for Vocational Education. Three advisory committees are authorized, one on agriculture, one on commerce and manufacture and one on labor. Members of the board and of committees serve without pay,

It is to be the duty of the board to make plans for vocational rehabilitation: to establish courses and, if necessary, schools, for that purpose; to provide classes either directly or in cooperation with existing schools and industrial plants; and to prepare teachers for vocational rehabilitation. Necessary medical treatment will be looked after by the surgeon general's office of the War Department. The bill appropriates \$10.-000,000 to carry out its provisions.

#### THE SUPERSTRUCTURE OF A COMMUNITY

HE Survey of Social Agencies of Alameda County, California, just published, looks like one of those formidable and incomprehensible printed documents with which assessment boards or zoning commissions from time to time add to the world's literature. There are long tables of names and descriptive items marshalled in columns; there are maps; and the whole thing is folded in the middle as though the printer had given up the struggle to produce pages of a manageable size.

The County Board of Public Welfare, some of the leading social workers of the county and students of the University of California share with Jean Howard McDuffie the guilt of producing such a volume-and the credit. For. let us hasten to add that when, summing

THE LITTLE GIRL WITH THE CURL ON THE COVER

up all your courage, you turn the pages, you discover that this is really a most impressive statement of facts concerning the delicate structure of public and private agencies built up in the county to render social service.

The survey was made both for the practical purpose of providing those engaged in social work with accurate information on everything they ought to know concerning forces already at work upon the problems which interest them, and for the academic purpose of presenting a picture of these forces as a whole and of measuring their activity against the social needs of the community. There are special articles on the different aspects of poverty and social maladjustment, a very full directory, a digest of laws applicable in the county and other features.

Alameda county includes Oakland, Berkeley and several other suburbs of San Francisco, so that this substantial review of its social resources should be of value to the growing number of social workers in the East who are looking towards the West for new ideas and methods of public welfare activity.

# MAKING A TUBERCULOSIS

Table Re was a little girl who had a little curl right in the middle of her forehead; and when she was good she was very, very good—but there that story ends, for it was in this happy mood that she was caught by an organi-

zation with the formidable name of the Commission for the Prevention of Tuberculosis in France of the Rockefeller Foundation, and made to gloat on the cover of the primer, Aux Enfants de France, which the commission is scattering abroad in its campaign jointly with the American Red Cross to fight tuber-

PROFITEZ DU GRAND AL

culosis and infant mortality in France. An ordinary delivery automobile trundled out of Paris on the morning of January 5, the names, in French, of the Children's Bureau of the Red Cross and the Commission for the Prevention of Tuberculosis painted on its sides. After mishaps on stormbound roads it reached Chartres, the city in which Pasteur began many of his famous studies and discoveries, where the first test was to be made of the traveling exhibit which is to go to many French towns and villages to press home in as effective and pleasant a way as possible urgent and unhappy truths-as that a Frenchman or Frenchwoman dies of tuberculosis every six minutes.

The prefect of the department of

ÉVITEZ LES LOCAUX SURPEUPLÉS

Eure and Loire and the mayor of Chartres were pattons of the conference held next day in the beautiful municipal theater, with the municipal and in attendance. The city had been plastered in advance with posters of the vanquished eagle of Prussianism, drawn by the French artist Dorival as his contribution to help this American propaganda in France. Within the theater, solenn babies emerging from the cabages, which French infants prefer to storks, looked down from the walls and

pointed chubby appealing fingers at an audience which filled every one of the thousand seats. A delegation of Americans, headed by Dr. Livingston Farrand, chairman of the Rockefeller commission, and Dr. William Palmer Lucas, chief of the Children's Bureau of the Red Cross, had come from Paris for the occasion.

The prefect gave an address of welcome, after the municipal band had played the Marseillaise and the Star Spangled Banner. Dr. Farrand replied. A French account describes his words as "covered with acclamations." Then Dr. Mery, a professor at the University of Paris, and a native of Chartres, gave a talk on infant hygiene, illustrated by a moving picture film of a healthily protesting baby. Between the acts the band played again, and then there was a talk on the nature and spread of tuberculosis, illustrated by moving pictures which showed terrifying microbes and aimed to make children and mothers familiar with the many ways which they can devise to

NE VOUS SERVEZ PAS DE PLUMEAUX

do damage. At the end booklets and postcards ("coquertishly edited," says the French account) were distributed, the band played America and the families went home.

France has seen enough of the terrible faces of truth; the lessons brought by the American automobile probably will be remembered the longer because they came with smilling faces which made the unforgettable facts easier to think about. More than two hundred and fifty persons came on Monday to see the serious educational panels hung in the rown hall.

The automobile, with its reels and posters of smiling babies and sterner pamphlets on the care of tuberculosis, of babies, and of mothers, stayed in Chartres for four days while the panels hung in the town hall and were explained to visitors by one of the American Red Cross women who knows the French of the French. Then it started on—not to follow a rigidly bound itinerary but to go as weather, roads and gasoline permitted to the villages of Eure and Loire.

"We cannot but encourage and wish success to our American friends in this carefully worked-out undertaking," the French account concludes. "Its results will increase still further that debt of the heart which France feels toward the United States."

#### PROPORTIONAL REPRESEN-TATION IN ECLIPSE

WELL may political wiseacres shake their heads. Here is the House of Lords introducing a decidedly liberal amendment to the reform bill pro-

viding for a moderate, safe and saneplan of proportional representation; and the House of Commons, having rejected it once before, again defeats it by 223 against 113 votes. The sponsors of the amendment in the House included such deep-dyed conservatives as Mr. Balfour and Lord Robert Cecil; among the opponents we find Mr. Asquith.

Austen Chamberlain, until recently a member of the war cabiner, on January 30 led the opposition. He said "P. R." would create unwieldy constituencies of 100,000 electors and make it quite impossible financially for small party groups to contest them. The intimacy which now often exists between the constituency and its member could not be maintained. The majorities would be small and the government consequently unstable. Mr. Asquith's objections

were entirely of a technical nature. Lord Robert Cecil showed that the "strength" of a government resting on an artificially exaggerated majority, under the old party system, is really undemocratic and that the unrepresentative nature of Parliament had lowered the high popular esteem in which it had been held in the past. Sir Charles Bathurst thought the measure would give a fairer representation to farmers; but Walter Long, another conservative representative of rural interests, was strongly opposed.

#### THE UNREASONABLENESS OF CONSUMERS

RECENT inquiry on the East A Side of New York city showed that the price of grade B milk had in less than half a year risen from 10 cents to 14 cents. The best milk, grade A, which many physicians consider indispensable for young children, in less than a year rose from 11 to 16 cents. Some dealers sell less than half the quantity of milk they sold a year ago. The majority of the people buy "loose" milk at 11 cents (which a few months ago only cost 8 and 9 cents).

A survey made in October by the city's health department with the aid of private organizations showed that the total amount of milk purchased by 2,200 families, typical of the poorer sections of the population, with 5,438 children under six years of age and 2.534 children between six and thirteen, has in one year decreased from 4,797 quarts daily to 3,193 quarts, i. e., by one-third. "The present high cost of milk," says the report, "menaces the health of the people."

"The extent to which milk is consumed in New York state in the next month or two," the State Food Commission in Albany now announces, "will decide very largely the production of milk in this state for several years. . . . There is tending to develop a milk sur-

plus which probably will result in the slaughter of dairy cows by the farmers and a decreased production for years to come.

The State Agricultural College at Cornell has prepared a collection of milk menus and milk recipes under the name, Milk as Meat and Drink, to be circulated by the State Food Commission. There is to be a vigorous campaign to show the housewife the nutritive value of milk and milk products and to convince her that the rise in the price of milk has not been as great as that of other articles of diet.

There is a movement on foot, it is understood, to supply the State Food Commission and the Home Economics Department of the State College of Agriculture with textbooks of elementary economics. In the meantime, that un-

reasonable animal, the consumer, must bear the blame for the decreasing herde

#### SEEING A JAIL FROM THE INSIDE

HE other day three men were charged with murder in Washington, D. C. They had been prisoners in the District of Columbia workhouse at Occoquan, and one of their number had killed the guard who tried to prevent them from escaping. At the trial the charge was changed to felonious assault with intent to kill. One of the three turned state's evidence and his case was dismissed; a second was acquitted by the jury; and a third, who had actually struck the fatal blow, was let off with three months in jail.

Why was such leniency bestowed? The reason assigned by the attorney for the men is that they took the jury into their confidence in regard to the treatment they had received at the workhouse. One said that he had been strung up by his wrists for several hours so that his heels were off the floor. Another said that he had been brutally beaten by guards. Other mistreatment was described. One of the jury declared later that if the prisoner who struck the blow had not admitted it he. too, would have been acquitted.

The suffragists who have picketed the President have made the Occoquan workhouse famous. The SURVEY has

Nesc York Evening Post

"OVER HERE!"

Burned at the stake: Lignon Scott. Dyersburg, Dec. 2, 1917; Jim Mc-Ilhon, Estill Springs, Feb. 12, 1918. President Wilson has promised the National Association for the Advancement of Colored People that he will direct the attention of the attorney-general to the action of the Tennessee mobs.

received an affidavit, sworn to by one of their number and understood to be part of the evidence on which suits against the management of the institution are being brought, describing some of the conditions there. Mary Winsor, of Haverford P. O., Pa., is the signer of the document, which was executed before a notary at Ardmore. Pa., on November 23, last. Miss Winsor was a prisoner at Occoouan from September 6 to October 21

The affidavit criticizes first the hospital and medical attendance at the workhouse and declares that "precautions against infectious skin diseases were inadequate." "I saw," swears Miss Winsor, "in the sewing room and dormitory, using the same toilets as we did, an elderly woman (white) whose arms were covered to the elbows with sores, and sores were visible on her neck. She remained with us for over twentyfour hours."

The hospital seemed to be used chiefly as a prison, says Miss Winsor, To quote:

A group of suffragists, both sick and well, including Miss Lavinia Dock, of Pennsyl-vania, and Miss Lucy Eving, of Chicago, were shut up there during the greater part of their stay at Occoquan, apparently to prevent them from communicating with group. Mrs. Kendall was there in solitary confinement for eighty hours with no tooth brush, no water to clean her teeth or wash in, no night gown, no sanitary conveniences except an open bucket, three slices of dry bread a day and three cups of water, served in a paper cup so leaky that most of the water ran out. Mrs. Margaret Kessler, of Colorado, though ill with a complaint which had been in part the cause of her father's death, was turned out of the hospital in the cold and dusk of the evening and taken back to the dormitory, supported by a matron, as she was too weak to walk. This was to make room for other suffragists, eleven of whom, though not ill, were imprisoned under lock and key in the hospital (as a punishment for refusing to work) from Monday evening, October 15, to Sunday morning, October 21 when we were transferred to the District jail.

As to the food, Miss Winsor says:

From Friday, September 7, to Thursday, October 4, we had as breakfast-food, rice, hominy, or oatmeal, twenty-three times. Out of these twenty-three times we found worms ten times-the largest collection of worms at one meal being fifteen worms. We had worms and rat dirt combined twice, and scorched oatmeal five times. The breakfast was badly and stupidly served, each person's was nadiy and stuping served, each person's plate being filled and then the prisoners brought in to the dining room; in conse-quence the food was cold by the time we arrived at the lable. Although there was a large herd of perhaps seventy-five cows on the farm, no butter or milk to drink was ever served to prisoners. The small quantity of milk on the breakfast food was condensed milk. During this period the meat was tainted or rancid seven times, and generally so tough that it could be chewed only with difficulty. Tomatoes were served twenty-one days, always once and often twice a day. The soup, which with bread was all we had for supper, was made out

of the remnants of the dinner and was therefore merely dinner over again, only much a greenish-gray sediment arose from the bottom. Sometimes the soup was made of peas or corn, which were almost raw. Miss Mar-garet M. Fotheringham, of Buffalo, who is a registered Red Cross dietitian and a teacher of dieteries in the public schools of Buffalo. kept some of the peas from her soup. When dried they were hard enough to use in a pea shooter. Everyone hated the soup. Scarcely a night went by that some woman in our dormitory was not ill from constination, pain in the stomach, vomiting or diarrhea. on Sunday, September 23, we broke open Miss Maud Malone's ginger cake and found in it a dead fly and a piece of newspaper with the word "Congress" distinctly legible. The corn bread was uneatable; it was heavy. soggy and of a greenish-gray hue within.

The annual report to Congress of the Board of Charities of the District of Columbia, just out, devotes several pages to the pickets. This board has supervision over the Occoquan workhouse. Referring to the picket-prisoners, the report says:

These women from the first were not amenable to the modern human principles in operation at Occopuan. Their persistent disregard of rule, their refusal to work, their open defiance of authority, and their acts of violence and rebellion finally compelled their transfer to the District jail for safe confinement in cells.

A letter from George S. Wilson, secretary of the board, to the district commissioners, written October 18 and printed in the report, says:

As stated, they lithe picketal are at present, because of a refusal to obey rules and direction, and especially their refusal to perform the work as assigned them aforeasid, placed in rooms in the hospital (that institution being at present entirely free from occupation by sick or invalid prisoners), and one in a room in the officer's quarters, where every consideration is given them, this segregation being necessary to misgate the evil influence upon other prisoners of a permitted violation of the rules of the institution.

Under all of the circumstances, the board believes that these prisoners are not in a position to ask for any privilege and that none should be granted so long, certainly, as their conduct as above stated continues.

#### GRAPPLING WITH VENEREAL DISEASE

COMPREHENSIVE program for the care and control of venereal disease has been launched in the Bay State. The State Department of Health has just required that syphilis and gonorrhea be reported, as are other contagious diseases, with the important exception that the reports are to be rendered to the State Department of Health instead of to the local health boards, and that only the age, sex, marital condition, stage of disease and occupation of patient are required-not the name and address. But when a patient in an infectious stage of either disease fails to remain under medical treatment for a period of six weeks, the doctor or institution previously reporting the patient must

### The Miracle of the Marne

The battle of the Mame halted the rush of the Germans towards Paris. It aroused the French to superhuman bravery. They fought as if led by the spirit of the Maid of Orleans herself.

The Marne was a demonstration of the power of patriotism with its back against the wall. The same sacrifice of self, the same love of country and unity of purpose that inspired the French people must inspire us and wemust win the war.

We are sending our best manhood to fight for us. They must be armed, fed and clothed, cared for through sickness and wounds. This is the work of every individual as well as the Government.

It is the proud duty of the Bell System to coordinate its purpose and equipment to the other factors in our national industrial fabric, so that the manufacture and movement of supplies to our boys abroad be given right of way.

Universal Service

then report to the State Department of Health the name and address. The state department will thereupon furnish the facts to the board of health of the locality where the person resides, as the local board possesses the police power through which treatment or isolation can be enforced.

But reporting goes only a little way and might, some fear, defeat its own purpose by drawing the disease under cover. Steps are to be undertaken, therefore, to prevent this. A general system of clinics for the treatment of synthilis and gonorrhea is in process of organization. Meetings have been held in different parts of the state to organize local clinics, and four of the leading institutions in Boston, now maintaining such clinics, have been brought into conference with a view of coordinating their service with the program of the State Department of Health. Standards for the maintenance of such clinics are about to be promulgated, under which clinics may be placed on the approved list of the State Department of Health, and be entitled to act as centers for the use and distribution to act as centers for the use and distributions.

# Public Ownership League of America

Organized to secure the public ownership and operation of railroads and other public utilities and natural resources.

This League has available for free distribution a pamphlet containing highly interesting information derived from official reports of the Interstate Commerce Commission, giving results of investigations concerning the inside finances and management of four great railroad systems under private ownership.

At no time in the history of the world has legislation of such colossal interest been considered as that now pending in Congress respecting the railroads, upon the just solution of which the future welfare of the American people will largely depend. The question of actual and permanent government ownership may be the issue in the coming campaign. It therefore becomes the duty of all citizens to inform themselves thoroughly on government ownership, and to this end the question should be studied and debated in colleges, schools and associations as well as by individuals.

The Public Ownership League of America has for its object the furthering, by every means in its power, the government ownership of all public utilities, and solicits the opportunity to disseminate informa-Write to Albert M. Todd, President, Westory Building, Washington, D. C.

### LABOR SHORTAGE?

Is it a real grievance? A careful analysis of the situation, including the aspects of distribution, wages, labor surplus, by a scasoned student of industrial affairs and a former employment exchange manager,

WM. M. LEISERSON

OF TOLEDO UNIVERSITY One of many articles of prime significance at this time, announced for early publi-

The SURVEY

tion of arsphemanine, the new product manufactured in the laboratory of the Massachusetts State Department of Health as a substitute for the German salvarsan in the treatment of syphilis. Legislation is pending to give the State Department of Health money to subsidize clinics so as to assist established ones to enlarge their work, and to aid smaller communities in starting clinics. need for this may be illustrated by the fact that outside of Boston there is only one city in the state of Massachusetts now maintaining a clinic for the treatment of syphilis and gonorrhea. It is hoped that at least a dozen clinics will be under way before the end of 1918.

The manufacture of arsphemanine has been under way for nearly two years, as a result of an appropriation granted by the state legislature; but owing to many difficulties and delays, the product is only now produced in sufficient quantities for distribution. In the beginning it will be for the use of infectious cases only, because of limited supply. As it will be distributed by the state without charge, it will greatly reduce the cost of effective treatment of syphilis. The German salvarsan and the American-made products which have developed since the war have cost from two dollars to four dollars a dose, and many doses are often required. The approved clinics, each in an assigned area, will act as centers for distributing the "arsphemanine."

A bill has been introduced to prohibit the sale of medicine for venereal disease by drug stores, except on the prescription of a physician. Self-treatment for those diseases is a serious evil, for such treatment is not effective and the sufferers are likely to progress into later and much more serious stages of the disease, besides remaining centers for disseminating infection. Plans for linking up this health program with the campaign for the suppression of prostitution are also under way.

#### WINDING UP THE FUSION ADMINISTRATION

HE work of municipal child-placing in New York city by the Children's Home Bureau of the Department of Public Charities is now completely in the hands of the new Tammany administration. The work accomplished by the bureau under the Fusion administration was described in the SURVEY for January 19 [Mothered by the City]. The apprehensions of civic bodies and individuals that it would not be continued on the present high standards have, inthe opinion of these bodies, been confirmed by the resignation on February 28 of John Daniels, director of the

Mr. Daniels, it will be remembered. was a seasoned social worker who, it was hoped, would find it possible to stay at his post under Mayor Hylan. In his letter of resignation to Bird S. Coler. commissioner of public charities, Mr. 000 e Daniels states that his work of caring for approximately 900 children placed out by the bureau "has been increasingly hampered and obstructed by action taken by yourself or upon your authority." He gives six specific reasons for his resignation:

The dropping on January 3 of five of our field workers (i.e., social movenigators), including three who were serving as division supervisors, and the failure to fill these five vacancies and seven others which have arisen. . . . The stopping of the use of automobiles from the municipal garage for the servine of the serv

been wholly confined to the home-finding division of our work, and who has had practically no experience in the much more responsible work of visiting the children in the homes after placement and no previous experience whatever in supervision as regards either the work of this bureau or some similar work elsewhere.

whose experience with the bureau has almost

# THE DRAFT AND HEALTH INSURANCE

DECLARING that "health protection . . . has been raised by the war from a position deserving of humanitarian consideration to one demanding action if we are to survive as a nation," the New Jersey Commission on Old Age, Insurance and Pensions last week submitted to the governor a report urging the enactment of a health insurance law. Figures are quoted in the report to show that of 1,300,000 volunteers for the army and navy, 66 per cent were rejected on account of physical disability. Facts and opinions are presented tending to show that industry is in part responsible for this situation, and it is stated that the income of two-thirds of New Jersey's wage-earners is less than \$780 a year-a sum so inadequate as to be taken seriously as one of the contributing causes of the prevalence of disease, owing to the inability of the wageearner to purchase the necessities of decent existence.

The report calls attention to the sickness survey of Trenton by the Metropolitan Life Insurance Company in 1915, which indicated that in the course of a year every person 15 years of age and

Fifth Avenue, 34th and 33d Streets, New York

over loses 7.2 working days on account of sickness, and that there are at all times 43,000 persons in the age group mentioned too sick to work. The rejections for physical disability in the draft are cited as showing a startling amount of disease, and the report states that "males above ten living in New Jersey in 1910 cannot expect to live as long as if they had lived in the period 1877-1882."

"These facts," says the report, "are of vital concern to us as a nation, and New Jersey shares the responsibility." As to the responsibility of industry, the State

Commission of Labor is quoted as saying that "nearly fifty industrial poisons capable of producing serious and even fatal disease" are in use in New Jersey factories. Special hazards exist in potteries, snelters, tanneries, textle mills, and the hatting industries in New Jersey. Tuberculosis appears as one of the foremost causes of death in some of these industries, being responsible for as many as 56 per cent of all deaths between the ages of 25 and 34 among glass-blowers, and

#### KEEPING FAMILIES TOGETHER

[Continued from page 597]

In another family, domestic trouble was of gradual growth. The man had a good position but drank and insisted on bringing his drinking companions to the house and neglected his wife and family. The wife became discouraged, her health failed, she became neglectful of her household duties and finally decided that she could no longer endure existing conditions. Being without relatives or friends to give shelter to her children, she left them with their father and paternal grandparents. After a time, she obtained employment and a place to board with a woman, who was willing to board the children also. Habeas cornus proceedings were instituted, the children given to the mother and a court order placed on the father for their support. At last the man awoke to a realization of what he had lost, but the wife was not willing to credit his statement that he wanted her to return to him. Then it was his turn to appeal to the court, thinking that if he could again secure possession of the children it would force his wife's return. The probation officer finally persuaded him that the only way to insure a happy home was for him to win his wife, as he had won her in the first place. It was slow work, but after months of patient effort on his part, and repeated visits of the probation officer to both husband and wife, a conference was arranged, which resulted in the wife promising to return at a certain date. Some eighteen months have elapsed since the re-establishment of this home, in which both husband and wife now take pride and where happiness reigns.

The court is sometimes criticised for its leniency with the men in giving them one more chance. Nevertheless, some of the most unpromising cases have shown the most gratifying results. One man was so greatly addicted to drink that he had had delirium tremens. When home conditions became unbearable the family physician referred the woman to the Children's Aid Society, who, in turn, referred her to the Legal Aid. A lawyer connected with this organization referred her to our probation department. A warrant was issued and the man was sent to Movamensing Prison for a week to sober up. All arrangements were made for his commitment to the Keswick Colony for Juebriates. On the pleading of the man, the judge reconsidered the decision; the man was to take the pledge, and the case was placed on probation, to be reported back to court at the first indication of his drinking again. This was nine months ago. The wife states now that he has kept the pledge, given her money regularly (and "comfort" with it) and that there never is a cross word in their home. Out of his own spending money he has bought clothes, shoes for the children, and even a \$25 coach for the new baby. The home is comfortably furnished, neat and clean, wife and children happy, and the wife states that these conditions were brought about so quietly that very few of their acquaintances knew anything about their difficulties.

To summarize the results of this inquiry: 1,002 couples were reported as reconciled during 1916; of these 310 were "not lasting" at the time this inquiry was made: 190 had returned to court; 120 had not; in 87 cases families were not located. Those "not lasting" constitute 33 per cent of all located. The remaining 605 cases, or 67 per cent, were found to have lasted anywhere from six to eighteen months.

While the court in a majority of cases can be expected to compel a man to the fulfillment of his legal contract to support his family, no amount of compulsion can preserve the family unit. The foregoing inquiry has shown, however, that by infusing a kindly spirit into the court's work and trying to get at the real difficulties faced by each man and woman, this . result may be obtained in a surprising number of instances.

ranging down to 40 per cent for foundrymen, as against 31 per cent for all males. Eight other industries are named as having a tuberculosis death-rate between the two extremes named

"Conditions as portrayed have been in existence for some time," says the report. "May it not be that our laissez faire industrial policy has been at least in part responsible for the fact that half our young men cannot qualify physically when the army calls?"

There are two ways, according to the report, in which provision can be made for meeting the hazard of disease-savings and insurance. As to the former. the report intimates that not much is to be expected. It is pointed out that as long ago as 1907 Chapin found that savings were infrequent among families with an income of less than \$800."

Insurance, in the forms now available stock companies, fraternal orders, establishment funds and trade union benefit funds-is apparently to be counted on only slightly more than savings as a means of meeting the losses due to illness and disease. The health insurance carried by stock companies in New Jersey was trifling in amount in 1916. Industrial insurance covering funeral benefits only, was far more popular. Premiums collected amounted to more than twelve million dollars in 1916, and losses were paid, according to the report, at an administrative cost of 75 per cent of the premium. Mutual benefit associations in factories were almost negligible so far as health insurance was concerned, and the fraternal orders did a comparatively small health business.

Of health insurance administered by the trade unions, the report says: "Only 25 of the 111 great national labor unions grant cash sickness benefits, usually only about \$5 a week for 13 weeks, and commonly do not provide medical care. The total expenditures for sickness benefits by unions affiliated with the American Fedcration of Labor throughout the United States in 1915 were \$1,065,000. In ad-

dition, local unions of some of the nationals furnish sick and death benefits. In a state which is less than one-quarter unionized, and where but few of the unions grant sickness benefits, and few, if any, grant medical benefits, the trade union funds cannot be expected to develop immediately into a comprehensive system to cope constructively with sickness care and prevention as demanded by the present emergency."

It becomes clear, therefore, the report states, that without disparaging the excellent work that is being done by many organizations, "the medical work of the state lacks a coordinated, comprehensive plan of rehabilitation and prevention. Under present circumstances, it seems to the commission that the state would be guilty of unpatriotic negligence if it remained without a socially constructive plan for combating sickness." The commission, therefore, turns to state administered health insurance as the logical plan. Not only is this a method that will distribute the losses due to sickness. but it will undoubtedly "stimulate a lively desire to prevent sickness."

The experience of ten European nations are cited as evidence of the practicability of health insurance. Great national organizations concerned in public welfare are quoted in its favor, and it is stated that the New Jersey State Federation of Labor in its annual convention, declared in favor of "a universal system of health insurance . . in order that efficient medical treatment may be furnished to all sick wage workers, and due emphasis may be placed upon the prevention of industrial sickness.

The commission, therefore, recommends that the legislature provide by law for a system of state administered health insurance; it expects in the near future to propose a bill for its consideration. In the report, the ideas which are to be included in the bill are briefly set forth. A system of health insurance is forth. A system of health insurance is didition to cash benefits, would provide medical care and health instruction.

# WAR HOUSES THAT SHALL LAST

TO what extent shall war workers be housed in temporary barracks, to what extent in permanent home? This question was set down as the first subject for discussion by the conference held on Monday of this week in Philadelphia by the National Housing Association. It was not a question to be disposed of without many different considerations—indeed, there were as many answers, it seemed at times, as there were delegates in the room, and there were several hundred—and it was one which turned up again and again throughout the proceedings.

Mattress Protectors are necessary for cleanliness of the Mattress

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as

They protect your Mattress from all impurities and lengthen its life. A single trial will convince.

Insist on seeing our trace merk and name-Excelsior Quilted Mattress Protector-on each Pro-

[Continued from page 600]

Lawrence Veiller, general secretary of the Housing Association, in the course of time has developed a conference method of his own. He does not invite prepared papers, and every speaker is strictly held down to three minutes. By this means the opportunities for useful contributions are greatly increased and, in a heated discussion of a controversial subject, the same speaker has the chance of answering at intervals a number of opponents. That this form of conference is appreciated is clear from the fact that a majority of the best known and busiest men engaged in housing reform or interested in the war-time phases of the problem found it worth while to attend and to contribute.

It soon became clear that in their views upon the present emergency situation, two different types of temperament were bound to clash, the one desiring the immediate construction of all the houses needed to bring up to maximum strength the workers in munition factories and shipvards, regardless of the character, location or cost of the houses, we may conveniently call them the "For God's Sake" school of thought: the other more inclined to look around the whole subject, not only in general but in every individual instance, to make sure that the particular plan adopted would not only provide dwellings looking well statistically but dwellings securing maximum efficiency for those occupying them with least risk to the health and well-being of the whole community and with all possible avoidance of unnecessary cost.

On the whole, the advocates of an intelligent and consistent treatment of the emergency problem in line with the experience gained by many years' practice in general constructive housing reform held the field. This means that the conference on the whole, and the business men present quite as much as the architects, engineers and professional housing reformers, decidedly favored the building of permanent houses for family occupation rather than barracks.

Nor was this view based only on pre-war experience. A number of examples were quoted to show that the provision of temporary accommodation did not, as a matter of fact, answer the fundamental requirements at all. failed to attract the skilled mechanics who are needed in ever greater numbers from inland and from other trades; and even in the case of the less skilled, it did not hold the man to the job and did not prevent a prodigious waste from having to train a continual stream of new workers. Labor turnovers as high as 100 per cent per month were quoted as resulting directly from one of two conditions: the housing of workers in barracks which separate them from their

families, and housing at such a distance from the work-nearly always accompanied by entirely inadequate transportation-as to make necessary long and irksome journeys back and forth.

The conference was much encouraged to hear from one of the speakers that President Wilson who, when the subject of housing war workers was first brought to his attention, had favored the provision of temporary accommodation so as to avoid all complication from conflicting interests, had with a fuller knowledge of the subject become a strong advocate of building both at the shipyards and in the munition centers the very best houses for family occupation which could be erected without loss

As regards the time element, a number of speakers, both from their own experience and from that of Great Britain. had become convinced that houses to last thirty or forty years can be built in the same time as houses to last three years. assuming in both cases all the necessary structural items now considered necessary for sanitation are to be provided. On the other hand, it was generally recognized that in the case of great construction works, such as the preliminary work on plants before skilled workers can usefully be employed, a certain number of workers, chiefly those engaged in the building and structural engineering trades, must usually for a time be taken care of in barracks.

One of the more difficult points upon which no agreement was reached was how, in the financing of houses for war workers which must be built now, the margin of cost between the normal and that determined by the present excessive prices of materials is to be allotted. Many speakers were very firm in the conviction that not only financially but for many other reasons direct government construction and operation was the only way of ensuring immediate results.

With all the past delay, there was a sense of relief in view of the appointment of Otto M. Eidlitz, of New York city, to the housing directorship under the Department of Labor and the likelihood that both the bills mentioned in these columns on February 16 will be passed within the next few days, giving the director all the necessary powers, and at least sufficient appropriations to start with, for a vigorous promotion of the plans laid in the different centers.

Whether the houses when completed should be rented or sold to the occupiers was another topic upon which, in view of the well-known difference of opinion among the leading housing reformers, agreement was not to be expected. So far as actual investigations made throw any light on the subject, it seems most unlikely that any large proportion of war workers, whether they look upon their

work as temporary or as permanent, will desire to own their homes individually. This does not, however, necessitate a permanent renting basis as the only alternative. A number of different propositions were discussed which would make it possible for individual householders to acquire a stake in the community by holding a bond without lessening their mobility by owning an individual house.

The housing conference was followed on Tuesday by a conference on community development for the war, under the auspices of the American City Planning Institute, many of whose members also took part in the discussions of the previous day.

Reading lists an women's vocationa.

"Not the name of a thing. but the mark of a service"

Instead of one manufacturer's spasmodic development of his product, MAZDA Service substitutes a systematic, allinclusive study of incandescent electric lamps for several manufacturers.

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incondescent lamp manufacturing and to distribute this informa-tion to the companies entitled to receive this Service. MAZDA Service is centered in the Recearch Laboratories of the General Betterie Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trade-mark is the property of the General Electric Company.

# American Labor Out of It

### The Inter-Allied Working-Class Movement and Its War Aims

By Paul U. Kellogg

FRITOR OF THE SURVEY

AMSAY MACDONALD was speaking. Before him was a great well of pipe smoke through which you could see, row upon row, the upturned faces of broad-cheeked English labor men. Above them in a horseshoe was a gallery of cheering spectators. He stood on a drop-balcony at the end, which was like the frog of the horseshoe-at a narrow table at which sat a dozen men facing the body of the hall. There was the Belgian minister of intendence: there was a former member of the British War Council; there was an unrecognized ambassador of the latest Russian government: there were two members of the French parliament; and several times that number of English commoners. They were all labor men or Socialists.

"See us here," MacDonald was saying, and he brought down the house, "shoulder to shoulder; disagreeing; comrades in our disagreements. And when you think that the extension to this table by a few feet, the addition to these chairs by half a dozen, is all that it means to bring the International together, in the name of God, let us think of this."

In these phrases, at that first evening meeting at Nottingham, he gave delegates to the Labour Party convention a picture which stuck in their minds-which was referred to again and again in the discussions of the next three days. He had taken his fellow members in the executive of the British Labour Party and the fraternal delegates sitting at the speakers' table beside them, and turned them into what the exhibit experts call a three-dimension piece. He visualized in the chairs, the table, the men beside it, something undreamed of in the older philosophies of war, but something cherished and familiar to the gospel of working class brotherhood, as spoken in a score of tongues since the days of Karl Marx. He visualized an international labor conference in the midst of war, threshing out their differences either to agreement or to a final unbridged cleavage; an international labor conference at the time of the settlement of the war, whether it be near or far, standing out for a workers' peace.

"We do not want a peace celebrated by sobs," he went on. "but a peace with democratic songs, served by democratic

effort, built up by democratic principles; a peace maintained by democratic vigilance. It is in your power, in our power. to get such a peace.

"It is your duty to speak to those silent to maintain silence no longer, to come together, to discuss and settle difficulties, to tell the governments that the people now decree the conditions by which we may secure for all time the peace of

What he was talking of was not the attempt of Pope or private citizens in the different belligerent countries to bring about negotiations between their governments. These have failed to date. It was not the attempt of the Russians under Kerensky to promote an inter-allied government conference or of the Russians under Trotzky to provoke an international one. Both had failed. It was not the attempt of the neutral committee at Stockholm-the Dutch and Scandinavian socialists-to bring an international labor conference together. That was not permitted to meet. It was not the overtures of German labor organizations for a joint conference which have since been made public by President Gompers of the American Federation of Labor. What he was talking of was something different, the deliberate program of the British labor movement, outlined in last week's SURVEY, to begin at the bottom; to build up agreement on war aims among its own ranks; to enlist the labor and socialist groups among the allies in a common front; and then address themselves to their own governments and to the working classes of the central empires.

At the time of the inter-allied war council in Paris in January, a dry remark was made by Georges Clemenceau. the rugged figure in the political life of France since the days of the commune and before, who has been raised to the premiership in the third year of the great war,

"Napoleon was not so great as we all thought," he said. "After all, he only fought coalitions,"

His epigram put the case for the efforts now on foot to bring a far greater measure of unity than heretofore among the

allies, both in military operations and in statesmanship. It is

natural that the same forces should be at work among the working classes as among the governments. And it is characteristic that, just as the British were the last of the great European states to get their full measure of man-power and industrial capacity into swing in the war, and once in, thereafter took over the heavy end of the front; so now, after three years of slow crystallization of opinion, the British labor movement comes forward to bear the brunt of what Arthur Henderson has called the diolomacy of democracy.

There were two vacant ends to that Nottingham table. The absentees at one end were, of course, any representatives of the workers of Germany and Austria; although in the course of the evening a young woman spoke for the rebel Czech element, and hailed the British workers' message to Russia as kindred to the yearnings of their "contrades in Bohemia." Incidentally she brought news of a resolution in favor of Czecho-Slovak independence adopted at a congress of all Czech deputies from Bohemia, Moravia and Silesia, held at Prague in January, which had been entirely suppressed by the Austrian censor.

#### The Temper of the Nottingham Meeting

This absentees at the other end of the table were those of the United States. And some of the discussions at the Nottingham meetings may serve to bring our more specifically what it is that the British labor leaders have in mind in setting out to meet with the Germanic workers; what forces are at work in the British movement itself; from what it is that American labor is standing aloof. For just as they feel that war-time isolation and distance are factors which have stood in the way of any approach to the working classes of the central empires, so they feel that these same obstacles account for the present failure of American labor to be counted in alongside the Belgian, French, Italian and other allied labor groups who made common cause with them at their London conference in February.

Here let me set down one or two characteristics of the Nottingham meeting. It responded to such spirited idealism as MacDonald's. More, time and again some fiery radical from a back row would stir it into cheers. It responded less exuberantly, perhaps, but none the less just as spontaneously to homely challenges to fair play and to common sense. It threw open its doors to the representative of the Russian Bolsheviki and acclaimed the revolution; heard him rail at the "moderates," and, "moderates" themselves, nine-tenths of them, the delegates went on about their solid business in a solid way.

I have never, indeed, seen a political convention in which such pains were taken to provide for the deliberate consideration of policy. The constituent organizations had been obliged under the rules to send in in advance the resolutions they had to offer. These had been sent out from headquarters, so that both the resolutions thus offered and amendments thereto by other labor bodies were in hand in advance of the convention itself. All were published in a forty-four-page agenda and distributed at the first session. Representatives of the constituent organizations that had offered resolutions or amendments on any one subject, such as the Ministry of Health or the Soldiers' Charter, were asked to meet together in committee and endeavor to reach a joint draft, which in turn was printed forthwith and distributed to the delegates on the day for discussion of the subject. The proposal for party reorganization was put over for a month to give the constituent organizations time to debate it. The draft of the party program was put over for such discussion until next June. In the current temper of the public toward the queues outside the bake shops and meat markets, there was naturally

bitter attack upon the government's handling of the food question. But when J. R. Clynes, M.P., a labor member of the food administration, turned the tables, charged the unions with failing to cooperate in the local councils and put it up to them to work out a better scheme, he carried his audience with him.

All through the conference, sympathy for the oppressed of all nations and "grousing" against abuses at home were somehow or other, in true British psychology, linked with a matter of fact grappling with practical things. The old watch-cries against capitalistic excesses had their customary echoes, yet somehow the impression abided that here was developing something different from both rigid continental socialism and the old trade unionism—something more organic, freer than the one, broader than the other; British both in its obvious inconsistencies and in its evident downright competence.

Indeed, the pre-war preachers of class hatred were conspicuous by their absence. The old-line Socialists in England have, in truth, been split by the great war into two groups-one, the British Socialist Party, perhaps fairly analogous in its direct opposition to the war to the stand of the American Socialist Party (its offices were raided by the government and literature confiscated that it had planned to distribute at the Nottingham meeting of the Labour Party); the other, a race-hatred, jingo group-the National Socialist Party-which, unlike the Labour Party, makes no distinction between the German government and the German people. Its resolution declaring against any international conference "so long as the Germans occupy the territories they have seized and carry on their campaign of murder, outrage and piracy," was heavily defeated at the inter-allied labor conference in London last August. This last, in passing, is the present position of the American Federation of Labor.

There was a very evident resurgence of feeling of workingclass brotherhood at Nottingham, and Bolsheviki, Frenchmen, and Belgians were made to feel by the applause which followed each speaker that the things in common were bigger than the things in difference.

The delegates began with singing Connell's familiar Red Flag, which was distributed by the labor *Herald*. They did not balk nor turn a hair at the second stanza, which runs:

> Look round—the Frenchman loves its blaze; The sturdy German chants in praise; In Moscow's vaults its hymns are sung; Chicago swells the surging throng.

They sang it with the unction of a Progressive Party rally singing Onward, Christian Soldiers, but with this difference: they knew the words, and with one accord they gave the fullthroated chorus for a seventh and last time at its close, singing it standing, heads up, in a great rolling bas:

Then raise the scarlet standard high! Within its shade we'll live or die; Tho' cowards flinch and traitors sneer, We'll keep the red flag flying here.

From the gallery, before they had sat down, the call came for three cheers for the Russian revolution. They were given. Three cheers for the Austrian working class strike [then on]. They were given. Three cheers for peace. Given with three times the volume of the others. A further call from the gallery for three "boos" for the labor "comb-out" raised more of a laugh than a cheer. As they sat down, I endeavored to size up these people who had been singing, as Ramsay MacDonald had said, democratic songs, and cheering in wartime. This was not what people call a "Cooper Union crowd." A day or so later at the headquarters hotel, one member of the

government labor delegation which has since come to America, pointed with a flip of his thumb at a party of long-haired. thin-cheeked agitators at a nearby table; there was a girl with them with bobbed hair and a Socialist minister in black. "And they talk of that kind being in the ministry, eh?" he scoffed. But this hall-full of labor delegates were predominantly of another sort, with wrists as thick as his own and heads less solid. It was made up of men forty years old or older. There were a dozen hald heads in the first five rows, and as many polls of gray hair-perhaps a third of the fifty men who sat in them. And speaker after speaker who got up in the course of the three days' proceedings came to my mind when, before leaving England, one of the leading economists told me in a matter-of-fact way that there were in the Labour Party more men of capacity and experience, fitting them for responsibility and leadership in seeing England through the reconstruction period, than in either the coalition government or the Liberal

But at this first evening at Nottingham it was the fraternal delegates who spoke, and what they said is current evidence of the different angles from which the different allied labor and Socialist groups are approaching common action.

#### A Message from Stockholm

THE first speaker was Camille Huysmans, before the war secretary of the International Socialist Bureau at Brussels, and since, secretary of the Dutch-Scandinavian committee presided over by Hjalmar Branting (the Swedish Socialist leader), which has promoted the Stockholm conferences. Huysmans' arrival in England was noted in some of the London papers by the publication of paragraphs describing him as pro-German and saying that he had gotten out of occupied Belgium on a German pass. The fact that at Nottingham he was in informal and frequent conference with Emile Vandervelde, member of the Belgian ministry which is known to have turned down repeated overtures for a separate peace, is perhaps sufficient indication that, however much the two men may differ in policy, his sincerity commands the respect of his fellow countrymen.

Huysmans brought the greetings of the organizing committee of the international conference at Stockholm, the Socialists of Denmark, Sweden, Norway and Holland and that part of the Russian social democracy which is associated with them. He is of the slender student type which we associate with the "intellectuals" whether in Socialist meetings or university halls. Above his glasses was a high, square forehead with black hair thrown back. A long, thin neck upheld his high-boned face. Even when, at the outset of his remarks, he raised a laugh by saying that he was especially happy to come from Stockholm because it is a "prohibited area," there was only a momentary relaxation of the sober tension of the "The fact that I am permitted to come to Great Britain," he went on, "is a mark of the confidence which your government has in me. I regret that your government has not so much confidence in you." In explaining the activities of the Stockholm committee he said [here and later, I depend for my quotations very largely on long hand notes]:

My friends had the impression, and it was also the impression and an who is a devoted friend of British democracy—M. Baraning—that in the capitalist societies of British democracy—M. Baraning—that in the capitalist societies to crush on another, unable to have a real military result. If we had this conviction that militaring had no solution unaided in itself, then there was need of named way out. This conviction has been deepened by events. The German and Austrian armies from the east are now cast on the western front where the forces are, to a certain degree, again of the same strength.

We were of the opinion that peace, if it were to be what the workers wanted, ought to be prepared by Socialists and labor parties across the war, and drawn up in such a manner that it would endure in the years to come. This policy was not understood. I will not defend myself against what has been said in leaflets and in papers in the pear to the peace of the peace of

I know that the moderate statements of the American and English governments of late have made more impression on the German people than their governments have acknowledged. My comrades charged me to explain these points and to say that we approve the tactics proposed by British labor.

As we understand them, you will first make clear your own war sims on democratic lines. Second, these war aims will be made the basis of agreement between the working classes of the allied countries. After your inter-allied war aims are clear, your satement will come before an international meteored of sure of the working of the sure of the

In conclusion, Huysmans said:

You have a great responsibility. It depends upon you whether the International shall be the first bridge across the world; whether a new International shall come into being, greater, stronger, representing all working classes, all peoples—an International which shall be across the world what your British Labour Party will be in your own country—the leading political power.

As Huysmans represents another and earlier approach to the question of an international labor conference from that of the British workers, it may be well to set down something of the relation between the two. For, if we go back but a year we find the British Labour Party not at all taking the initiative in the matter, but rather hanging back. In January, 1917, its convention at Manchester voted against participating in an international conference as promoted by the Stockholm committee. In March last, its executive turned down an invitation from the French Socialist Party for a conference of allied Socialists in Paris; in May, it turned down invitations to consultations arranged by the Dutch-Scandinavian committee in Stockholm. It did not respond to the announcement shortly thereafter that the Russian Council of Workmen's and Soldiers' Deputies had decided to issue invitations "to the Socialist and labor parties of all nations to a conference, with a view to securing the adoption of a general working class peace policy"-other than to appoint a committee to visit Russia, which never set out.

Meanwhile, Arthur Henderson, then a member of the British War Council and one of the labor leaders opposed to an international conference, had proceeded to Petrograd on a government mission, in the course of which he met the executives of the Workmen's and Soldiers' Council and spoke to them in his capacity as secretary of the Labour Party. It was made clear to him that whether the British workers participated or not, an attempt would be made by the Russians to hold the conference. Out of his experience in Russia, Henderson came to believe that unless negotiations for a constructive peace were associated in the minds of the Russian people with their new government, it would crumple-as it later did: that many confused ideas were current in Russia as to the aims for which his fellow countrymen were continuing the struggle, and such a conference would clear them up; and that it would be "highly inadvisable and perhaps dangerous for the Russian representatives to meet representatives from enemy and neutral countries alone." On the other hand, he made it equally clear that British labor could only join in the conference if it were turned from an obligatory conference to a consultation for the purpose of exchanging views.

I made it as plain as I was capable of doing that if a conference was held in which we participated there could be no question of negotiating peace terms. I pointed out that the socialists and labor parties in this and other countries were not yet he nation, and both the social people when were responsible for negotiating actual reace them rested, on behalf of the people, the entire responsibility

I quote from his report to the special party conference held in London last August, which followed consultations between Russian and British labor leaders in London, and Russian, British and French labor leaders in Paris, at which the British reconsidered their decision to stay out of the conference; and on the other hand, its consultative character was agreed to by the others. On Henderson's recommendation and by a vote of 1,846,000 to 550,000, the executive was sustained. Henderson was charged by the prime minister with a breach of faith as a member of the War Council, and resigned; and announcement was made that the government would issue no passports to British delegates to attend the Stockholm meeting. An inter-allied conference in London at the end of August, although sixty-eight delegates representing eight nationalities were present, reached no definite agreements with respect either to war aims or to the conditions of an international conference; and apparently got snarled up over the question of minority and majority representations and votes.

#### Building Up From the Bottom

So IT was that the British labor movement started in to build up from the bottom again. And the first opportunity which offered showed the overwhelming swing of feeling among the rank and file. This was at the Blackpool meeting in early September of the British Labour Congress-the national organization of British trade unions on industrial lines. By a vote of 2,849,000 to 91,000, a compromise resolution which, as such, was put forward by Robert Smillie and seconded by Will Thorne, threw the Stockholm meeting for the present into the junk heap, emphatically protested against the government's refusal to give passports, declared that a general agreement among the working classes of the allied nations was "a fundamental condition of a successful international congress" and recommended that the parliamentary committee of the congress be empowered to "assist, arrange and take part in such a conference."

The executive of the Labour Party accepted this resolution as basis for joint action with the Labour Congress. A joint committee was created to redraft a memorandum on the war aims; a joint conference of the two bodies was held in London in December, which adopted them; the Nottingham meeting of the Labour Party in January affirmed them; the interallied labor conference in London in February subscribed to them with milor modifications.

These characteristics stand out, therefore, in the objects of the present British labor offensive: that the international conference shall be consultative and not mandatory; that it shall be perfectly clear that it is a voluntary exchange of views and not an attempt to assume government function; that it shall in no way interfere with military effort; that it provides for entering into such a conference not as a loose body of labor groups meeting for the first time in the presence of a solid Germanic delegation, but for joint action by a real alliance of allied labor; that it provides for going into the conference with a deliberately formulated program of war aims which

may be modified as to details, but in which the democratic principles at stake are nailed down.

This is at great variance with the earlier conference projects associated with Stockholm and with the Russian Soviet of last spring, which were much more binding but were unorganized. It is, however, as much at variance with the former stand-off position of British labor and with the present stand-off position of American labor as it is with the loose-jointed Brest-Litowsk meetings. These last were without any preliminary agreement among the allies; were marked by the abandonment of military activity and were conditioned on the belief of the Russian revolutionists that the German working classes would and could hold their governments up to a course which would safeguard the republic and the revolution. The strength and the weakness of the Brest-Litowsk meetings was that, as the London Spectator put it, they were like the pounding of a mailed fist into a feather-bed. Now, the British labor offensive is neither a gauntlet nor a beditiek. It is a crow-bar, offensive is neither a gauntlet nor a beditek. It is a crow-bar,

#### The Bolsheviki Program

THE Bolsheviki had a spokesman at Nottingham in M. Litvinoff, who for nine years had been a political refugee in London—a stocky, heavy-set Russian Jew with the glasses of a reader and the heavy jaw of a street speaker.

"I come before you no longer to protest against the friendship of your government with ours as in the past," he began, Rather I stand here as representative of a government the like of which he world has never seen. For the first time in history the interval of the property of the property of the property of the interval of the property of the property of the notion spread by the capitalist press that the Bolsheviki have userped power like a band of thugs. In spite of shotzage of officials do lod government, they have carried through a revolution in the most doll government, they have carried through a revolution in the most have been thrown out long aga. band of adventurers they would

The establishment of the socialist administration may seem to you miraculous in view of the economic backwardness of Russis. That has rather made it possible. The capitalist classes had not attained full power or nway over the minds of the working classes. The explains the hold of the socialist movement in 1905. It was supersead, but lived. Nor did the ward ampen the revolutionary persead, but lived. Nor did the ward adment her revolutionary superior. On the contrary, the capitalist hungering after Constantinople and Armenia increased the hatred of the working classes and increased the revolutionary energy. Theirs was a revolution not only against the Cara and his regime, but against allide capitalistics.

There was absolute silence among the upturned British faces before him, broken only now and then by hand-clapping here and there. "The Russian workers," he went on, "wanted peace as well as freedom and social reform. The Russian workers revolted not only against the inexcusable conduct of the war, but against the war itself." Here, at the end of each sentence, the crowd bust into cheers. He continued:

They revolted against the war by revolting against in authors and advocates. In the March revolution the power passed into the hands of the working classes, but they allowed it to be held by the libertals. The Bolsherkii leaders were not in Russis. They were in Siberia, many of them. Others, like Lenine and Trotky, were living abroad, unable to return owing to obstacles put in the way by the Entente governments. Therefore the only leaders were the moderate socialists who openly advocated the cry of the people for peace, for no annexations, no indemnities and the right of self-determination, but they did not earry three things out.

So the masse came into the streets again. They had had an object lesson in depending upon moderate Socialisis. This resulted in putting new men into the cabinet, but there soon became the abject slaves of the liberals. The cry for peace became a mere phrase; a badly conceived offensive was attempted; the arrest of revolutionary leaders followed; the revolution began to fizzle out.

Again the masses came into the streets. If the revolution had continued to drift in the same direction it would have given rise to the restoration of the monarchy. The laboring classes turned thir eyes to the revolutionary party which had from the first stood for the complete power of the soviets. On the night of November 7. Compress of Soldiers' and Worker's Delegates, etc. to the Russian

What were you atraid all Was it af e just and general peace, in wi Are you more atraid of democracy than of militarism?

LLOYD GEORGE-ANSWER, PLEASE!

Has the experiment of the Russian revolutionary people junified itself? I mention one word—Beres-Liouvs. There in that lite barrack town greater and more dramatic history has been made in three weeks than in three and a half years of war. The principles of no annexation and the right of people to determine their lives have been asserted in such a way as to shatter the capitalist war. Even if peace does not result from the negotiations, a revolution in Germany—and let me hope somewhere else ("Say it again," came a cry from the gallery) becomes one of the immediate possibilities. We have placed the German people face to face with their government of the control of the contro

But not only have the war aims of the central powers been exposed; the statemen of the allied countries have been forced into the open, and surely these exposures must have their effect on the minds of the workers of the world. By the publication of their secret treaties the governments have been given warning that their peoples will not put up with mere machinations.

Internally, the land has been given to the peasants; factories and lands have been put in the hands of the worker; the apartments of the rich have been made to supply shelter for the homeless; local government has been put in the hands of the sovient; beaking lishing the principle of direct election of officers. The full right of self-determination has been granted to all nationalities.

For a space of three months that is not a bad record. It is true it has not been wholly carried out into practice in the face of capitalistic sabotage. It is also true that if reaction sets in these things will be awept away. Yet is it not true that the Bolsheviki have given a demonstration to the workers of the world?

The Russian people are fighting an unequal fight, against the imperialists of all nations. They have begun a work for general peace, which allone they eanot finish. They will fail if they have not the response of the workers of all countries—those of the central powers as well as the allies. I can only asy to British labor: Seriou by your pace. I hope and trust that you will not allow thousands and millions more men to be serificed.

Thus the Maximalist ambassador was given a hearing; he was given appliause. But his speech in a sense served to demark the Bolsheviki program from that in which the British labor leaders and the allied Socialist speakers who followed were engaged upon. Like Huysmans, who preceded him, they made it clear that neither in internal nor in international procedure did they see eye to eye with him. It was with other forces in the Russian political life that they were bound by the old ties; and it was the Russian Minimalists who cabled acceptance of the war aims adopted at the London conference in February.

#### The Belgian Socialists

THE first of these speakers was Emile Vandervelde, chairman of the old International Socialist Bureau, a holder of various portfolios in the Belgian ministry and an indefatigable worker for a hundred measures to build up the efficiency and morale of the Belgian army. He was stout, dignified, middle-aged, with a close-cropped black beard and a black necktie over a white shirt. He spoke in French with a ring and modulation to his voice which had been lacking in the preceding speaker; with restraint and reserve power; a man who had argued in parliaments rather than on street corners. His emotion was less in the expression of his face than in the tone of his voice, which had a minor key and rose at one point to an impassioned appeal. How much was understood I do not know, but the spirit of the man won repeated applause.

His translator afforded a similar contrast—short, stocky, a Lincoln Steffens in black and pink. This was Sidney Webb, the English Fabian—heavy-moustached, eyebrowed and bearded, his dark hair shot with gray, contrasting with full-blooded, clean-shaven cheeks. He wore a black string to his eyeglasses and would have passed anywhere for a banker.

While listening to the Russian representative, said Vandervelde, I could not help but whish of the people of northern France and Belgium, of Serbia and the rest. I can understand the cathusiasm for peace in this fourth winter of war with privations and the wastage of youth—from the whole suffering mass of humanity goes up the cry for peace. ["Hear, hear," came from the hall.] The whole world asks for peace, but it asks—what peace? Shall it be moreasy? [Again the or, "hear peace we want—the peace of democracy." [Again the or, "hear peace we want—the peace of democracy must win a double victory—against those who threatm of the moreasy must win a double victory—against those who threatm of from shroad, and against those in our own country. The internal victory, which the Bolsheviki claim, was in no small measure due to from shroad, and against those in our own country. The internal victory, which the Bolsheviki claim, was in no small measure gained, due in the first place to the British protestriat, at whose instance a decisive and ucid reply was obtained from the prime minister of the greatest empire of the world, and found an echo two days later in the mean place of the world, and found an echo two days later in the mean able creal it will be definitely consolidated on that day when the Entente governments confirm their unanimous desire in these respects by means of a collective declaration.

But if labor is to be strong enough to secure this, he went on, it will be necessary for the working classes of the allied countries to be united in their war aims. He hoped much from the inter-allied conference—from the workers of England and the United States, along the principles which had been first laid down by Kerensky.

His reading of the proceedings at Blackpool, at Bordeau, as Stockbolm, assured him that there would be no great difficulty in the attainment of that unity. He expressed thanks that the working classes of the allied countries had recognized the right of an independent and compensated Belgium. It would be his duty to make certain reservations on the war aims of the British Labour Parry. He himself had been for the international control of the African colonies. But neverthesunder a capitalistic regime, he felt that there was danger that this might result only in the dispossession of the small countries.

It was not enough for the workers of the allied nations to be in agreement on formulas. They must be unanimous in making their program triumph by all possible means, and this was the great task which would be imposed upon the proletariat of democratic nations in the near future. The moment approached when in mutual agreement they must make a solemn appeal to the proletaniat at the other side of the trenches, asking them if they are on the side of social democracy against their masters or with their masters against social democracy.

The future of the International depended upon the answer of the German proletariat and on them rested the possibility of common action against the autocracies of the mailed fist. Liebknecht had stood for these principles. The Belgian people had stood for them—and would remain so unflinchingly. With the aid of the social democracy of Germany, or without their aid, they were resolved to fight to the end for the people's rights.

#### The French Majority

THERE followed the representatives of the two wings of the Socialist Party in France—the majority represented by its leader, Renaudel, follower of Jaurès. Tall, heavy-set, small-eared, with a roll of flesh at the back of his neck and heavy-pouched in front, he looked a French edition of Boise Penrose. He used his arms freely, pounded the table, spoke with a rising inflection, every phrase of which was an appeal, every point swelling into a torrent of words. What he said had also to be translated by Sidney Webb.

As he had listened to the Russian delegate, he said, he at first could not help feeling a certain divergence of thought between them. The workers of all countries saw on all hands

ruin and mourning accumulating, but knew they could not get out of their troubles by good will alone. It was their will to establish the rights of the people, the government of the people by themselves. They were still facing the dilemma of how. After an entire month the Russian delegation had been unable to get a single word out of the German negotiators at Brest in favor of the principles laid down by the Russians. The German armies had put their hands on Lithuania, Courland. The Russians said they wanted to have the whole people of these provinces consulted. The Germans said no. And so long as they said no, the war must go on. Like Vandervelde, he could see no other way out-the German and Austrian people must do their duty and throw off militarism. The Russian revolution laid down principles which afford a way out, but they must be given effect. General rights must be established on a proper basis through a league of nations and through disarmament. The various governments had come to support the principles that President Wilson had set forth. Thus the ideas had gone throughout the governments and peoples of the world. But upon the working classes of the world rested the responsibility to see to it that these principles were given effect. He did not want to speak of the ugly claim of the French imperialists for the left bank of the Rhine; the French Socialists had stood against it. But the same principle applied to Alsace-Lorraine. The question of the provinces taken from France could not be settled by force: it was not merely a rerritorial question, but a question of the reassertion of general rights. He contended that the people of Alsace-Lorraine should give their view and that disannexation must precede a plebiscite.

Differences there were, he went on, but those differences could well be adjusted if submitted to the judgment of the world. Germany must submit disputed question to that judgment. There and there only could true internationalism be grounded, on the lines of general rights and self-determination of the people's concern. This principle must not be a vase which can be shattered; it must be a living thing and the working classes must make it so. When the French Socialists were prevented by their government from going to Stockholm—if their government had not been blind!—that is the message they would have given.

#### The French Minority

Renaudel's address was broken fairly at the outset by a burst of cheers. It had nothing to do with what he said, but to the appearance on the platform of a well-recognized and popular figure—the belated representative of the French minority—Longuet—grandson of Karl Marx, born in London and educated there, who has spent his life in France. He is tall, spare, a bit stooped, with a long black coat and a mass of wavy black hair more suggestive of the artist or the musician than any of the men who had preceded him. He spoke in fluent English and his instant ability to get into close contacts with his listeners, their evident friendship of long standing, made altogether clear what the English workers were searching for when they passed resolutions the following day for some simple international tongue!

"This has been a year of great events," he said, "and the greatest of these has been the Russian revolution. It has been a year of trial, but a year which has given to the working class energy.

We are told that the Stockholm meeting failed. Yet when the governments prevented the meeting from taking place, how could they say it failed? The greatest testimony of its success is the activity of the working-class movement in all the countries. All the Socialist Parties are unanimous in their demand for a just and democratic peace. All agree on the big principles which the Russian revolution has put forth. All are against conquers; all against plundering; all against killing of millions for it. The effect of their stand has been shown in the recent statements of statement who are now speaking the same words that Socialists were denouted for now speaking the same words that Socialists were denouted for one of the statement of the statemen

#### Elements in the British Majority

THE session was closed by Ramsay MacDonald, who was greeted by cheers which were not to be compared with any which had gone before. Men rose in their seats to give them. Slender, square-chinned, with a heavy black moustache, with tinges of gray in his shock of hair—his was the instant appeal of the born orator. He was glad that the first note of the conference had been a not of fratternity and internationalism. He welcomed the representative of the cooperative movement and welcomed the representative of the self-government movement in India who had spoken; welcomed the spokesman for Russia still in the turmoil of revolution; welcomed the old comrades from Beleium and France. Of Vandervelde he said.

We assure him that however we may differ in some things, there is no difference between him and us regarding national self-determination; no difference between him and us that Belgium must be free and independent. If we made peace today without that, peace would be false, and in two or three years militarism would raise its head more devillab than ever before.

To the French delegates he said that if democracy is to do its work, democracy must defend the right of freedom of choice. He was glad to have heard the spokesmen for both groups because the English wanted to hear both sides and understand the French democracy and march with them. "We all want peace," he went on. "We want no patched-up peace; we want no truce. We have never had anything else. We want peace. If we had two or three more of our international comrades here, what is there to hinder us from going to our hotels tonight and beginning negotiations? Just as we have valued the expressions from France, how much more would it mean if we had expressions from the other belligerents? I daresay we would know what our disagreements then are. That would be the first step. Then we could discuss them. That would be the next step. By the end of the month, who can say we should not have reached an understanding that would mean the saving of thousands of our best blood?" Then it was that he gave as a peroration the paragraphs that were quoted at the outset of this article.

That first evening meeting was significant in bringing into play some of the men who counted for most in the succeeding London conference, held after I left England, and who will figure largely in any international gathering. To round out the showing, quotation can be made from two further speeches at the Nottingham conference, the first the presidential address by W. Frank Purdy, who represents the Ship-constructors' and Shipwinghts' Association. In the course of it he said:

Do the peace negotiations between Russia and the central empires show that Germany is willing to agree to the formula of "no annexations and no indemnities?" The military party in Germany have again assumed the ascendancy. Why? Look at the war map of Europe, and that will supply the reason. The Germans hold more territory, and that will supply the reason.

tory of the allies in 1917 than they did in 1915. While Germany still escupies these territories, a peace by negosiation would be interpreted by her as a victory for herself and her allies and would fasten militarism more strongly on the people of Germany and more strongly on the people of Germany and more strongly on the people of the British empire and the whole world. It might would take the contract of the contractive process of the contractive process of the world take they are contracted to the contractive process of the third that they accept the principles which our government and the President of the United States have now published to the world, then we must fight on. No other course is left open to us, if we value our honor as a nation and our pledged word to Relgium, the upreme assertifier, and to those who have been disabled in the war, to carry on until a clean peace is secured which will enable the peoples of the world to live in security.

#### The Long Swing of the Pendulum

The tank which was touring the English provincial towns in the interest of war bonds, was in Nottingham the week of the conference, and President Purdy was a speaker at one of the noonday meetings. He has presided with address at many of the important labor conferences of the last year in England at which war aims have been formulated and discussed, and stands at one end of the new working majority, the Independent Labour Party group at the other. So far has the pendulum swung in the last year that the 1. L. P. resolution on the war, which would have been worded down a year ago at Manchester, had sufficient votes to carry it at Notting-ham. It was shelved for the sake of unity with the Labour Congress which had already passed the joint resolution printed in last week's Survey; but as evidence of the trend of feeling of the rank and file today, it is of significance. It read:

That in the opinion of this conference the war marks the break-down of the old method of diplomacy which settled the international relations of the peoples without consolting, or even informing them; it declares that in the past the failure has not been with soldiers, but with statesmen, who have used victories to impose terms of peace which left suspicion, has and resemment behind, which were followed by military alliances and armanents, and which with the marks and imperaishint appetites; it therefore calls upon the government, if the sacrifices of the war have not been in vain, to provide or the direct representation of the organized democracy in every conference which discusses the conditions of peace, to reject war aims which give the war the character of an imperialist venture, and to ase its influence and authority in every possible way to remove the causes of war; to this end, the conference declares that no abstacle abould be put in the way of responsible representative authority in every more conference declares that no abstacle abould be put in the way of responsible representative authority in every more conference declares that no abstacle abould be put in the way of responsible representative authority in every more conference declares that no abstacle abould be put in the way of responsible representative authority in every more constitutions of the conference declares that no abstacle abould be put in the way of responsible representative authority in every more constitutions.

It is Arthur Henderson who serves as the link holding together the various elements in the new working majority. The swing to the left would have gone on without him. As a member of the War Council, he was losing his grip on the labor movement; his dismissal by the government reinstated him; and he had the adroitness to make the most of it tactically, the keenness to sense the tide, and the statesmanship to help turn the unrest and mass movement of the rank and file into a constructive program.

My first impression of him was unfavorable. This was at the Labour Party Headquarters at I Victoria street, before the conference, when he responded to an inquiry with a bit of a formal stump speech, such as he must have given a hundred times. But on the platform of the Nottingham meeting lie won my entire respect. He represents the Iron-founders' Society, as a trade unionist; has long been a member of Parliament. He is in the fifties and, with his long Prince Albert coat, his neatly slicked hair, the worn but firm marking of his face, he has not a few of the marks of the manual worker who has forged to the front either in business, public office or labor

leadership. He is a rare handler of men, with an old parliamentarian's trick of declaring in vehement speech some conservative course. He came out of every tilt on the floor of the convention on top, including one with no less formidable an opponent than John Hodge of the Iron, Steel and Kindred Trades Association, in which the latter publicly apologized. An English social worker described him as a development over any labor leader in the past—in the fact that he has the sagacity to surround himself with a group of men of parts upon whom he draws for ideas and counsel. Henderson's own contributions to the hard-thinking and clear utterance that is going forward is by no means the least of the group. Three quotations from him may well complete this presentment of the way purposes of the labor movement.

The first was at Nottingham. Here he spoke in support of the joint resolutions and the program of action set forth in them. The gist of his remarks as quoted in the English press follow:

The war has been unnecessarily prolonged because of a refusal during the last six or eight months to state the war aims of the allied course of the six or eight months to state the war aims of the allied course of the six of the si

Finally, the resolution called for facilities for attending an international conference provided that the allied labor parties reached a general agreement. If they wanted a people's peace they must be there to see that it was attained. If a conference of the government were opened tomorrow it would be a mistake if the worker's movement could not open their conference concurrently. But in order to concurrently, the property of the conference concurrently. But in order to concurrently the conference concurrently. But it was a concurrent to the conference concurrently. But in order to concurrently the conference concurrently. But in order to concurrently. But it was a concurrent to concurrently and the concurrent to concu

#### Organizing the Unrest

THE second was his statement in early February, urging the government to meet the Amalgamated Society of Engineers for conference on the application of the man-power bill, and strongly urging the workers not to lay down tools in what he regarded as a mistaken effort to force the government to beein negotiations. Here he said:

We are all weary of war. Immediate peace is the greatest need of the world. But peace cannot be achieved by one section of labor acting by itself. Peace will come when the working-class movement as a whole has discovered by conference the conditions of an honormal and the section of the working-class movement of the minimization of the working class working of the unimaginable sacrificer. The temper of the workings is most dangerous. The unvirieding

The temper of the workmen is most dangerous. The unyielding artitude of the government is bringing the country to the verge of industrial revolution, and unless a more just and reasonable artitude is adopted I am seriously apprehensive that an irreparable break between an important section of industrial labor and the government will result.

In the past, labor has responded with real patriotism, fully and freely. Is it too much to appeal to the patriotism of the government? I strongly urge the government to display a more reasonable spirit.

Hasty measures of the kind contemplated may not only embarras those of us who are trying to promote a moral and political effensive on the part of the working classes and destroy their unity. They also may give to the reactionary forces further opportunities to divide and weaken our efforts. Democratic diplomacy has begun. Pesce must be made on these terms and on no other. That is our policy. It will be presented as a moral ultimatum to the governments from an organized democracy in all the belligerent governments. I appeal in all earnestmens to the workers not to wreck the great triumph of the international working-class movement in the

field of diplomacy by a precipitate action which can only end in discrediting and defeating the democratic cause.

Following the inter-allied conference in London at which the British war aims, modified at various points as result of discussion, were subscribed to by French, Italian, Belgian, Portuguese, Rumanian and South African delegates, and at which, this agreement arrived at, plans were laid for furthering an international conference, Henderson is quoted in the cables as summing up the principles and program thus:

Our proposals, in abort, stand for the establishment of a league of antions on a firm basis, provided that all the peoples of all the countries associated with such a league insist upon international cooperation for disarrament and for the prevention of future warfare. By adopting these views the conference has declared for the absolute freedom and integrity of Belgium, Serbia, Rumania, and are concerned, be based mainly on justice and right, thus making for the permanency of a world peeds.

Those are our aims, and, I may say, our irreducible minimum, and as soon as they are secured we desire to enter into the fullest international intercourse with all the nations of the world.

We repudiate any and every attempt to institute an economic boycott, or bring about the economic isolation of Germany. We aim at securing a peace of the peoples, but the peoples themselves must be the guarantors. On these conditions not only are we prepared to earry on the war, but to see to it that we shall secure a just peace.

We are convinced this world conflict can only be ended in one of three ways—the absolute predominance of all militarism, the exhaustion of all the combutants, or by conciliation. We believe that sooner or later the last of these methods must be resorted to led the beliggerens. We are willing to negotiate with the enemy, but over with an olive branch in our hands while he clutches a sword in both of his. No, we look into the future and regard the problem with all the arcinouses and the importance it demands. Both sides must be prepared to accept a solution which will have for its main object the destruction of militarism.

Following this meeting, the French delegate, Albert Thomas, former minister of munitions, and within the possibilities, next premier of France, said:

The war aims as outlined are the absolute minimum which we will accept, and if anybody tries to foist on us a peace not embodying these terms it will mean a revolution which will not halt until justice has been secured, even if that takes fifteen years.

Vandervelde, Belgian minister of intendence, is quoted as saying—and his remark brings us to the relation of American labor to the common movement:

It is absolutely essential to have the Americans with us in our effort to enablish a basis for a democratic pears. The day when American labor will join us is surely not far distant. The United States may have been late in entering the war, but I cannot believe that the American working classes will be late in joining us in shouldering labor's share of the war's responsibility.

#### American Labor Out of It

MR. GOMPERS has stated that the American Federation of Labor did not receive an invitation to the inter-allied conference in London until February 11, ten days before it was held. Yet at Nottingham, in January, it was freely circulated that the American federation had declined to participate. Mr. Gompers called in the name of the executive council that they would not take part in an international meeting, and in his Washington's Birthday address is quoted as asying:

Shall we mee in council with these men [German labor], gaining from un our confidence, swerving us from the path of duty, trying, to influence us that the government of these democracies are, after all, only capitalistic? I have said, and I say in the name of the American labor movement: "You can't talk peace with us now. Either you smash your autoreacy, or, by the gods, we will usnow it for you. Before you talk peace terms, get back from France, get back from Belgium, into Germany, and then we will talk peace.

This sort of talk leaves the British labor leaders cold. They

believe they are at work on a procedure which will do more than swashbuckling to achieve the end Mr. Gompers desires. They understand the American feeling, as they went through it what seems to them ages ago. They are scarcely of a temper to wait another three years while American labor goes through a similar tuition. Their own experience with the grapples of government control in war-time gives them a notion of the Prussian hold upon the German workers. English labor is freer-and proposes to use its fuller measure of freedom so that the less free can act in turn. You hear little of atrocities among them. That motive, fanned too hard earlier in the war, has burned itself out. They think the common men the British are fighting against are much like themselves, caught in the grip of war, neither fiends nor made of other clay. So long as the German workers are held by powers greater than themselves to an assault upon democracy and are thrown at the western workers, so long will these shoot and he shot.

The British is the antithesis of the Russian method of bringing about a change. They do not propose to down tools or down arms at home as the method of bringing the German workers around. But how, they ask, are you to counter the German imperialists at home if allied labor does not make clear, by forcing a united unimperialist statement of war aims from the allies, that the German working classes will not be opening the way to the destruction of Germany if they revolt, or threaten to do so; how if allied labor does not make clear that it can and will hold its governments to this course; how if it does not get these things across to the German Socialist in conference? That is the way they see it.

#### The Unrecognized Delegates to America

THERE is at present in America, sent over by the British government, a labor delegation which is out of touch with the whole movement described. I was told that it was selected without reference to or consultation with the chief recognized national organizations of British labor. The British labor unions are organized industrially in the British Labour Congress with 2,500,000 members. They are organized politically in the Labour Party with 2,500,000 members. Together, these two organizations include about 4,000,000 members, and they are working shoulder to shoulder in the matter of war aims.

There is a third organization known as the General Federation of Trade Unions, which originally grew out of a strike insurance fund, and now numbers 800,000 members. The textile workers and the mine workers, for example, two of the strongest national unions, do not belong to it, and the labor men I talked with said it had no right to speak for organized labor as a whole in England. Somehow or other-possibly because of the similarity of names-the American Federation of Labor has recognized this third body as the trade union authority in England. Yet in 1917 the Parliamentary Committee of the Trade Union Congress and the executive of the Labour Party broke up a joint committee representing those two organizations together with the general federation and reformed it, excluding the federation. Its president, W. A. Appleton, is one of the government delegation now in this country.

Another delegate is identified with the British Workers' League. This is run by Victor Fisher, who was a member of the old Social Democratic Party. The league has not only attacked the Labour Party, but has announced that it would nominate candidates for Parliament in opposition in some constituencies. When this matter was brought to the attention of three well-known labor leaders who had lent their names to the league, they resigned, and at the Nottingham convention a resolution was unanimously adopted calling on all members of the Labour Party to get out of the league or get out of the party. They could not serve both. Robert Smillie, president of the Miners' Federation of Great Britain and chairman of the Tirple Alliance, the greatest labor formation in England along union lines, called the British Worker' League on the floor of the convention at Nottingham a "black-leg organization".

Meanwhile, the inter-allied conference in London, itself, de-

termined to send over to the United States a joint delegation composed of British, French, Belgian and Italian delegates. It remains to be seen whether organized labor in America will meet them half way.

The British leaders believe that they are in close step with President Wilson in their war aims. At a time when the American President is thus taking the lead in a freer and more democratic statesmanship, is the American labor movement, they ask, to hang behind those of England and the allied countries?

# Government Policies Involving the Schools in War Time

What role our schools, school children and teachers shall play in war has been the deep concern of all who have thought about the underlying effects of war upon the social system. The document here printed in full gives the answer of those who are most concerned with winning the war. It is signed by the secretary of war, the secretary of the naw, the secretary of the interior, and has been approved in its main principles by the secretaries of labor and agriculture. The document was read by Commissioner Claston to the National Council of Education at Atlantic City last week and the seven hundred leading educators there present expressed unanimous approval. The printing of copies for wide distribution is only awaiting final approval of details by the secretaries of labor and agriculture. Throughout the country the cry has gone up for war service by high school boys and girls. In presenting this statement at dilattic City, Commissioner Claston mentioned, as an example of the futile thing that this cry has led to, the testabilishing of boys' avaition corps in high schools. It is hoped that the statement will clear the air, not only in regard to what our schools ought not to do, but also in regard to what they may legitimately do to further our war purposes.

#### The Schools

CHOOL officials in all parts of the country are asking the commissioner of education and others for advice as to what the schools should do to render the utmost service of which they are capable during the war emergency. They desire to know specifically whether they can be most helpful by shortening the daily or weekly or annual school session, by closing down entirely, by continuing as in the past, or by increasing school activities in various ways.

With admirable loyalty and patriotism, the schools stand ready and eager to do their full duty, whatever that may be. The greatest need at the present time is for some authoritative statement which shall make the path of duty and service plain.

It may be noted that in 1915-16, the latest year for which figures are available, there were in public and private high schools in the United States 733,856 boys and 877,340 girls; total, 1,611,196. (Report, Comm. of Ed., 1917, Vol. II, Table 1, p. 513; Table 15, p. 527.) Of the 733,000 boys, it has been estimated that approximately 500,000 were 16 years of age and over.

#### The Administration

The entire spirit of the administration in Washington is, and has been from the beginning, that the war should in no way be used as an excuse for giving the children of the country any less education, in quantity or quality, than they otherwise would have had, but, on the contrary, that the schools should do everything possible to increase their efficiency, to the end that the children now in the schools may at the conclusion of their course be even better qualified than ever before to take up the duties and responsibilities of life. Both the present demands of the war emergency and the prospective demands

of the necessary readjustments inevitably to follow emphasize the need of providing in full measure for the education of all the people.

The President has repeatedly called the attention of the nation to the urgent necessity of this special form of conservation. He has particularly urged young people graduating from the high schools to avail themselves of the opportunities offered by the colleges and technical schools, "to the end that the country may not lack an adequate supply of trained men and women," and he assures young people who are not called to active military service that "by pursuing their courses (in school) with earnestness and diligence they also are preparing themselves for valuable service to the nation." (July 20, 1917, letter to Secretary Lanc.)

Later the President again expressed his "very urgent concern that none of the educational processes of the country should be interrupted any more than is absolutely unavoidable during the war." (January 18, 1918, letter to the Department of Superintendence, National Education Association.)

#### Conference

In response to the conviction that the time had come for formulation of a definite statement which might have the weight of a government announcement of policy with reference to the schools in war time. Secretary Lane early in February took the initiative in calling a conference of representatives of the several departments at Washington most directly concerned, for the purpose of considering the matter. These included the War Department, the Navy Department. The Department of Agriculture, the Department of Labor, the United States Civil Service Commission, and the Department of the Interior through the Bureau of Education.

As the result of several conferences the following statement

has been prepared and formally adopted as expressing the attitude of these departments. As such it is commended to the school officers and teachers of the country for their careful consideration.

This statement includes a brief outline of the most pressing needs as seen by each department concerned, followed by a summary of conclusions and recommendations.

#### The Need in Agriculture

Before the opening of the war there were in the United States about 6,000,000 farmers, and about an equal number of farm laborers. In all parts of the country there exists at the present time a serious shortage in farm labor. In some places even the farmers themselves are deserting the farms for the high wages offered in nearby cities.

Aside from casual work, chores and the like, which might be done outside of school hours, the labor of boys under 14 years of age is not a vital factor on the farm. City boys, without farm experience, are not generally useful under 16 years of age. In some lines of farm work unskilled boys can be used in part, under skilled direction. In some lines of work a bright, strong boy can step in, without previous experience, and be of use almost from the first day. There are, of course, some kinds of farm work that a boy without fram reperience can not be expected to do without training. In any case, intelligence, good health and good physical development are essential for useful service on the farm.

One of the urgent needs on the farms today is for capable women to help with the housework. Without such help, many farms could not take on additional farm laborers, even if they were available, because of the added labor involved in providing meals and lodging.

#### The Need in the Army and Navy

The army and navy do not want, and can not use, boys under 18 years of age, nor boys nor men of any age who are not strong and well-developed physically. So far as the army and navy are concerned, there is nothing more important that the schools can do than to keep going at full capacity, and at the same time to emphasize in every possible way their work in physical education. High school boys will render the best service of which they are capable by remaining in school until completion of the high school course.

As soon as the army is able to announce definitely its need of men possessing certain technical and trade qualifications, it will be necessary for large numbers of young men 18 years of age and over to respond by taking the training courses that may be provided to prepare them in the shortest possible time. But, in the meantime, nothing can possibly be gained by boys doing otherwise than to continue in school, laying the very best possible foundation for such subsequent training. If they are wanted, they will be called.

If the schools will carefully select boys having suitable physical development and other necessary qualifications, prepare them for the various branches of agricultural work, and send them out to service on the farms under proper auspices during the approaching vacation, they will undoubtedly be offering greater relief in the present emergency than would be possible by attempting to carry on any work immediately under the army or navy.

Vigorous physical training under discipline furnishes excellent preparation for civil or military usefulness later on. Such value as formal military drill in the high schools may have, however, is more likely to be through keeping the boys satisfied to remain in school than as a contribution to the immediate military strength of the country.

#### The Need in Civil Service

There is a strong demand for clerks, stenographers and typewriters, but the places can not be filled by boys and girls under 18 years of age. No advantage would accrue to the civil service in any way by shutting down the schools, or by curtailing school facilities.

Many civil service positions have been filled by drawing workers from commercial and industrial houses, and also by drawing teachers from the schools. All of the positions thus made vacant must be filled from some source. Therefore, schools could undoubtedly render a much needed service by organizing classes to train stenographers, typewriters, clerks and secretaries.

#### The Need in Industry

Many industries and commercial establishments could use capable boys and girls for various kinds of service, but government officials maintain that no emergency exists which justifies proposing any relaxation of the laws safeguarding the working conditions of young people.

Still more serious labor shortages in industry are anticipated, but boys and girls under 18 years of age should not be used to make up these shortages any more than can possibly be helped. It is easier to provide approved working conditions on the farm than in the mill or factory.

### SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS

 Conditions in different sections of the country are so diverse that no detailed policy will be uniformly applicable.
 Only general policies and principles may be adopted for the country as a whole.

#### The Elementary Schools

2. There appears to be nothing in the present or prospective war emergency to justify curtailment in any respect of the sessions of the elementary schools, or of the education of boys and gifs under 14 years of age, and nothing which should serve as an excuse for interference with the progressive development of the school system. Teachers and pupils may be encouraged to find ways of performing in the schools some service having war value, such as activities connected with the Junior Red Cross, war garden work, Boy Scouts, war thrift work and the like. Opportunities should be found to introduce into the school activities having real educational value, which at the same time link up the public schools with eideals of service and self-sacrifice actuating our people, and bring home to the consciousness of teachers, pupils and parents the essential unity of the nation in this great crisis.

3. In the country and villages, all girls under 14 years of age, and all boys under 12, might well continue in school through the summer, wherever the condition of the school funds makes this at all possible.

4. In the cities, there would be no interference with the supply of needed labor if all children under 14 continue in school to the end of the regular session, and through the summer as well; and there would be but little interference if all children under 16 continue in school.

#### The Secondary Schools

5. One of the places in which there appears to be immediate demand for modification of the high school program is in respect to the need for agricultural labor. Much valuable service can be rendered by carefully selecting and training boys to assist in meeting this demand. It can not be too strongly urged, however, that each puil's case be considered.

individually, and no pupil should be excused from school for this purpose except with the written consent of the parents, to accept specified employment for a definite term, under responsible supervision by the school or by other approved agencies of the conditions of employment.

6. It would be helpful in cities, and especially in industrial communities, if for boys and girls over 14 years of age in or out of school there could be introduced certain definite courses looking toward a cooperative half-time plan of school attendance and employment throughout the year.

#### In General

7. In general, it is believed that wherever school boards can find the means, the present emergency is an opportune time for readjusting the schools on an all-year-round basis, with a school year of 48 weeks, divided into four quarters of 12 weeks each. The schools would then be in continuous operation, but individual teachers and pupils would have the option of taking one quarter off at prearranged periods for needed chance.

8. If it is not practicable for the schools to change at once to the all-year-round program, a much-needed service can be rendered in many localities by organizing special summer and evening classes to train young people for the civil service, and to train stenographers, typewriters, clerks and secretaries for the commercial world. In many communities will be found numbers of adult women who are free to avail themselves of special training to fit for various kinds of positions in office and clerical work, taking temporarily the places of men called to the colors or to other employment.

9. Some schools should consider the possibility of arranging a schedule for certain groups of students having a definite prospect of service, in accordance with which the summer months would be spent in school, leaving the students free to

work on the farms during planting time in the spring and again during harvest time in the fall. In still other cases, particularly in the smaller communities, time may be secured for farm work by omitting the usual spring vacation, by holding school on Saturdays, and otherwise speeding up and thus completing the term's studies some weeks in advance of the usual date for closing the school.

10. Special programs of the types suggested in the preceding paragraph should be reserved in general for individual students or specially selected groups of students who have definite plans for proper use of the time thus taken from the school. In no case can justification be found for the general shortening of the school term in the expectation that some students may find places of useful service.

11. In response to definite requests from government agencies, schools should be used from time to time for specific preparation of individuals for immediate service.

12. Boys and girls should be urged, as a patriotic duty, to remain in school to the completion of the high school course, and in increasing numbers to enter upon college and university courses, especially in technical and scientific lines, and normal school courses, to meet the great need for trained men and women.

#### APPROVED:

For the War Department, NEWTON D. BAKER, Secretary. For the Navy Department,

JOSEPHUS DANIELS, Secretary.

For the U. S. Civil Service Commission,
JOHN A. MCILHENNY, Chairman.

For the Department of the Interior.

Franklin K. Lang, Secretary.
P. P. Clanton, Commissioner of Education.

# The War and Women Workers

### By Florence Kelley

GENERAL SECRETARY THE NATIONAL CONSUMERS' LEAGUE

AMILY life is suffering from the war in diverse ways. Current vital statistics, where they are accessed and relatively trustworthy, are beginning to show sharp declines in marriages and births. Philanthropic appeals for more day nurseries suggest that mothers are leaving babies to strangers in order to meet the high cost of living by earning wages, and this in states which have instituted mothers' pensions in the hope of enabling mothers of little children to stay at home with them. While some states limit these pensions to widows whose husbands were citizens and had lived two years in the state, the baby farms and the day nurseries indicate that other mothers, besides the widows incligible for pensions, are leaving home to seek wages.

Girls who in happier years might have married now flock into new occupations. The latest innovation is sending girls who speak French and understand switchboard work to France in the service of the aviation corps. Very strangely no specification as to age is mentioned among the requirements for this service, though no nurse can get a passport for foreign service below the age of 24 years. Yet nurses who go have all had years of the strenuous discipline of hospital training schools. As preparation for American family life, switchboard service in France must certainly be viewed with misgiving.

Every day's fresh supply of newspaper clippings records

some new experiment of women and girls in occupations hitherto untried by them, and therefore devoid of standards such as have been slowly and laboriously built up in industries which women and girls long since made their own.

For nearly fifteen years past, sporadic attempts have been made by telegraph and messenger companies to substitute girls for boys. But until now public opinion has effectively discouraged these attempts. This year under the plea of labor shortage the attempts are widespread and brazen. Young girls in the characteristic caps of the messenger service are now seen regularly in the streets and office buildings of many cities.

This service is notoriously dangerous, and its attendant cvils have been branded by the legislatures of several states which have prohibited the employment in it of boys under 21 years of age between ten at night and five in the morning, and of all boys after 7 P. M. who are under 16 years of age. If women are to enter this service which is, in the nature of things, incapable of assuring the employes any personal supervision in the performance of their task, society must in sheer self defense prohibit work at night, at every age, and limit work by day to adults.

Women and girls have for several years been running passenger elevators in a few somewhat sheltered places such as

### Bills Pending in New York Affecting the Labor of Women and Children

#### I. To be Approved:

WAGNER BILL-Senate Intro. No. 93.

Creating a state minimum suege commission of three members appointed by the governor, with the consent of the senate, for three-year terms together with the Chairman of the State Industrial Commission nay of its own motion or upon petition investigate wages of women and minors in any occupation. If after investigation, it believes the wages to be below a living wage it may establish a wage board to consist of an equal another of representatives of employees and employers and one or more disinterested persons appointed by the story of the commission shall determine the living wage for such occupation.

#### II. To be Opposed:

#### 1. BROWN BILL-Senate Intro. No. 115.

Gives the Industrial Commission power to suspend in its discretion any or all provisions of the Labor Law relating to men, women and children. Bill in substantially the same form was passed by the last Legislature and was vetoed by Governor Whitman.

#### KLINGMAN BILL—Assembly Intro. No. 623.

Suspends all provisions in relation to the employment of children under the age of fourteen years or the hours of labor thereof in factories, mercantic establishments, street trades or any other employment coatained in the Labor Law, the Public Health Law, and the Education Law during the war and for six months thereafter.

#### III. Bills about to be introduced which should be Endorsed in Principle:

#### 1. PUBLIC MESSENGER SERVICE.

Employment of girls under 21 years prohibited. Women over 21 years to be employed or permitted to work not more than 6 days or 54 hours a week nor more than 9 hours a day, nor after 10 P. M. or before 6 A. M. of any day.

#### 2. STREET CAR SERVICE.

Employment of girls under 21 years prohibited. Women over 21 years to be employed or permitted to work not more than 6 days a week nor more than 10 hours a day, nor after 10 P. M. nor before 6 A. M. of any day. The hours of work must be consecutive except for the hour for meals.

#### 3. ELEVATOR SERVICE.

Employment of girls under 21 years prohibited.
Women over 21 years to be employed or permitted
to work not more than 6 days a week, nor 10 hours
a day, nor after 10 P. M. or before 6 A. M. of any day.
4. TENEMENT HOUSE MANUFACTURING.

Bill proposes to extend the present list of prohibited articles for tenement manufacturing, which now includes food, dolls or dolls' clothing and children's wearing apparel, by adding "toys" and "wearing apparel," and at the same time striking out the word "children's." The effect of this change would elimi-

nate finishing of all kinds of clothing in tenements.

5. SCHOOL ATTENDANCE OF MENTALLY AND PHYSICALLY SUBNORMAL CHILDREN.

Bill proposes to clarify existing law in order that such children may be required to attend upon special types of schooling so far as they are able.

#### 6. NEWSBOYS AND BOOTBLACKS.

Bill proposes to extend the present newsboy law to include boys working on the streets as bootblacks; to extend the license and badging plan to 16 years (instead of 12 to 14) and to provide for 8 P. M. closing hour for all such work.

#### REPEAL THE SUSPENSION OF COMPUL-SORY SCHOOL ATTENDANCE LAW FOR FARM WORK.

The bill proposes to repeal the Brown Farm Work Law of last year which gives power to the State Commissioner of Education to suspend the school attendance requirements for all children between April 1st and November 1st of each year during the period of the war.

women's lunch rooms, sanatoria and hospitals. This year they are at work in this capacity in considerable numbers in apartment houses. Where there is no responsible doorman, an elevator girl is exposed to frequent insult and occasional danger from men who are free to enter at all hours of the night. A recent careful inquiry revealed the fact that fear is a common accompaniment of this work. By running their cars up and stopping between two floors where they are inaccessible, girls can in the hours after midnight get some sleep on the floor of the car. In some apartment houses they rest on cots back of the elevators. But there they are altogether without protection from any passerby on the street who may enter. For sanitary arrangements the elevator girls are dependent upon the quarters of the janitor's family which are locked at night, or upon some public provision accessible to all tradesmen entering the premises.

The characteristic disadvantages of this occupation are exposure to insult and attack, the unregulated hours, which in many places are fourteen in twenty-four, and the wages which vary from place to place and were found to be generally low in relation to the long hours. As in the messenger service, there are no trade unions and there are no standards. In the interest both of the public and of the operators, no person below the age of 21 years should be permitted to run an elevator. For the public health and morals, adult women thus employed should have one day's rest in seven, no work between 10 P. M. and 7 A. M., and a maximum workday of tern hours.

Far more conspicuous than the work of women in all the occupations mentioned is their presence as conductors on surface cars and subway trains. Here it has already given rise to strikes, one of which they ingeniously brought to a sudden end by joining the union in a body. In New York city it appears that they were taken on for the purpose of forestalling a needed increase in wages for the men. The company, successful in this undertaking, proceeded to claim great credit for paying the women the same wages which they had been paying the men. In fact, however, they were not doing even this. For the men had, in view of long service, been getting varying amounts of bonus. The women as newcomers naturally received no bonus, though their hourly rate may have been the same. As they have no organization, the continuance of their alleged "equal pay" at its present rate is wholly within the decision of the corporations.

It was recently observed that on one surface railway, women conductors worked by night and men by day, and women had the "fush hour" turns and men the less trying hours of the day. Inquiry elicited the fact that employes of long standing were regularly given the choice of routes and hours while newcomers, in this case women, must take whatever was left. This seniority rule appears to be general throughout the occupation.

The life of surface railway conductors is never an enviable one. Long continued standing and strained attention to starting and stopping cars and collecting fares, especially in the "rush hours," make the work wearing for strong young men. The occasional presence of noxious passengers, commoner of course at night than by day, adds to the difficulty of the women conductors' task. For those who stand on the rear platform the weather of the past winter was unusually trying, and aggravated the permanent unpleasantness of a conductor's experience.

In all these employments women have been, in theory at least, setting men free for war work. It is, however, by no means proven that there are not abundant men (above the draft age and unfit for shipyard work) who could have filled all these posts.

Simultaneously with the nationwide "drive" to replace workmen with women and girls is a concentrated effort to destroy whatever standards exist for safeguarding the health, morals and intelligence of women, girls and children in industry.

Two extreme examples of this are the Brown and the Klingman bills pending in the New York legislature. Of the latter it has been truthfully said that "it authorizes a child to begin on the day it is hora to work twenty-four hours, and to continue to do so until it dies." The Brown bill is a hardy perennial. In 1917 it was vetoed by Governor Whitman after a continuous fire of onososition from the whole state.

#### The Most Important Bill of All

CORRESPONDINGLY vigorous and sustained effort is called for in behalf of measures to save and strengthen existing statutes and pass new ones. Most important in the whole important program is the Trammell-Keating minimum wage bill for women in the District of Columbia.

With its introduction in the Senate and House on March 1, Congress enters upon the enactment of an important war-time measure. For, while the number of working women in the District of Columbia is comparatively small, the passage of this bill will mean recognition by Congress that women in private employment, as well as men and women employed in the government service, must, in the interest of national health and efficiency, be paid a living wage.

Senator Park Trammell, formerly governor of Florida, was elected to the United States Senate in 1916 by a popular vote. He is a progressive southerner and an exponent of the new era in the South, as is shown by his close relations with labor. Representative Keating, of Colorado, made his record long since as the unflagging advocate of measures in the interest of wage-earners, especially of women and children. He it was who piloted to success in Congress the federal child labor bill now before the Supreme Court of the United States.

The Trammell-Keating minimum wage bill for women closely follows the provisions of the Oregon law, upheld as constitutional by the United States Supreme Court last April. It provides for a board of three members and subordinate boards for separate occupations which, after due inquiry into the cost of living, shall fix minimum wage rates for women

in the various trades and occupations. These boards are composed of representatives of employers, employes and the public, so as to ensure fair consideration of all problems which may arise in the fixing of rates for each branch of industry.

Twelve states have in the past six years established such minimum wage commissions and seven states have set wage rates. So well established is this minimum wage legislation in California and Washington, that rates have recently been raised by the state commissions in order to keep up with the increased cost of living.

The District of Columbia containing the capital of the nation must not lag behind the enlightened states in its labor policy and in its treatment of wage-earning grils and women, even if their number is comparatively small. Just as Congress, in 1913, gave the eight-hour day to working women of the district, to the benefit of both employers and employes, so it should now place the capital abreast of the best practice of the country in the matter of standardizing wages.

No one influence contributed so much to the passage of the eight hours bill for women as the facts presented by the federal Bureau of Labor Statistics. In support of the present bill also, the facts are at hand. A careful inquiry has been made by the same bureau into the cost of living of wage-earners in the district and the wages actually paid them. It has shown that women and girls employed in laundries, department stores, etc., are receiving wages too low to maintain a decent standard of living. Of the 600 women included in this study, 55 per cent were found to be entirely self-dependent, and more than 100 of these are themselves supporting other members of the family.

So convincing were these facts and figures provided by the Bureau of Labor Statistics that the government is now having similar inquiries made throughout the country as the basis for wage agreements for shippard workers.

The best testimony to the success of minimum wage legislation is that, where it has been longest on trial, in England and Australia, it has won the almost universal support of employers as well as of the workers. The old fears of increased cost of production and injury to national prosperity have long been disproved by experience. The minimum wage system has been found a genuine aid to sound industry.

In preparation for the District of Columbia minimum wage bill for women as well as for the earlier eight hours bill, the National Consumers' League and the Consumers' League of the District of Columbia first obtained legislation providing the necessary basis of facts. They are now jointly promoting the early passage of the Trammell-Kesting bill.

#### The State Minimum Wage Bill

SECOND in importance only to the congressional bill is the minimum wage bill introduced at Albany in successive years by Senator Robert F. Wagner, who derived both his abiding interest and the basis of facts for this measure from his service as chairman of the New York State Factory Investigating Commission in 1912-14.

In the intervening years spectacular wages paid to women in a few war industries have created a popular belief that there has been a general rise following the increased cost of living. In the old-established occupations of women and girls, however, no such soontaneous rise is observable.

Besides cooperating with the Consumers' League of New York City in behalf of this constructive measure, the national league is enlisting everywhere the cooperation of the appropriate organizations, and is calling for demonstrations to convince legislators of the need of meeting the present crisis by immediate legislative action. In its effort to put this program into practice in this difficult year, the Consumers' League is animated by these words spoken by its president, Newton D. Baker, secretary of war, at its annual banquet in Baltimore on November 14. 1917:

You have an opportunity to be explicit in teaching and impressing the lesson that we cannot afford when we are losing boys in France to lose children in the United States at the same time; that we canpot afford when this nation is having a drain upon the life of its young mushood, which is not learning the crafts by which the indeastial and agricultural life of the mains in hereafter to be sutained—we cannot afford to have the life of women workers of the United State depressed. If the Consumer's League and its affiliated and kindered organizations will stand on that and preach it constantly, in season and out of season, then truly while some of the direct losses of this war are irremediable, there will nevertheless be some by-products from it which will count for social gains among us. After the watage of the war has really dense to the different which further social advance on reconstruction can proceed.

### HOME SERVICE

# The WORK of the AMERICAN RED CROSS in the UNITED STATES

By W. Frank Persons

DIRECTOR GENERAL CIVILIAN RELIEF

THE RED CROSS HOME SERVICE INSTITUTE

HE barrier by which the German war machine was stopped in its wild career towards. Paris, was not alone the Battle of the Marne. It was even more truly the Belgian and French people's defense of their honor and their homes. Germany learned with rage and bitterness that one Belgian soldier defending his wife, his children and his fireside was more than a match for his merciless foes. It was not only the guns that backed up the allied trenches. Brave wives and hopeful families were present in spirit, as the first line of reserves. On every front, in fact, the war has grown into a titanic battle for the home. It will be won by the side whose homes are strongest, strongest in fact

and strongest in living ideals.

In our own case, the morale of our men in France will depend in a vital way on the welfare of those they leave behind them. They will soldier the better, the surer they are that everything is well at home. To be effective, the assurance of this welfare must be continuous both to the soldier and his family, and of its continuance they must have a definite guarantee. Nothing short of a national organization, enjoying short of a national organization, enjoying short of a national service in terms of neighborliness rather than of money, a service given quietly, generously, with sympathy, tact and comprehension, can supply this need now and when the war is over. This responsibility the Department of Civilian Relief of the American Red Cross has undertaken and it has given to the work the name Home Service.

The Red Cross has undertaken this work on a national scale at a time when the call from abroad for trained workers is insistent, and the need for trained workers at home is acute. That they must be trained workers is only too obvious. If the war has taught anything, it has taught the power of preparedness. Unskillful hands mean bungling, and bungling means loss of human lives or at the very least a sickening waste of material and resources. Home Service is directed primarily toward conserving the human resources of the nation in body and in soul. There must be no waste, no loss of these resources. It seems needless, therefore, to argue the necessity of special training for this service.

The pressing problem, consequently, is how to supply trained workers. These trained workers existed in limited numbers before the war. They existed in smaller numbers before our entrance, because by that time some of them had already gone abroad. Today we must secure a larger number than hitherto existed altogether, and secure them in the shortest possible time. To meet this urgent need for workers at home without at the same time drawing them from fields where they are vitally necessary, the Department of Civilian Relief decided in the summer of 1917 to establish, at strategic centers of the country. Home Service Institutes wherein additional workers could be trained, both for paid and for volunteer service. Unless this had been done, the Red Cross would have been at the embarrassing necessity of calling workers from their appointed tasks wherever they could be found. Such action would have been foreign to the spirit of the Department of Civilian Relief-a spirit of hearty cooperation with existing societies-and would have had the undesirable result of weakening the working forces of agencies, whose continued effectiveness is vital to the welfare of the country.

To organize the first institutes, the director-general of Civilian Relief appointed, as national directors of Home Service Institutes, Dr. Thomas J. Riley of the Brooklyn Bureau of Charities, and Porter R. Lee of the New York School of Philanthropy. Mr. Lee wrote the Syllabus of Instruction for Home Service Institutes which was published in September, 1917, as A. R. C. 205. Dr. Riley has been charged with the organization of the institutes. A conference of those appointed as directors of Home Service Institutes was held early in September, 1917, at which the Syllabus of Instruction was arrefully considered and the whole program of training discussed and unanimously adopted. The fine spirit of that conference at once assured the success of the enterprise.

Twenty-five institutes have been organized in towns and cities representing every section of the country. Wherever possible, they have been affiliated with a university, college, or training school for social work. They are open to executives and members of Home Service Sections of Red Cross Chapters, and to other qualified volunteers.

The first stipulation for an institute, indeed, is that there be adequate facilities for instruction and field work, and that the maximum membership be limited to twenty-five. In cities of the middle size, about fifteen students will be all the institute can accommodate satisfactorily. The general rule for membership is that it ought never be larger than the available facilities, and it should be limited to such a number as will permit adequate personal attention in classroom discussion and in the field work.

Secondly, the courses of the institutes require the full time of those who attend, for a period of six weeks. The programs of all the institutes are practically the same, such modifications as are made being for local reasons and affecting the form rather than the substance. The program is prescribed by the Red Cross and given under its auspices. The course includes four hours of lectures and discussion each week, with required readings, to which not a few local directors add Round Table conferences informally once a week. The remainder of the time—about twenty-five hours each week—is spent in supervised, practical field work in the Home Service of the Chapter in whose city the institute is held. Local societies that do case work gladly contribute opportunities for field work and help to supervise it, and the local Home Services Section supplies other opportunities for experience.

The program of lectures for the institute, as set forth in the syllabus, is designed to cover all the aspects of Home Service in a general way so that the theory may be well developed. The field work supplies the practical application, while the classroom discussions dispose of personal and individual problems, and serve to bring all the class to the same intelligent understanding of Home Service. Sixteen topics are embraced in the program, which is flexible and may be re-arranged at the discretion of the director of the institute. Specialists on some topics are frequently invited to lecture upon them. The director is of course personally responsible for the success of the institute.

The sixteen topics included in the syllabus occupy twentyfour lecture sessions. Five of these topics are especially emphasized, viz., The Fundamental Methods of Home Service, approximately five hours; and Health, Home Economics, The War and the Employment of Women and Children, and Re-Education and Readjustment of the Disabled, approximately two hours each. Notable among the other subjects are: Community Resources for Home Service, The Use of Other Agencies in Home Service, and The American Red Cross. Money Relief, as only one of sixteen topics, indicates by proportion that the main emphasis is on service as contrasted to pecuniary relief.

As an example of the development of a topic, this extract from the lecture on The Field of Home Service may prove interesting:

#### Part V .- The Task of Home Service

#### (A) THE HEART OF THE PROBLEM:

- Our obligation to the families of soldiers and sailors.
   Why the discharge of this obligation is called
- Home Service.

  3. Separation allowances do not discharge the
- Separation allowances do not discharge the obligation.
- These families are entitled to the fullest measure of helpfulness which our intelligence, sympathy and resources can afford.
- (B) Preparation for the task; Why training is necessary:
  - Importance of working systematically and under organization.
  - There are effective and ineffective ways of helping people.

- 3. How to serve without injuring sensibilities.
- 4. Service which is not interference or intrusion.
- (c) LOYALTY OF THE WORKER TO THE RED CROSS:
  - 1. Magnitude of the task of the Red Cross.
  - 2. Its dependence upon volunteers.

As may readily be observed from this example, the whole program is aimed at giving to the members of the institute, who have volunteered for the course or who have come as delegates from their chapters, a degree of training which will reveal to them the scope of their task and the variety of their problems.

It is the ideal of the Department of Civilian Relief that no worker shall be in charge of Home Service who has not had some previous, special training for the work. The more training a Home Service worker possesses, the better. It would be hard to have too much. In order, furthermore, that this training may be effective, there must be some definite standard beyond which preparation for Home Service can always go but below which it should never fall. This standard is fixed by the requirements for the Home Service institute course itself, and for the certificate to be granted upon completing that course.

It was hard, in the beginning, to bring home to some of the thousands of local chapters a realization of the universal need of Home Service and the equally wide need of thorough training. Local interests are sometimes obstacles to that national vision which the war has given to our country. Thus, the chairman of a certain chapter said to the director of the nearby institute, "Aren't you asking a great deal to expect anyone to come from here to a town in another state and stay for six weeks?" The institute director replied quietly: "We are asking young men to go to France to die." students went from that town to the institute and completed the course with credit. Twenty-five students, the full membership, graduated from that institute in its first session. Twelve are now giving full time volunteer service. Three are giving four full days, and six are giving three full days each week, as volunteers. Four are going into paid work. Sixteen of the twenty-five are now executive secretaries of Home Service sections. This is only typical of the first institutes.

Three hundred and sixty-five students from one hundred and ninety-five different towns attended the first sessions of the institutes. Three hundred and seven were graduated. There are now about eight hundred Home Service workers altogether, in different parts of the country, who have received or are receiving this training at the institutes and are ready to carry on Home Service for the chapters. The second sessions of the institutes have just opened. Others will be held this summer.

An understanding of the value of the institute training is daily growing, thanks to the efficiency and fine zeal of the directors and supervisors of the field work. All the institute members who have seen the vision of Home Service and realized the imperative need of training for the work that lies shead, are enthusiasts for the movement. They know now the value of training, and realize that they have only begun to learn what they should know to attain full success. They know what it means to be equipped not only with the fundamental methods for Home Service but also with the ability to present these methods to others. In this sense the institute is really an officers' training camp graduating students to become at once a source of service and of discipline. It is, after all, upon this very knowledge and this discipline that the success and the future of Home Service vitally depend.

#### WASHINGTON, BOLSHEVIKI AND I. W. W.

AST week the United States government encouraged and approved the sending of cable messages by pacifist and radical organizations in this country to the Bolshevik government, encouraging them to resist the invasion of Russia, with its immediate danger that the revolution and all that it stands for may be overthrown by German imperialism. Messages were sent not only by the American Federation of Labor and the Alliance for Labor and Democracy, but by anarchist, socialist and pacifist bodies.

Algernon Lee, in the name of the New York City Committee of the Socialist Party, cabled as follows: "The Socialists of Greater New York view the German invasion with deep indignation as to a blow to labor and democracy in all lands. We wish you success in revolutionary resistance—to Russian as well as German imperialism. Help transmit our appeal to German and Austro-Hungarian working classes to stop this outrage. We hold that on them now rests the greatest responsibility for success or failure of the world in the efforts for popele's peace."

Leonard Abbott, of the Ferrer Association, cabled: "Ferrer Association is with you to the death. Are forming Red Guard to help defend the revolution." The People's Council of America cabled and Crystal Eastman sent the following message for the Woman's Peace Party of New York: "Please express to the Bolshevik government our firm belief in their courage, wisdom and ultimate triumph, and our horror at the brutal demands of German autocracy. Be assured that we will use all our strength toward bringing about official recognition of the Bolshevik government by our own."

Two thousand volunteers to fight for Russia are said to have offered themselves at a meeting held in New York under the auspices of the Socialists' Propaganda League, where the chief speaker was Arturo Giovannitti, who is under indictment in connection with the government prosecution of the I. W. W.

In this sudden reaction, for the time at least bringing the radical pacifist and the government into harmony, it has been said that America is merely reverting to type. According to this view, America is herself a child of revolution and her history shows that she has always viewed with sympathy the efforts of a people to make themselves free. We have always had a welcome for a Kossuth or a Garibaldi; we have stood for self-determination in South America and Mexico against armed debt collectors; we went to war for the revolutionists of Cuba-we should be false to our history if we did not rise as a nation with even greater warmth for the cause of Russian freedom than we do against the extension of German imperialism.

Just four days before the government was giving its approval to these messages, Ralph M. Easley, of the National Civic Federation, considered the time opportune for some comment upon the "malodorous record" of "Bolshevism" and an attack upon its "crazy, mad and impossible program."

In a 5,000-word statement sent to the press, Mr. Easley expresses his opinion of William D. Haywood, the I. W. W. chief. Prof. Edward A. Ross, Charles M. Schwab, Roger W. Babson, William B. Thompson, the copper mine owner, and others whose views Mr. Easley finds to his inexpressible horror, to be the same. He was not surprised to learn that Haywood and Emma Goldman should advance such doctrines, but that "business men" should do the same he found "certainly astounding."

#### THE WAR AND THE FUTURE IN SPAIN

CLOUDS have been gathering over Spain for so many months, the bursting of the storm has been predicted so many times, that prophets may well hesitate to speak of the threatening outbreak of a revolutionary explosion. Nevertheless, the tension has become so trying that something must be expected to happen soon; and it may happen before these lines go to press.

Our own Food Administration, on January 22, announced that "the economic situation in Spain is regarded as one of the most serious problems that country has ever been called upon to face. Shortage of food and rising prices have aroused the press to a strong campaign against the government for not taking more vigorous efforts to control the situation, especially prices."

Personal letters from those in a position to know in Madrid, which have just reached this country (dated January), say that the country is on the eve of revolution. One of them says: "Things are in a very bad way. We live from one minute to the next in constant dread of what will happen. This has been the hardest winter you can imagine. Now we pay \$45 a ton for anthracite and coke. Life is most difficult for the working people, and they threaten a revolution because of hunger." Another writes: "Madrid is almost without coal. The electric plant shuts off the current from nine to six, so that we can use neither elevator nor front door bell. The street cars run twice as slowly as usually; and houses with dark rooms must return to the age of candles."

The most recent issue of the bulletin of the Madrid Institute of Social Reforms (for December) reports strikes of street car employes, road makers, agricultural workers, biscuit makers, metal toy makers, masons, bricklayers, weavers, carpenters, iron founders, tanners, painters, shoemakers and coal miners. In all cases except that of the miners the strike only involved small numbers; yet nearly all of them secured the higher wage demanded or redress of the greivance.

Food riots have spasmodically taken place in a number of places in recent months, more particularly in Barcelona and along the Mediterranean coast, where socialist organization is most advanced. Recent disturbances in Malaga and Alicante were put down with such severity that the people demanded the instant resignation of the civil governors. The pressure was so strong, and the outlook so ugly, that these two resignations actually did take place, and, after a wrangle in the cabinet, had to be accepted by the government.

Recent changes in the cabinet, to judge from such news as has come to hand, signify a struggle for supremacy between upholders of the old regime and an enlightened modern liberalism in domestic affairs rather than any new divergence of opinion on foreign policy. For the moment, resentment of German submarine attacks on Spanish ships on the one hand and suspicion of the allies on the other form only the background of a fierce combat between the upholders of suppressive and of democratic methods of laving the unrest of the people. Almost every day sees new scenes of disorder and new demonstrations of popular

The news from Spain is reported in the American press with such irregularity and absence of detail as to make it almost impossible to follow events. To outline briefly the political situation as it was a month or two ago, when preparations were made for the general elec-

tions which are now in progress, may help to better understanding.

First, King Alfonso is generally given credit for attempting to act on strictly constitutional grounds. His wife is English and his mother Austrian; personally he probably inclines more towards France and the English landed gentry, which he knows so well, than to Germany, but he does not show it.

There are two dynastic and three anti-dynastic parties. Among the former, the Conservative is now headed by Dato, while a small wing follows Maura. Dato was in power in August, 1914, and declared Spain neutral, following the accepted policy of his party, though in private he has been leaning towards the allies. Maura is very friendly to the allies.

The Liberal Party stands for universal suffrage, for trial by jury and other democratic measures. At the beginning of the war, it was under the leadership of Count Romanones, whose tendency to enter the war more or less openly caused a strong wing to separate itself under the leadership of the Marquis of Allucenus, the present prime minister, who has always stood for strict neutrality.

Of the anti-dynastic parties, one is the Tradicionalista, which is sometimes regarded as pro-German, but really is anti-ally for the purpose of counteracting the prevailing tendency which they fear might bring the country into the war. The leader is D. Jaime. The Republicans, or Reformista, headed by Melquiades Alvarez, are strongly for intervention on the allied side. It is sometimes guestioned, however, how far they would go if it were a matter of action rather than of words. The Socialists, of course, are pacifists. But their leader, Pablos Iglesias, has declared his sympathy for the cause of the allies.

The chief effort of the government, politically speaking, just now is to effect a combination of forces between the two dynastic parties in order to prevent a tremendous addition to the electoral strength of the anti-dynasts. The proally wing of the Liberal Party, under Romanones, is prepared to support Premier de Alhucemas. The leading Conservatives, however, are obdurate. Elections in Spain, in the past, have been fought with such wholesale bribery that it is difficult to foresee what the result will be this time when passions run so much higher and hundreds of thousands of people are hungry.

### MORE DISPENSARIES FOR MASSACHUSETTS?

Boston, or one-quarter of the entire population of the city, annually receive some medical care in thirtyodd dispensaries. In all the rest of the commonwealth of Massachusetts, with five times the population of Boston, only between 50,000 and 60,000 persons are treated at dispensaries. Yet Massachusetts includes many towns, and not a few large cities, with crowded industrial populations of the same type. and presenting the same needs, as those who frequent dispensaries in Boston. There are fewer physicians in proportion to the population outside of Boston than within it.

Should dispensaries, therefore, be extended in Massachusetts, or are there already too many in Boston and enough in the rest of the state? This is one of the questions raised by a study of dispensary clinics in Massachusetts, conducted at the request of the Massachusetts Social Insurance Commission, by Michael M. Davis, Jr., director of the Boston Dispensary, and just published as an appendix to the commission's report.

The question raised is partly answered by a study of the economic and social classes whence these dispensary patients are drawn. Out of 1,587 families, selected without bias from patients at the Boston Dispensary and the Out-Patient Department of the Massachusetts General Hospital, about 40 per cent were earning less than \$15 a week (as family income), 45 per cent between \$15 and \$20, and 15 per cent to 20 per cent

over \$20 a week. The majority of the families had three children or more. These families, socially and economically, are thus fairly representative not only of dispensary patients, but of wage-carners as a whole.

It is significant that only about 3 per cent of these families were in receipt of charitable aid. The great majority are self-supporting, yet they could not afford to meet the expenses of medical service during illness. This is partly accounted for by the fact that about half the patients of the leading dispensaries in Boston applied for kinds of treatment in which a specialist rather than a general practitioner is needed. and such service is, of course, more expensive than the care of a general practitioner. If wage-earners of these classes, not dependent on charity, found it necessary to receive dispensary treatment in Boston, the inference would be that elsewhere in Massachusetts, in other industrial and commercial communities, dispensaries were also needed. The Massachusetts Social Insurance Commission thought so, for in its majority report it recommended the extension of dispensary clinics, and introduced a bill into the legislature to provide financial assistance for dispensaries under certain conditions.

The report points out that the Boston figures are closely similar to those found by the Social Insurance Commission of California, in a report published early in 1917. The ranges of income among the patients and the small proportion who were dependent on charity, were strikingly like those found in Boston. The two studies, from the extremes of the continent, are alike in showing that a large number of self-supporting wageearners of small incomes, not otherwise dependent in any sense, are seeking medical assistance at dispensary clinics because they cannot otherwise purchase the care they need. In other words. "the great bulk of the families whose members are cared for by these dispensaries were able to meet the ordinary expenses of maintaining a family during health, but not meet the expenses of illness and pay the cost of medical service in addition.

It was found that sickness insurance among families of these dispensary patients was very infrequent, but that life insurance, according to the industrial plan of small weekly payments, was quite usual. A considerable proportion of dispensary patients were found to delay in getting medical treatment after the onset of disease. The report says:

Where diseases are such as cause much pain or discomfort in their early stages, such as minor surgical lesions, cuts, burns, etc., or irritations of the skin, treatment appears to be sought pretty promptly. On the other hand, with diseases which cause less trouble to the patient in the beginning.

but which are often likely to be more serious, treatment is more delayed. Thus 15 out of 29 patients with tuberculosis were conscious of illness over three months before the serious of the serious over three months before the serious of the serious over three months and the serious of the serious of the serious over the serious of \$5' with disorders of the circulatory systems over the serious over the serious over the serious over the serious of \$5' cases waited less than one month, while out of 55 cases waited less than one month, while out of \$5' cases waited over three months. The same contrast appears in "general surgery," between the non-operative and usually minor cases, which appears in "general surgery," between the non-operative and usually minor cases, which are generally more serious cases which are generally more serious.

#### HEALTH INSURANCE AN AID TO CONSERVATION

OPPONENTS of health insurance of the point out that provision for medical treatment, however complete, does nothing to prevent ill-health and to abolish its preventable causes. As often they are answered that the financial interest of all the insured persons in keeping down the outgoings from the insurance fund on sickness benefit will ensure a general and vigorous promotion of preventive effort.

The correctness of the latter view is demonstrated by the remarkable effect which the British insurance act of 1911 has had upon the study of disease and its causes and upon national and local action on sanitary and prophylactic lines. Although financed only to the extent of two cents per annum for every insured person, the Medical Research Committee of the National Health Insurance Joint Committee is able to look back in its third annual report, just is sued, upon a number of definite achievements in these directions.

By a lucky chance, the committee had been appointed just before the outbreak of the war; even so it had to fight the view that its work of research should be postsponed, "fill the war is over." As it happened, the war produced opportunities for medical research which exceeded all the expectations of usefulness which the committee could have formed when it was appointed. "The mere collection of men in large numbers under military rule has allowed observations to be made and recorded which have yielded information otherwise unprocu-

Thus, a study of kidney efficiency of 50,000 young men considered in good health and leading active lives at camp has produced new information upon a scale never obtained before or easily obtainable. The study of war wounds and war disease under service conditions necessitating the most efficient and economical use of apparatus has, in at least

one matter—the supply of oxygen—"revealed the wastefulness and inefficiency which for many years have marked our habitual hospital methods," and "the application here of physiological principles long ago established by English work but too little applied in England will now, we may believe, bring permanent benefit back from the trenches to the hospitals and sick-rooms at home."

Many other illustrations are given of the fertilization of both military and civilian practice by the mutual study of methods and results made possible by the research fund. The war changes in civilian life have provided, perhaps, even more basic opportunities for a medical research which in years to come will reform and re-invigorate both public health service and private practice.

"The stress of industrial work," says the committee, "has thrown into sharp relief our ignorance of its proper physiological regulation for the common good and has done much to stimulate a belated study of the natural laws of fatigue and of right living. The unfamiliar limitations in food supply have forced us to gain clearer knowledge of many biochemical and dietetic groups of facts long ago within easy reach though not artained."

### TUBERCULOSIS INCREASED IN WAR-TIME

DR. W. J. KERR, health officer of Newcastle-upon-Tyne, has published a summary of tuberculosis statis-His figures show that the number of deaths from pulmonary tuberculosis has increased both numerically and relatively since the outbreak of the war. The number of deaths in 1913 was 326; in 1916, 407; and for the first six months of 1917, 246 deaths were reported.

Dr. Kerr calls attention to the fact that all European nations concerned in the war, whether as active belligerents or those whose territory has suffered, show an alarming increase in deaths from tuberculosis in the civil population. He gives the first place among conditions leading to tuberculosis to poverty, followed by bad or insufficient housing, and third, overstrain. condition has, he believes, been remedied since the fact was realized that overwork of employes is unprofitable and that a six-day week yields better returns than a seven-day week. The influence of employment, he believes, is well reflected in the increase of number of deaths among girls between fifteen and twenty who have been stuffed into gaps in factories, shops, offices and even outof-door employment since able-bodied men went into the army. This change at a susceptible period of life cannot, Dr. Kerr believes, but leave its mark; and this mark he sees in the rise in deaths from consumption among young women.

Commenting on this report, the Boston Medical and Surgical Journal says;

This study emphasizes anew the intimate relation existing between economic conditions and pulmonary tuberculosis. They lead weight to the contention that the linital tend weight to the contention that the linital that the development of manifest disease in later life is due to other factors, largely economic, which operate by breaking down the resistance of the infected individual. A consideration of the facts here presented is cited to the content of the content of

#### DELINQUENT BOYS FROM BROKEN HOMES

THAT a disproportionate number of delinquent boys come from "broken" homes, and that mothers are at least as effective in cutbing delinquency in their male offspring as fathers and possibly more so, are conclusions drawn from a study of family disintegration and the delinquent boy published in the Javanal of Criminal Law and Criminalogy.

The study, made by Ernest H. Shideler, graduate student in the department of sociology, University of Chicago, covers 7,598 inmates of reformatories and industrial schools in the northern, eastern and western states. Previous studies had been made of this factor in delinquency, but none covering so many persons or so large an area. Mr. Shideler found that although only 25.3 per cent of all children in the country come from broken homes (i, e., homes in which the parents are not living together but are separated by death, divorce, desertion or some other cause). fully 50.7 per cent of delinquent boys come from broken homes. Since official records do not reveal the full facts in regard to the condition of the parents, Mr. Shideler is inclined to think that the true percentage may be nearer sixty than fifty. This means that approximately six out of every ten delinquent boys come from homes in which the parents are not living together. It doesn't mean that this is the only factor, or necessarily the chief factor, making for delinquency in these homes.

Analyzing his figures further, Mr. Shideler finds that while approximately one boy out of every twenty in the United States has lost his mother by death, one out of every eight in industrial schools has lost his mother. Thus, the odds against the boy without the influence of his mother are inferred to be tremendous. Moreover, fatherless boys in industrial schools are more numerous than motherless boys, the ratio being about three to two. Since, however, estimates place the ratio of fatherless to motherless boys in the general population as high as five to two it is

apparent that relatively fewer fatherless boys enter industrial schools than motherless boys. In other words, the withdrawing of the father's influence does not appear to have as great an effect upon the boy's social conduct as the withdrawing of the mother's influence.

The percentage of delinquents coming from crippled homes in strictly rural states, is conspicuously greater than that in urban states. This points, says Mr. Shideler, to "a multiplication of contributing factors in the urban districts."

# IS TEACHING A SWEATED

FACTS have recently been brought to light from two quarters indicating that poverty, or something close to it, is regarded as a spur to wisdom and efficiency in more than one branch of our educational service.

The federal Bureau of Education has compiled figures showing the salaries paid to county superintendents of schools, and also to city superintendents. County superintendents receive an average salary of \$1,375. Standards vary widely in the different states. New Jersey is at the top with an average of \$5,000. Wyoming at the bottom with an average of \$717. Twenty-eight states pay less than \$1,200. Figures are not given for the size of families.

In view of the growing movement for improvement of rural life and the part the school should play in this, it is interesting to compare the value placed upon the services of county superintendents with that placed upon their city brothers. The average salary of the city superintendent, city here meaning a place of 2,500 population or over, is \$2,260; the county superintendent gets of per cent of this. Montana shows the widest discrepancy between the two, while three states, New Jersey, Maryland and Pennsylvania, actually pay their county superintendents more than their city ones.

A recent bulletin of the Bureau of Education describes the competent county superintendent as follows:

"The county superintendent of schools should be a man or woman of training and experience in educational work. should be assisted by a competent corps of supervisors, and should have clerical assistance for his office work. He should be a man of affairs, of strong personality, capable not only of guiding and directing school matters, but of forming public sentiment in all things concerning the educational welfare of the community. In addition to being a trained educator, he should have a keen insight into the needs of country life and how the school can meet them. He needs such a knowledge of rural vocations as will enable him not only to teach and supervise vocational subjects, but to be

a leader among the farmers of the community, and one with whom they may consult on matters of general community welfare. He should be the one to select books and to compile a course of study that will adjust the school to the vocational and industrial life of the community."

Forty-three married instructors in the Department of Literature, Science and the Arts at the University of Michigan, caused a mild academic sensation last spring by presenting to the Board of Regents a typical yearly budget of what it costs a married instructor with family to live in Ann Arbor. The budget contained no items for books, magazines, professional dues, insurance or saving, nor did it take into account recent increases in prices, yet it revealed that twenty-seven of the forty-three were receiving from the university an amount insufficient to live on. If \$200 for increased prices had been added, the number of instructors below the line of self-support would have been thirty-five, and if expenditures for books, insurance, savings, etc., were included, only one of the forty-three would be found able to maintain a desirable standard of living.

The regents of the university granted the automatic increases to these instructors as a result of this memorial. It is rumored that many of the regents were profoundly impressed. Meanwhile, a new kind of collective bargaining seems to have shown itself—the bargaining of the academic proletarial.

# THE CALIFORNIA OF WEST AFRICA

NIGERIA is tired of the continu-ous stream of immigrants which menaces her racial purity and undermines her accustomed standard of life. The worm has turned. American missionaries in future will have to produce visible means of support and proof that they are not likely to become a public charge. No longer will the Children's Gift of Little Lambton's First Sabbath School be acceptable, for Brother Smith will not be allowed to enter his missionary field if he arrives with assisted passage or with a five-year contract in his pocket. Even when he comes unassisted and with no definite plan, he may not enter upon educational or missionary work without the written permission of the government.

Under the new immigration ordinance of November 8, 1917, our reverend brother will further have to produce \$146, with one or more sureties to be approved by the immigration officer; and if he will not live in keeping with the local standards he may be turned out again within six months, and his deposit may be forfeited. Besides being dealt with as a prohibited immigrant, the American missionary who attempts to practice his willy arts with

out government permission will further be liable to a fine of \$243 or six months' imprisonment.

Perhaps it is a lack of farm labor which, as in other countries that need not be named, has led to a deviation from these restrictions in the case of temporary visits for which transit passes may be issued if the applicant can give a good account of himself before an immigration officer. Admission for a temporary sojourn, however, makes necessary a deposit of \$146 for the applicant and a like sum for each person, wife, children or others, accompanying him.

## MONEY POURED OUT FOR JEWISH RELIEF

JACOB BILLIKOPF, of Kansas City, when called to New York to manage the drive for a ten-million-dollar fund for Jewish relief work abroad and for Jewish work among soldiers, insisted that this effort, if carried through in the proper spirit, would not hinder but help the financing of Jewish institutions and charities at forme.

Close upon the phenomenal success of that campaign, with its magnificent over-subscription, Jewish leaders in New York decided to start immediately upon a drive for increased membership of the Federation for the Support of lewish Philanthropies in New York city. By utilizing the enthusiasm engendered in the earlier campaign and with an army of 3,100 workers, the mark set for the new one was also overshot, and in two weeks 50.821 instead of the 50.000 new members aimed for were added to the roll. This is exclusive of 10,500 new members pledged by the president of a large lewish fraternal order, in itself an increment to the membership which would place it upon a most democratic basis.

In spite of the tremendous call of the war upon the generosity of American Jewry, the income of Jewish philanthropies in New York city has steadily increased. It was \$1,550,000 in 1915, \$1,600,000 in 1916 and \$2,100,000 in 1917.

#### TEAM WORK FOR CAMP DEVENS BOYS

WHEN a committee of the Women's Patriotic League recently discovered that about twenty-five different social agencies were engaged in an effort to keep conditions in the region of Camp Devens wholesome and safe, it was apparent that some cooperative organization was necessary. Camp Devens is located at Ayer, Mass, a town of about 10,000, but there are some 30,000 soldiers at the camp. The surroundings are entirely rural, but with cities of considerable size not far away and Boston at an hour's ride.

A movement was started to form a

zone council, supervising a considerable area around the camp. Then it was found that the Camp Recreation Organization was already having conferences of various agencies, so that the zone council project was suspended, with a view to cooperating with the recreation workers instead. As a result of several meetings, a monthly conference is to be held, to which each agency will bring report of its work and its observations.

A continuing survey of the various activities, discussion of the direction which each shall take and a thorough coordination will be undertaken. Elizabeth F. Maloney has been placed in the field by the State Board of Charity and has been assigned by the conference to the task of referring to the appropriate agency any cases which may come under observation, to insure their efficient handling. The cooperating bodies in the conference include not only social agencies, but also military officers of the camp, police officers of the towns, particularly those of Ayer; the state police, who are represented by officers detailed to this field, and the local courts, represented by their probation officers.

**Book Reviews** 

PRESENT-DAY EUROPE
By T. Lothrop Stoddard. Century Co.
322 pages. Price \$2; by mail of the Survey \$2.15.

This work is entirely first rate. In one sense it is already out of date-it was written before the Russian revolution-but it is nevertheless one of the few war books that will always be of the greatest value. Indeed, for the future student of this day, who does not plan an extensive personal research through the files of the leading periodicals of Europe, the vivid little work before us will be an almost indispensable source book. For in trying to give us the general point of view toward the war of every nation of Europe, whether in it or out (though Switzerland is unaccountably omitted), the author supports his judgment by quoting freely from the speeches of leading men and the editorials of prominent journals. He seems to be in sympathy with each people in turn; at least he is most scrupulously fair. In such an atmosphere as surrounds us today his impartiality has a most unfamiliar ring.

It cannot be said that one rises from a perusal of these absorbingly interesting pages with an optimistic view of the future. He holds out no hope whatever of a United States of Europe, or a speedy federation of the world. Like many others, he is simply filled with dismay as he contemplates the ruin of one of the fairest regions of the earth, but he pointedly declines to prophesy.

It is sad reading enough. Belligerent abuse has not much more dignity than Luther's description of Henry VIII as a "damnable and rotten worm," and one wonders how civilized life is ever to be restored at all. It certainly seems as though the first ten years of reconstruction may make at least as much difference to the future grading of the nations as anything in the treaty of peace. This work should be carefully read by every serious student of the war.

IAN C. HANNAH.

THE LITTLE GRANDMOTHER OF THE RUSSIAN REVOLUTION, REMINISCENCES AND LETTERS OF CATHARINE BRESHEOVSKY. By Alice Stone Blackwell. Little, Brown & Co., 348 pp. Price \$2; by mail of the Survey \$2.15.

Madame Breshkovsky has made it possible for many people in America to understand Russia-the Russia of the revolutionists. So inspiring is her personality that it is hardly possible for one who has felt the direct influence of contact with her to discuss the book objectively. It is fortunate at this time, when a fuller knowledge of the complex Russian character is necessary for any understanding of the present turmoil in that country, to have a book so illuminating as the letters and reminiscences of Catharine Breshkovsky, Alice Stone Blackwell has contributed enormously to this understanding by the timely publi-cation of the book. Very wise has Miss Blackwell been in letting the letters speak for themselves, prefacing them with a brief biographical sketch. It is not only a record of a strong and beautiful soul, of a selfless devotion to a noble idea, but Madame Breshkovsky reveals herself in the book, a personification of the Russian revolutionary movement-a movement that has been kept alive through many years by this great woman.

Catharine Breshkovsky was well born, as the world calls it, her father the son of a Polish aristocrat and her mother the daughter of a noble family of Great Russia, but they were wonderful to Catharine Breshkovsky in another way, for she says, "If there is anything good in me I owe it all to them." They were, however, of the old regime and the child.

Catharine, seems to have been very early impressed with the contradiction between precent and practice, so far as the serfs were concerned, although her father, a kindly and just man, according to his lights, treated them with much more consideration than most Russian landowners. He did not permit them to be flogged, and the serfs felt the difference and boasted of it. But even here there was no genuine concern for their welfare, save on the part of this sensitive child who escaped from her own luxurious home to visit them in their miserable huts, and, having heard of California and the gold there, dreamed of going to that distant land and returning with a fortune with which to make a paradise for these unhappy people,

She was sixteen when the serfs were emancipated, only to be plunged into deeper misery by the loss of their tiny plots of land. She had even then a little school for peasants on her father's estate. When she was nineteen she went to Petrograd and joined the central group of Liberals, gratifying her desire for independence by becoming a governess in a nobleman's household. When her father finally insisted that she should return home he promised that she should be independent and live on her own earnings; he helped her to establish a boarding-school for girls and built her a cottage where she could teach the peasant children. All that she earned above her livelihood she devoted to helping the peasants. At the age of twenty-five she married a young noble, who sympathized with her aims and aided her in her work. She felt, however, the need of more radical action. the futility of mere palliative measures, and this conviction of the necessity for change in the existing form of government became strong enough to enable her to face the prospect of imprisonment. torture, exile and death. Her husband was young, with his life before him. She felt it was only fair to state her position frankly, and as he was not willing to take the risks of extreme measures. she started out on her undertaking alone. Their infant son she left with her brother and his wife to bring up as their own, for she knew she "could not be a mother and still a revolutionist." "I was not the only one called upon to make such a sacrifice. Among the women in the struggle for Russian freedom there were many who chose to be fighters for justice rather than mothers of the victims of tyranny."

From that time on her history is well known. Arrested after three months of propaganda work among the peasants, she was held in prison for a long time and finally sent to the mines at Kara. When her five years at the mines was completed she was sent to Selenginsk, a small Buriat hamlet on the frontier of China. It was here that George Ken-

Indixed by Goode

nan saw her and in his Siberia and the Exile System he records the strong impression that she made upon him and her heroic parting words; "Mr. Kennan, we may die in exile, and our children may die in exile and our children's children may die in exile, but something will come of it at last."

In 1896, her term completed, she returned to Russia and after visits to her relatives began again the dangerous work; after many narrow escapes from arrest she came to the United States in 1904 to enlist help for the cause. Here she was enthusiastically received by her fellow-revolutionists and other sympathizers, and it was during this visit that her unquenchable spirit won her the friends to whom the letters are addressed. Many of them were written in French, some in the quaint and colorful medium which she calls her "bad" English, all livened by a humor which never deserts her.

She returned to Russia and in 1908 was re-arrested and sentenced at the age of sixty-eight years to Siberia for life. She was sent to Kirensk, a little town on an island in the Lena river, but after her unsuccessful attempt to escape in 1913 she was sent to the central prison at Irkutsk and then banished to the far north, whence she returned in triumph to Russia at the invitation of the provisional government in the spring of last

year.

Americans who have been in Russia since the revolution and who have firsthand knowledge of the situation, report Catharine Breshkovsky the wise leader, the inspiring director, though she is debarred from active participation while the Bolsheviki are in control. Wisdom and sincerity on her part and those of her colleagues who are working with her will, they believe, lead Russia into an organized and stable government. The readers of the book will, I think, get a clue to the qualities in "Babuschka" that have made her life important to Russia and to all those who love democracy. LILLIAN D. WALD.

ANNUAL CUMULATED BULLETIN OF PUBLIC AFFAIRS INFORMATION SERVICE. Edited by Lillian Henley. 494 pp. H. W. Wilson Company. Price on application to

the Stravey

From abattoirs to zoological gardens, there is hardly a subject of interest to the student of public affairs which, if it received any public discussion at all between October, 1916 and October, 1917, is not listed and made accessible by precise reference. This service, now in its fourth year, may not be perfect-it would be easy to point out omissionsbut so far as it goes it provides a want not otherwise filled.

To judge from the letters of inquiry which reach every editorial desk, a source book such as this should be kept in every public library; its constant use

by librarians and by persons who know how to utilize a bibliography would make unnecessary a great deal of correspondence. For the public administrator, a volume such as this makes it safe to throw away a great deal of elusive material, such as pamphlets and reports, which he now files away in view of some possible future use, because it enables him at any time to procure just the references which he requires. Of special value in this connection is the listing of state laws.

PROBLEMS OF SUBNORMALITY

By J. E. Wallace Wallin. World Book Co. 487 pp. Price \$3; by mail of the SURVEY \$5.25.

This book does not merit careful reading owing both to the nature of its contents and to the acrimonious temperament of the author. It does not offer a real contribution to the subject which K. S. L. it professes to discuss.

SOLDIER'S BOOK OF WORSHIP

By Albert Hallett. Abingdon Press. 163 pp. Price \$.25; by mail of the Survey \$.28.

Several pocket volumes of devotion for soldiers' and sailors' use have appeared, bound in appropriate olive-drab or khaki. The latest, from the Abingdon Press, contains passages from the New Testament and a number of prayers and familiar hymns. prayers were written by Albion Fellows Bacon, whose articles, Beauty for Ashes, appeared in the Survey during 1914.

INCOME TAX LAW AND ACCOUNTING

By Godfrey N. Nelson. The Macmillan Company. 364 pp. Price \$2.50; by mail of the SURVEY \$2.62.

The extension of the time for filing income tax returns to April 1 and the excellent manuals published by the internal revenue commissioner himself and by a number of banks should enable every individual income taxpayer to obey the law without incurring nervous prostration. There are, however, complicated circumstances requiring more ample information such as in these days of stress and innovations it is difficult to get out of harassed officials. Here Mr. Nelson's careful and practical exposition, first published in application to the income tax act of 1916 and, in this new edition, taking in the war income tax and the war excess profits tax laws of October, 1917, will prove most

Some of our readers will be especially interested in the chapter on exempt organizations which gives in detail the classes of institutions which need not pay income tax-other than what is withheld at the source-and in the explanations given of the law's provision concerning charitable contributions. This term, by the way, the act permits one to apply to so great a variety of purposes that no particular class of institutions or individuals need fear to be singled out by its critics as enjoying a special privilege.

Another point of interest is that for purposes of taxation, bonus and profitsharing payments are treated exactly like wages; this will have the psychological effect of making it impossible for employers at any time to withdraw so-called war-time bonuses without admitting that they are reducing wages.

B. L.

PATRIOTISM

By Sir Charles Waldstein. Longmans, Green & Co. 155 pp. Price \$1; by mail of the SURVEY \$1.10.

The author of "Aristodemocracy" returns in this latest work to his plea for a "patriotic internationalism." He wishes to rescue the term international from the monopoly of the Marxians on the ground that the division or union of mankind on the basis of economic class is misleading. In the same way he desires to cleanse the term patriotic of the familiar jingoistic blemishes illustrated in their extreme by Germany. remedy is twofold, a league of democratic nations to enforce peace and an "aristodemocratic" education.

"True democracy," he holds, is the solution of the difficulty raised by the extremes of liberty and authority. best of liberty is the "liberty to choose the best authority-itself not fixed, but moving and progressive, with life." To promote this ideal the writer advocates a system of national education accompanied by a graded suffrage. Just as children, criminals and lunatics are now excluded from the vote, so would all be shut out who are unable to pass certain examinations in civics and ethics at the close of their elementary schooling. Successful examinations in advanced civics and ethics would entitle the citizen to an additional vote; and still further votes would be granted upon the same principle. Sir Charles is evidently impressed by Germany's success in putting a premium upon intellectual attainment by reducing military service to one year for the young man who passes various examinations The general plan offers much that is

worth considering. The old charge that democracies level downward, we are learning at last in our own country, need not always be true. And lest we think of "education" as something essentially wooden, the author reminds us that "the final aim of all education is to make ideals realities, the moving force to thought and action. After all man is religious in the degree in which ultimate ideals are real to him."

The difficulties in the way of introducing a selective franchise are obvious enough. Who, for example, can persuade a majority of "average" citizens, bred upon the doctrine of equality, to endow intellectual superiority with additional votes? To be sure, in these revolutionary days, it will no longer do to dispose of a new idea at the outset by citing difficulties. More to the point is the question whether the scheme does not put too great a task upon the state. We venture to believe that since the state can sometimes be captured by special interests, students will rather wish to search for better methods of improving the common life than state-prescribed tests for additional votes.

HENRY NEUMANN.

THE RURAL TEACHER AND HE WORK
By Harold Waldstein Foght. Macmillan
Co. 359 pp. Price \$1.40; by mail of the
SURVEY \$1.52.

There used to be a professor in an eastern college whose knowledge of history was encyclopedic. "If you tap him anywhere, he runs," his students were accustomed to say. Prof. Harold W. Foght has the breadth of mind and the universal information which no other man possesses in reference to the country school. This book is his latest contribution to the subject. Every worker on country schools can find here what he wants. Everything from the pioneering type of education to the latest proposals under the Smith-Hughes vocational education act is in evidence, just as in actual experience the responsible workers must meet them all in almost every county.

Professor Foght is constantly traveling as a representative of the United States Bureau of Education, not only throughout all the states, but frequently abroad. He is the one writer who brings American shools into contemporaries. Best of all Americans, he knows Denmark. This universal character of his work gives the book, which is written out of his own heart and mind, its great

The textbook form in which the book appears, with reviews, current literature listed, questions and problems at the end of each chapter and abundant references, makes it valuable for school use. There are good chapters on preparing the teachers for rural leadership, administration, supervision, the one-teacher school, the coming of the real community school. rural high schools, rural continuation schools. It might be said that it is the latest epistle on the educational revolution, for Professor Foght is a drastic revolutionist in education. He would revise the curriculum at once and radically upon a basis of "useful purpose." original contribution of the book is in the chapters on The Teacher as Maker of the Revitalized Course of Study. We have long awaited this contribution by Professor Foght, who has addressed himself for some years to the subject of the curriculum. It cannot be said that he has conclusively solved it. No man can do that for years to come. But the contribution he makes to the work of the experimental teacher, the Moses of our present Egyptian slavery, is very valuable.

The most interesting chapter to the reader perhaps is the comparison made between the township and county systems of administration. Professor Foght is, of course, an advocate of the

county system, as are the other men of the Bureau of Education. The bitter fight in New York State for the "new township law" makes this chapter of big value, for this law was passed after Professor Foght's manuscript was written. It may be repealed before this comment is printed; nevertheless the school people of New York will find the chapter on Rural School Organization and Administration most illuminating. WARREN H. WILSON.

#### SEVEN-CENT MILK

TO THE EDITOR: The high cost of milk is a problem everywhere. The women's residence of the South End House, at 43 East Canton street, Boston, has arranged with a milk dealer to supply skim milk, in quart bottles, at seven cents a quart. The settlement sells it at this price to all the neighbors who wish to buy.

At the baby clinic, milk soups, milk puddings, etc., are on exhibition, and the mothers are allowed to sample them, and to take away the recipes. A large circle of customers for the skim milk has grown up, and the children of the neighborhood reap the benefit.

ALICE STONE BLACKWELL.
Dorchester, Mass.

# MR. BABSON ON SOCIALISM

TO THE EDITOR: In the course of an address on The Hope of the Consumer before the Calvary Forum of this city, Mr. Roger W. Babson, whose popularity as an expert commercial and financial statistican extends to a wide range, characterized socialism as "getting something for nothing." To those who are at all versed on social and economic reform such an assertion must appear as the most absurd and illogical one that has ever come from a public platform.

It was hoped that in the course of the questionnaire Mr. Babson's statement would be challenged, but owing to the numerous questions asked it was next to impossible to reach him, and the columns of the SURVEY are hereby appealed to, to assist in stemming the tide of such sophistry.

George M. Mock. Buffalo, N. Y.

[Mr. Babson furnishes us the following verbatim report of that portion of his Buffalo address to which Mr. Mock refers.—EDITOR.]

Socialism as a religion I believe in. At times it appears to me as almost synonymous with Christianity. Socialism in many forms has already been adopted. The highways, the fire department and even our public school system are forms of socialism. The reason that the fire department is successful, however, is because the people really believe that it is for their own selfish interest to have a fire department. Everyone knows that when the other fellow's house catches fire it is very apt to set their house afire also. If, however, it would be possible for one house to burn, without any danger to other houses, there would be no fire department. The success of the highways, public schools and all other socialist functions which are successful can be explained on the same basis,

Only as we really believe in the Golden Rule and appreciate the fact that when others suffer we ultimately suffer also, can socialism be adopted successfully. The real fact is that only about 5 per cent of us people believe in the Golden Rule and are willing to work in accordance with it. About 95 per cent of the people actually believe today that others can suffer without hurting them and that others can prosper without benefiting them. The great majority of people are yet intrinsically selfish. Hence if socialism were to be adopted today, it would result in chaos, in this country, the same as it has resulted in Russia, Moreover, I say this both as a friend of Russia and of so-

There are a great many intelligent and unselfish Socialists. I admire the work which they are doing, and the more of such prople that there are, the better our country will be. A very large number of people, however, are preaching socialism today as a scheme for getting something for nothing. A great many socialists unconsciously have for their motto, "Let George do it," and they are the very hardest people to cooperate with along constructive lines. Their preaching is Utopian, but at heart they

WANTED-Position as Superintendent or matron. Experienced in Training School, Girls Boarding Home, and Orphanage. Good manager, economical buyer. Best references. Address 2727 Survey.

WANTED-Position as assistant matron in convalescent home or child-caring institution. Address 2731 Survey.

EXPERIENCED and trained teacher of therapeutic occupations seeks position with hospital or sanitarium. Address 2732 SURVEY.

SOCIAL worker and arts and crafts teacher with broad experience and thor-ough training in educational social and art lines seeks position. Address 2733 SURVEY.

EXECUTIVE-Jewish young man, University and Philanthropy school graduate, experienced in relief, research and Americanization work, seeks position as head of shilanthronic organization. We'll amilified philanthropic organization. We'll amilified and highly recommended. Ready May 15. Address 2734 SURVEY.

MAN-UNIVERSITY and School of Philanthropy training, extensive experience, desires position. Address 2735 Survey.

Manager of Industrial Relations Wanted an executive position with a firm employing a large number of women and girls, to handle labor, accident precautions, and welfare work. Address 2729 Survey.

MAN, Jewish, School of Philanthropy graduate, experienced in relief, employment and settlement work, executive ability, de-sires position. Address 2736 Survey.

New Slides on Alcohol. Attractive, instructive, convincing. "Why Sobriety for the Soldier:" "Drink and Industry." Dept. C Scientific Temperance Federation, 36 Bromfield Street, Boston.

are vet selfish. Socialism is no philosopher's stone and cannot be trusted as a form of perpetual motion. Hence the consumer's only hope lies not in legislation, labor unions, socialism, or any other quack remedy. The consumer's only hope is in increasing production and eliminating waste.

## COL. AZAN MAKES DENIAL

TO THE EDITOR: Will you allow me to say a few words about the article in the SURVEY Sissue of December 8. 1917, page 2941 and in the Review of Reviews, apropos of the anti-alcohol question, a matter in which I have never pretended to be expert.

1. It is inconceivable to attribute to a French officer the declaration that he has seen his men drunken; every fairminded person knows that there is no need to worry about drunkenness in the French army, because it does not exist,

2. I have never been interested in the percentage of alcohol in wine, being entirely ignorant of this question. My opinion is only that of every one else namely, that the consumption of several bottles of wine can intoxicate a man.

3. The ration of rum before the attack has the advantage of giving "elan," but the French have no need of it to go "over the top," because they are naturally brave.

LT.-COLONEL PAUL AZAN. Boston,

#### SHALL WE JUNK OUR TOWNS?

To THE EDITOR: Our town possesses two or three industries well adapted to times of peace, but the demand for their product is now falling off and the employes are moving away to get employment in places that are filling up with war industries.

Our town has built up good homes for its people, its drainage and water system has been made modern and adequate, it has a good hospital and nursing system, well-built churches and school buildings, and recreation centers. town, in fact, is a well-organized plant to give suitable living facilities in connection with its industries.

In most communities the plant that furnishes living facilities is much larger than the factory itself, it takes longer to construct and it costs much more to junk it and start anew.

The question that interests some of us is the coming policy of our country with regard to such plants in the face of

# NATIONAL SOCIAL WORKERS' EXCHANGE

FOR EMPLOYERS

FOR EMPLOYES

Scientific selection of candidates for organizations desiring trained social workers. For the constraint of the constitute of a constitute of acid w

MRS. EDITH SHATTO KING, Manager, 130 East 22d Street, New York

the war. Apparently we must more and more change our industries into parts of one main industry of supplying the war. In order to do this some of our workmen must be transferred from one place to another, as, for instance, in the case of shipbuilding, where the site is largely determined by suitable access to tidewater. In that case new towns must be built and organized, as is already being done

With many other industries, however, there will be a choice to make. Shall we change over the industries of old towns for war work and keep the living plant substantially intact, or shall we add new factories and new housing at points where war work is already started and junk our old towns with all that we

have been building up in the last years? This seems wasteful in more ways than one. Is the question to be worked out on its merits, or are we merely drifting?

#### DIVIDED WE FALL

TO THE EDITOR: The question of increased postal rates on second-class mail matter is too big to admit of special consideration for any one section of the country. The magazines and newspapers of this country are public property. The public should see to it that its property is not so taxed that it will have either to mortgage it or give it up altgether. Here we have a proposed law which will cut into two of the most vital factors of our life today: first, national education; second, national unity.

There has been an increase in the cost of paper, of ink, of labor. There are plenty of figures on this subject. Now let us add an increase in postage rates of from 50 to 900 per cent. Obviously the majority of the magazines cannot meet this increase. Perhaps, less ob-viously, the newspapers can. The majority of newspapers are sectional. A few of them have a wide circulation throughout the country. And among those few, some are not rich. For these there must be a financial problem in the proposed increase of rates according to the zone system.

Then it remains for the public to assume the cost. "Passing on" the cost to the public is a favorite slogan these days. How much of this passed-on cost of living the American public can carry becomes a problem. Even Atlas must have had his maximum weight in worlds!

Let us say that this increase will wipe out the profits of the magazines and of some of the newspapers. Let us assume that at this time of crisis, with its tragic losses, the magazines and newspapers of the country should lose all or much of their profit, and that it does not matter whether they do or do not go to the wall. Let us with sublime indifference to civilization-the equivalent of

German brutality, although more subtle - dismiss all consideration for the plumber, the baker and the candlestickmaker. Let us take away from them their trade and technical journals and refuse to consider the convenience of the public they serve. Let us say that it does not matter that hundreds of thousands of men and women employed by the great network of publication should be thrown out of employment, since their labor is so sorely needed elsewhere. Let us say, on the basis of the

same argument, that it does not matter that the majority of authors and journalists should lose their sources of earning a living, for war demands its sacrifices. Let us say that it does not matter whether certain members of Congress criticized in these newspapers and magazines repay old grudges or not.

Of course-it is so evident that it seems foolish to make this statement!we can all move to New York. Once there we shall not have to pay twice as much for our magazines as in California

SECOND PAN-AMERICAN CONGRESS

# Child Welfare

MONTEVIDEO, URUGUAY December, 1918

Societies, libraries, churches, workers and all interested in child welfare are urged to become members of this Congress and thereby strengthen our relations with Latin America. Julia C. Laltrop, Chairman United States Committee. Send membership fee of five dollars to Edward N. Clopper, Secretary, 105 East 22nd St., New York City. This includes Proceedings.

or elsewhere. A two-dollar-and-a-half magazine will cost us two dollars and a half and not five dollars, as it would in Oregon. The New York zone reaches 300 miles inland and 300 miles out to sea. That 300 miles of sea would soon become as crowded as a Chinese waterfront. Perhaps this is what the Gentleman from California. who evolved this marvelous "rider," wishes. He is only human; he may have a few friends he would like to see established. Or it may be that the Gentleman from California desires to keep the eastern paper and magazine from traveling westward, so that he can develop his own organ satisfactorily.

But there are two things which do matter. The first of these is that the public should lose any of its utilities in the way of public education. Now is the time when our education needs more protection rather than less. That our education does need this protection becomes only the more evident as our city councils (not our boards of education!) close the public schools on account of coal shortage and allow the colleges to close or face closing while they permit the saloons, breweries and theaters to "keep open." Even as the value of childhood increases, so does the value of education go up as man-power, manmade beauty, and man-developed education are being wiped out in this European holocaust.

Educationally, the proposed action would cut off many of the magazines and some of the newspapers from our boys at the front. They would lose touch with home at a moment when that touch is most vital to them.

Such action would mean that the better class magazines used, especially in the West and Middle-est, as textbooks in the English literature courses of many of our schools and colleges, as, for example, the Survey, Atlantic Monthly, World's Work, Literary Digest, Independent, Collier's, Metropolitan, North American Review, Bellman, Chicago Pactry, and others would have to go. This would mean a depreciated school or classroom; at the least, an increased vacuum, for if nature abhors a vacuum the college classroom is the exception to that rule. Aside from school and college, many of the people who would be cut off first from the publication because of the added expenses would be the very ones who need most the educational and perhaps the Americanizing influence of the newspapers and magaziness.

Such action would mean a decrease in domestic education, the loss of magazines to millions of mothers who through them have learned how to care for their children, how to save the lives of babies. how to make the home and the town healthful and attractive, and how to conserve food and fuel. Loss of the Delineator, Pictorial Review, Woman's Home Companion, Woman's World, Ladies' Home Journal, to name simply a few, would mean inevitably the loss of thousands and hundreds of thousands of babies. A country-bred woman, speaking of this possible loss of the household magazine, writes: "Twenty years ago the infant mortality among us was an agony. A baby born was re-ceived with both love and terror, for we saw how few were his chances for surviving his first three years. Today the love is there, but the terror is gone. We have been taught how to guard our babies, not only to guard them after they are in our arms but before. For this one thing the magazines are precious to us."

Such action would mean that the farm journals would have to go. These farm journals ring to the farmer all of the latest scientific information about the planting of crops, their care, the raising of poultry and other live stock. Now, of course, is just the right time to see that our vegetables, bushes and trees receive a large increase in scabs and blights, and that the amount of food produced should be lessened! Pro-Germanism this of the efficient variety!

The proposed action would hamper the newspapers, which are the greatest power in this country in the construction of an adequate public opinion and in the development of a national life which we can all share in common. It would mean depriving some households of such newspapers as the Springfield Republican, Boston Transcript, New York Sun, the New York Evening Post, New York Tribune, New York Timer, Chicago Herald, Washington Star, St. Louis Globe-Democrat, Kansas City Star and a score of other excellent newspapers which are as yeast to the thought-life of our country.

Finally, there is the question of the creation of public opinion. Now of all times is the hour when national unity is of greatest importance to us. The

government could not go to work more efficiently to break down this national unity than by depriving the public of its newspapers and its magazines, and making it inevitable that public opinion should receive its future growth sectionally rather than nationally. What is this new Mason and Dixton line which the Gentleman from California is trying to set up? A line which will divide this country nationally and in every other way. Greatly to the advantage of the Germans, we would soon become as a house divided against itself.

The American public has been meeting a great crisis in the best possible spirit of generosity and patience-and patience is indeed a new exercise for the average American. It would seem, as one thinks about this extra "rider," that some actual malice, if not worse, were at work in this proposed tax on national unity and on free education. Assuredly, anything which creates sectional divisions and differences at this hour is pro-German, gives comfort to the enemy. and assures them success. It has become a matter of international importance that we, nationally, should be inspired by the same ideal.

JEANNETTE MARKS.
[Mount Holyoke College]
South Hadley, Mass.

# PROHIBITION AND VICTORY

TO THE EDITOR: A word of keen appreciation of the telling work the SUR-VEY has been doing recently in the matter of prohibition agitation of the right kind, with the ardent wish that still more effective work may follow! Adequate conservation of foodstuffs, fuel and man-power spells nothing less than real war prohibition. Why permit another minute's delay if we believe in our cause, and if we really love our sons and wish them to come home safe again? Why go on longer with this paying tithes of mint and anise and cummin, and omitting the vastly weightier matters of the law? There must be no uncertain sound in the insistent and united demand to have done with this huge anomaly, which threatens to be so disastrous in its consequences, if permitted to continue

The action of my class in Conservation of National Resources may be a hint to other forces that should be mobilized everywhere and at once—therefore I pass it on to the Survey. The following telegram was sent to the two United States senators from California and to the representatives of our districts: "Class in National Conservation, University of Southern California, by unanimous vote, respectfully urges necessity of enacting war prohibition in interests of food and fule conservation. With multitudes of good citizens we make vigerous protest against longer permitting vast amounts of foodstuffs, fuel and man-power to be diverted and wasted in manufacture of alcoholic drink, thus seriously impairing chances of early victory. We insist on fair play to millions who patriotically respond to requests of Food Administration."

Yours for prohibition and victory, ROCKWELL D. HUNT.

[Department of Economics, University of Southern California.] Los Angeles.

# **JOTTINGS**

WILLIAM HOWARD TAFT and Frank P. Walsh, who was chairman of the United States Commission on Industrial Relations, have been chosen to represent the public on the Federal Board of Labor Policies [the SCXXXY for February 23] which consists of five representatives of organized labor and five of employers and employers' organizations, each group selecting one admitted to the proper selecting one admitted to the proper selection on the proper selection of the proper selection of the property of the property or the property of the property of

EXTENSION of time for applying for government insurance has been granted to April 12 for all soldiers and sailors who were in military service before October 15, 1917. Up under the law, 95 per cent had applied, Secretary McAdoo announces. The total insurance applied for was over eight and a half billion oldlars. Camp Dodge, Jowa, ted with more than 99 per cent of its personnel October 15 have 120 days in which to apply.

BIRD S. COLER, new commissioner of public charities in New York city, has dismissed William B. Buck, director of the hospital for tuberculosis patients at Sea View Farns, Staten Island, after preferring charges of neglect against him. These charges were characterized as "trivial and frivolous" by Leonard M. Wallstein, secretary of the Criticans Union, whom Commission of the Country of the Coun

LAST Saturday the Supreme Court of California denied a new trial to Thomas J. Mooney, convicted of participation in the bomb plot which resulted in the death of ten persons during the preparedness parade in San Francisco on July 22, 1916. A petition for a rehearing of the case has been filed, but it is not expected that the court will but it is not expected. The court will be governor or by President. Wilson can now save Mooney. Great hopes had been enterrained because of the recommendation by the President's Mediation Commission, consisting of two employers and two labor men with Secretary of Labor Wilson at the bead, that the evidence in the case was under a cloud of supplying and that Mooney should

SPAIN has lost her most widely known and revered social reformer, Gumersindo Azcárate. Though for long a republican leader, he was honored by all parties. Twice recently was he consulted at times of ministerial crises by King Alfonso, who was rep-resented at his funeral along with the expresident of Portugal, Machado, ministers, ambassadors, professors and working men. Azcarate was president of the Institute of Social Reform at Madrid, and it was at one of its meetings that he was overcome by the attack which the next day ended his life. Social practice and legislation in Spain very largely derives its stimulus and leadership from the Institute of Social Reform. Among recent measures which it has sponsored is the opening of night schools for adults in public school buildings by authority of the minister of public instruction. A national congress has been called to meet in Madrid in April to discuss methods for protecting, educating and reforming delinquent children.

# THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

# ASSOCIATES INC.

#### KEY

If you know the name of the agency or organization, turn direct to the list-ings (3d column) for address, corre-sponding officer, etc. [They are ar-ranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you meant to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject clas-sifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agenciee listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your com-munity or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

# WARTIME SERVICE

"MARTIME SERVICE
"IJON the SURFEX can serve"
II was the rubject of an informal conference held early in April, in our library, to which we eashed the securious of perhaps neverty national social service organisations. The conference was a until in felling plat as a formation of the service organisations. The conference was a until in felling plat as a means for letting people throughout the country have promptly of needs and national program—how, when and where they can count locally—the and national programs—now, when and where they can count locally—the SURVEY was at the threshold of an opportunity for service such as has seldom come to an educational enter-

The development of this directory is The development of this directory is one of several steps in carrying out this commission. The executives of these organisations will answer questions or offer counsel to individuals and local organisations in adjusting their work to emergent warine demands.

Listings \$3 a mosth for card of five lines (in-using one listing in SUBJECT INDEX by full ame and three by initials), fifty cents a menth for such additional line. No contracts for less than tree months. Additional charge of \$1 for each lange of copy during three-month period.

# After Care for an Invasion'

By Paul U. Kellogg

EDITOR THE SURVEY

T a house on the shore, near Rimini, we found a group of twenty refugees, farmers from San Vito del Tagliamento. There had been twenty-one of them; but a seventeen-months-old baby had been ill at the time of their flight, the train on which they were brought from the war zone was held up for thirty-six hours, and he died at the station from exposure. The father, a lieutenant in the Alpini, had received word of the death and was here for a few days to see and comfort his wife.

The group was made up of an old grandmother, one married daughter, the wife of a son now in the military hospital, and grand-children. Both of the young men had been volun-

teers since the beginning of the war.

When the Austrians came down in late October, the grandmother had started out ahead of the younger women in an ox-cart. Four children came with her. The daughter had stayed on a day longer than the others, in the hope of saving some of their things, but a bombardment had set in and she had to leave without anything. This daughter walked eighty kilometers before she got on a train. The train was bombed. Altogether it took her ten days to overtake and find the rest of the family. The grandmother showed us the treasures she had herself brought from home. She had torn from its frame, to save it from the Austrians and bear her company in her flight, the canvas of an oil painting of her dead husband, a soldier with Garibaldi. His was a strong, free face, broad of brow and hairy as Walt Whitman's. His features were brought out even better in a photograph which the widowed grandmother carried in a frame and with it the four war medals which had been granted him for gallant service. But she had another treasure-more prized if anything than any of these other relics of her man. She unrolled it for us-his red shirt of the war of liberation.

She had, also, a bit of the shell which had wounded her son, two months before, worn on a string around her neck. And in the yard was another treasure trove or fellow refugee, as you like; namely, a shaggy profughi dog, which had come all the way with the family. They had been proprietors, these farmers, had owned their own home: had lost everything. They found the empty house on the shore cold and Tribia to the final strike in a prires of three. The first and second were published in the Sexvex for February 2 and February 2 wange the title. Seven Weeks in Italy, the Response of the American Red Cross to the Paris and it is reprinted to the United States.

bare, if sumptuous; they had blankets enough, but not enough food. They were casting about in their minds as to what next; and their experience may well illustrate three stages in the concern for refugees.

THE FIRST STAGE in caring for the back-wash of invasion—the sudden rush from farmhouse and village and town, afoot, in wagons, in camions, to such points on the railroads as they could get passage—was passed when the American Red Cross entered upon its emergent work in Italy.

Its participation began under Murphy; Taylor Stanton and Hunt in the second stage-the government transport of trainloads of refugees from the war zone to the great distribution centers and thence to the provincial capitals. But such was the congestion that by no means all of its larger consignments of supplies, however rapidly gotten together and shipped, reached their destinations while the flood tide was in transit. Had the stream continued, or doubled or trebled-and of that there were tense forebodings-they would have been ready at hand. As it was, through such supplies as got through; such canteens as could be opened, as at Rome, Chioggia, Genoa, Ancona; such helpers as could be sent out, or mustered individually or in committee, as in Genoa and Milan; and, more especially, through rapid advances of money to consuls and field delegates and Italian agencies, who laid their hands on things to be done locally, as in Leghorn and Florence and Venicethe Red Cross played a spirited, if scattered, part throughout November.

And as it was, its supplies were employed forthwith to help meet the no less emergent needs of a third stage—the immediate care of great bodies of refugees at points of settlement. Of the need for that help every day's mail in early December, every report from field delegates and traveling inspectors, added to the weight of testimony. This testimony came from Sicilian towns, where work was difficult to obtain and local milk was unobtainable for mothers and children; from villages where refugees were sleeping on the ground and whole families where refugees were sleeping on the ground and whole families in the Appennines where the corn crop failed, last year; from towns in Emelia where refugees were still sleeping on the damp straw without beds; from seacoast villas, fair to the eye but void of blankets; from crowded tenements in Naples—the antithesis of the clean, open country of their origin; from the antithesis of the clean, open country of their origin; from

THE DESERTED WATER-WAYS OF VENICE

city had shrunk to 60,000

industrial districts in the Northwest, where work was plenty but where there were nonetheless great numbers of broken families, sick, or infirm, or without bread-winners, and where fuel was scarce; from wherever, throughout Italy, refugee families were without adequate footwear and underwear, with scant bedding and without the rudiments of household life where food was short before the refugees came and the people formed in long uneues for their meager daily allottnents.

In addressing itself to this third stage-and to the winter's task before its permanent Italian commission, which reached Rome in late December, two main lines of procedure present themselves to the American Red Cross: (a) The establishment of distinctive relief agencies of its own, such as a hospital, a refuge, a popular kitchen, a station canteen, a housing committee; (b) Work through existing Italian agencies, through grants of financial assistance, supplemented wherever possible, by appropriate forms of personal service. In general, the Red Cross committee of investigation which toured Italy in mid-November,2 favored the latter method, as the more permanent. It recognized, however, that local conditions might require direct action and did not wish to recommend any policy which would make it impossible or even difficult when the conditions required it. The system of responsible regional delegates for consular districts [outlined in the SURVEY for February 21, working closely in conjunction with American consuls and Italian officials and agencies, afforded a framework flexible enough to serve both cooperative and direct action. In this connection the Italian high commissioner for refugees issued a statement in late November calling on the prefects to second the work of the American Red Cross, to "put the delegates of that most provident institution in friendly relations with all our committees" and permit the Americans "freely to expand their activity without bureaucratic hindrances."

Turning from questions of organization to the substance of the relief problem, the committee took up the challenge of

\*\*Ernest P. Bicknell, Red Cross Commissioner for Belgium; Edward T. Devine, chief of the Bureau of Refugees, Department for Civil Affairs, France; and the writer.

circumstance, now that the first emergency calling for assistance in leaving home and in transit had passed. Its findings, as drafted by Mr. Devine, offered a program for dealing with a civil population dispossessed by invasion, at once more opportune and constructive than has been promptly to hand in any similar emergency; but one which, it is to be hoped, aside from its practical bearings in Italy, may have only historic interest. It drew on experience in France and Belgium; it sought to forefend against settled evils which the three years had revaled, and it applied the general principles of disaster relief developed by American social workers in handling the results of floods and other natural calamities.

This concluding Italian article will follow the main outlines of the committee's report.

It took up, first of all, the possibility of a further retirement-for example, to the line of the Adige, which would affect several large towns, including Verona, Vicenza, Padua and Rovigo. Definite orders had been issued by the Italian government against the evacuation of this new territory, even in case of invasion. The inhabitants had been officially advised to remain where they were, chiefly no doubt for the reason that with the current limited supply of food it would be impossible to care for so great an influx of population in the remaining part of the country, and also because property would be sacrificed which might be preserved by the owners if they remained to look after it. While these reasons were valid, it was to be auticipated that in case of retirement there would be a great exodus on the part of those who would not wish to remain within the enemy lines. Such a retirement, as a consequence, would be accompanied, like that from the Friuli, by all the more confusion and hardship because not included within the plans of the authorities or even contrary to their policy. To quote the report-which would have application in case of any untoward military developments this spring:

The American Red Cross should be ready to cooperate in meeting any such second emergency. The first came without warning, but for any preventable hardships resulting from further possible retirement there would be no such excuse. Ample supplies of blankets, clothing and food should be collected as far north as Bologna, in greater quantities in Florence and in the larger centers to which the refugees will be sent—to the West, to the South and the South the refugees will be sent—to the West, to the South and the South cast. For those who move westward the natural place for the storehouse would be in Milan, where the Umanitaria, to which we have referred, the Bonomeili, a smaller organization with similar faelilities, official authorities. For those who go down the East coast, the stores and hospital faelilities established for the Venetian refugees at Rimini and food and clothing stations at Ravena and Ancona would come into play. The main stream, however, would come through the central funnel at Florence and we would emphasize the great importance of having extensive stores at Bologna and Florence, available for instant use by the proper agencies in those places on south a relief program could be worked out more deliberarily at Turin, Genoa, Naples and in Sicily, but at each place we should be ready to give assistance at the very moment of arrival.

Aside from the possibility of a second great emergency, there were certain special movements of population in which the American Red Cross had a legitimate interest. The most important of these was the continuing evacuation of Venice. Apart from any question of a nearer approach by the enemy. it had been thought advisable, as already pointed out in these articles, to evacuate dependent civilians from this city. Fortunately it was possible to plan this deliberately and in such a way as to prevent the indiscriminate scattering of the population, although many inhabitants of Venezia were, of course, included in the original rush of refugees to the South and West. The gradual removal, insofar as it was subsequently carried out, contrasted with what happened in the first days of the invasion, and has been compared with the swarming of a hive. Upwards of twenty thousand colonists were thus taken to certain villages selected for the purpose in the neighborhood of Rimini. Many of them had been employed in Venice in workshops established for the purpose of giving needed employment to women, and the equipment of these shops was transferred bodily. With Red Cross funds, a hospital for the benefit of the colony was put in charge of a Venetian physician, a member of the Italian Red Cross. Altogether this was an extraordinarily interesting experiment to which the American Red Cross gave assistance, in the hope that it would influence the handling of the refugee problem elsewhere.

Another special problem to which the committee called the attention of local authorities was that of the children in the actual fighting zone. In its visit to the Piave front it saw scores of such children near enough to be under shell fire. Here the plan adopted behind the fighting lines in Belgium was recommended, for gathering up such children and caring for them at points not too distant from their homes, where schooling facilities could be provided and their parents kept informed as to their whereabouts and welfare. Thus the reproach of exposing children of tender years to the physical dangers of the actual front could be avoided.

A third task discussed by the committee with General Diaz and with the local authorities of Padua was the removal of the aged and the sick from the fighting zone and from the towns immediately behind the front. The subsequent bombing of these towns gave immediate point to this concern, apart from the possibility that fighting should sweep through the district, and apart from the general policy mentioned that in case of invasion the civilian population should remain. A sum of money was left with the chairman of a provincial committee at Vicenza, a bishop whose palace yard harbored incidentally some picturesque fugitives—the bells from parish churches in the battle-torm mountain country to the North.

The committee made its report in the third stage already referred to as the period of arrival and first settlement, or, more accurately, as the period of distribution. There were still many refugee families in every part of Italy sorely in need of blankets, mattresses, underclothing, warm suits and shoes, and food. Therefore, although the first mergency was past, the committee held it to be essential

that the American Red Cross, both at its central headquarters and in its local organizations, should hend every effort to get supplies of these things as rapidly as is humanly possible, acutally delivered to the suffering families and individuals. This should he a first responsibility on all local workers to supplement what the official as our resources go that every refugee acutally has these essentials. Responsibility as to just how to do it should be decentralized, but

emphatic and repeated insistence that it should be done should go persistently from headquarters to every locality where we are or can be represented. The general problem of food is, of course, one for the government, but condensed milk for babies and other kinds of special diet can be included in our supplementary relief measures.

The first of the more permanent problems of resident refuses was that of health. Suffering and privation had left their mark on hundreds of men, women and children. The health work took various forms, as for example, a special refuge for sick and infirm, established by the American committee in Milan; the taking over of beds in existing hospitals; the organization of a traveling dispensary at Rimini, and the systematic inspection of refugee families to discover persons in need of medical care or nursing, by the physicians of the prefecture at Messina. Better than any of these, the committee advocated:

well-rounded health centers with various special services by American dectors and nurses who could familiarize the communities in which they work with the methods and ideas of American preventative health work. This again would be in line with plans which the French communities, and if such health centers could be established with the cordial approval and cooperation of anaitary officials and physicians of the local community they might become the most inspection of the control of

Next to health, the most urgent refugee problem was that of housing. The committee found refugees living in hotels,

THE BED CROSS COMMITTEE OF INOURN

Outside the American consulate, Venice, November, 1917. Consul Carroll (in civilian clothes) had the distinction for two years of being the custodian of the Campanile, neutral guaranter that it was unused as an observation post, and holder of the only key to the tower hospitals, convents, schools, all kinds of converted buildings, some admirable as far as physical comfort is concerned, others leaving much to be desired even in this respect. It held that

this manner of life is one which should be ended as soon as possible. Even if clean and warm and commodious, they seldom afted possibility for a pormal home life, for privacy, for antural employment with the properties of the properties of the strength of the properties of the strength of the wards of a hospital under conditions as in strutionalized as those of an almhouse, as promiscous as those of the steerage of an ocean liner. They had excellent beds, comfortable mattresses and the constant statenion of a doctor. Men, women and children were living, eating and sleeping in the same large ward. If they had been in need of hospital eare it was immediately forthcoming; but they were quite well and able-bodied. Here they had been than three weeks with nothing to do except to matched been for more than three weeks with nothing to do except to matched bods and keep the ward in order. This is only an extreme historic bods and keep the ward in order to the contract of the properties of the pr

naturally be taken into account. Of course, the worse conditions are not to be found in the refuges, but in overcrowded rooms in private tenements or in old and filthy hotels. We have frequently seen eight or ten, and in one instance as many as fifteen, persons in a single living-room and it is an urgent part of the housing problem to enable such families to move from their congested and unsanitary "furnished" rooms into decent dwellings. We must bear in mind that the refugee families have in many instances been accustomed to very much higher standards of living instance over accessions to very moch ragine annual of our manifest where they now are. Many of them of no property and of them flowers the manifest where they now are. Many of them own property and of them household goods, which they have had to leave behind. They are in the position of people who have lost everything by a fire or a flood. They are not in danger of being fujired by prompt for or a flood. They are not in danger of being fujired to the prompt of the property and generous assistance in such an emergency. They are in grave danger of demoralization and injury from being left in their destitute condition without employment, without the privacy and whole-some atmosphere of family life, and without the social environment of the neighborhood, to which they have been accustomed. The best form of relief, therefore, would seem to be assistance with furniture such as would enable them to take suitable accommodations in a place where by their own labor, supplemented by the government allowances, they can become self-supporting. To make good some part of their war losses in this way would be analogous to social

Various estimates made for the committee by practical people put the cost of supplying beds, table, chairs, cooking utensils, etc., at from two hundred and fifty to five hundred lire per family. In Naples and Palermo, the committee appropriated fifty thousand lire each to be used in this way and recommended that some such work be developed in every community in which refugees were likely to remain. The American Radiator Company in Milan helped meet the need for beds by turning the pattern room of its factory in Brescia into a temporary furniture factory. In some localities an intermediate step was being attempted by moving refugees from congregate shelters, cheap hotels and barracks in the neighborhood of stations into better-class hotels or other buildings. There was some objection to this step, but as carried on by an active committee of hotel men in Naples, the considerations in favor of it were convincing.

In general, the housing problem was found to be closely associated with that of employment, which at the outset treeived comparatively little attention. Reference has been made to the Venetian plan of holding groups of workers to gether and moving the industrial unit as a whole. In several communities workrooms were early established by varies agencies, ranging from very informal attempts to enable women to make the clothing for their own families, to the large and well-equipped factory in Rome conducted under the auspices of a civic committee to which the American Red Croscottributed one million lite.

In two cities the committee gave money to aid in maintaining workrooms. In connection with such workrooms, or even independently of them, where women were regularly employed.

there had been established in some instances day nurseries or maternal schools where young children were cared for during the working hours. All such plans gave rise to the familiar problem as to whether women should not be aided to remain with their own children, rather than helped by means of such agencies for the care of their children. A special question hung on whether the governmental subsidy was to be discontinued when wages were earned. While some latitude was given prefets in this regard, the general policy was to continue onehalf the subsidy after the refugee had taken employment.

In a few instances, as at Milan and Turin, employment agencies, official or voluntary, early attempted to find work for refugees, and at Messina inquiries were set on foot by the prefet among the various towns of his province, which would enable the refugee population to be distributed in accordance with opportunities for suitable employment. The Ministry of the Interior in Rome stated that this whole subject, which was perhaps necessarily ignored during the first great rush of refugees, was receiving serious consideration and that the ministry was relying on the prefets to organize local employment agencies or other means of placing people according to their aptitudes and experience. An interministerial advisory committee has been appointed; and the committee of inquiry held that if the American Red Cross cooperated in hastening the organization of a national scheme for dealing adequately with the subject it would be a very wise and appropriate use

Still another problem to which its attention was called in more than one community was the moral hazard to young girls arising from the enforced movement of population. Attractive young girls from country districts in the far North were to be found in the streets of Naples exposed to dangers to which they are wholly unaccustomed and against which they had not been protected by their education or their previous experiences of life. Not only the ordinary dangers inevitably resulting from separation from their kindred and friends and the safeguards of their own home neighborhoods, but the actual menace of the white-slave traffic had to be taken into account. A committee of women had been formed in Naples for the protection of these refugee girls, and in Palermo the Red Cross gave a thousand lire to aid in opening a building formerly used as a monastery, as a home for orphan refugee girls of from twelve to eighteen years of age. Here was an opportunity for American women to participate actively, either by committees formed especially for this purpose or through some existing society.

Because of limited time and because of the prominence of the refugee problem, the committee gave only incidental consideration to the question of assisting families of soldiers, or to that of aiding other civilian victims of the war, such as widows and orphans, soldiers disabled by wounds or discharged because of tuberculosis or other disease. It was felt to be desirable that the American Red Cross should help meet these needs if its resources permitted, but it was pointed out that fundamental to all of them was the amount of allowance made by the government to soldiers actively in service, to discharged soldiers, to the families of soldiers and to refugees. With the scarcity of food and fuel and the constantly increasing cost of both, the committee received frequent suggestions that Red Cross funds be used to supplement these allowances. The committee reported:

Obviously, neither the American Red Cross nor any other private agency can undertake to make good the shortages in income and food supply of a nation. Soldiers' families and refugees—and, for the most part, refugees belong to the families of soldiers—make up a large part of the population of Italy.

ON A SUNNY STREET IN SICILY
Group of country boys from the North

If we were permitted to make only a single recommendation (in the hope that it would be adopted) his would be that the American Red Cross should use its utmost influence to secure the importation of food into Italy during the next few weeks and months. Fuel is also needed, but, above all, wheat and corn, cornmeal being especially the whole population, but the refugees, whose needs we have been asked to investigate, are naturally at the very margin and their meeds in this respect may therefore be taken as the ultimate need of the country. We have frequently been told by Italians in responsible to the present crisis than either men or munitions from America.

Clothing is also needed, especially underclothing of all sizes, and materials which can be made up into clothing. Fuel is needed—urgently needed—for cooking the meals of the poor as well as for running trains and factories. But the elementary food supplies should be given precedence. . . .

We are, however, of the opinion that, although the American Red Cross must leave the viral question of a general food supply to governmental and commercial agencies, we should ask for the largest permissible alloment of carge space for the importation of condensed milk and hospital supplies (for civilian relief as well as for military hospitals), underclothing, warm outer clothing, shoes (all made up into underclothing, and children's clothes. Such supplies as can be imported or purchased in this country will be needed, as we have indicated, for two main purposes: first, to meet the scute needs during the winter months of refugees and other civilian families in the places where they are living, insofar as such needs can not be met by Intains official and voluntary agencies; and, second, a second emergency if it deced places in sufficient quantilies to meet a second emergency if it is considered.

Provinces which had less than the government minimum of flour for the winter months ahead were saddled with thousands of refugees. The need was universal and urgent. A picturesque story is told of the ingenuity of a lieutenant representing the Ministry of the Interior in meeting a food

Many walked five days before reaching the trains, and then it took eight days and nights to get to their destination in the south of Italy. Large numbers of families became separated and all newspapers and long lists of inquiries

crisis in one of the Adriatic coast towns. Six thousand refugees had been installed in empty summer resort buildings along the shore. They had had no bread that day and the town itself was on short rations, the people standing in the queues. If the refugees went many hours more without food it was feared they would descend on the shops and a riot would result. Yet the local authorities were without supplies and the town baker said that flour was running so short that he only received each night sufficient for baking the meager allotments of bread for the next morning. "But." he was asked, "what would you do if there were a fire in your bakery at night and it burned down, bread and all?" He would call up the provincial capital, he said, and get them to hurry over bread from their central stores to stave off trouble. The lieutenant took him at his word and stepped to the longdistance telephone. A camion full of bread responded to his supposed fire-call and he tided over the situation.

Subsequently, at Paris, when the inter-allied conferences were on at Versailles in January, the Red Cross submitted evidence as to the food situation in Italy to the representative of the United States Treasury Department. This independent testimony of American observers was immensely timely in its bearings on the reconsideration of allotments of shippoing tonnage.

NEXORABLE circumstance not only made the report of the earlier Red Cross commission of inquiry to Italy out of date, but found the Red Cross without a field staff there when the emergency came at the end of October. By the swift despatch of trained men and supplies from its French organization, and the prompt volunteering of Americans resident in Italy, it recouped the situation.

The temporary staff returned to France in December, leaving the field free to the new permanent Red Cross commission to Italy, operating under the commissioner for Europe, with headquarters in Paris. No attempt can be made here to chronicle the work of the new body. But it should be pointed out that for its permanent organization, the American Red Cross has entered upon what the allied armies and governments have seen the need for and are only now approaching—unified action along the whole western front.

The emergent work carried on in seven swift weeks, intervening between the coming of the Red Cross emergency men and their successors, has been set down in these articles—the physical relief and the spiritual reinforcement which hurtled obstacles at a time when to operad a single blanket more in an aille or stick up a flag at a station counted incalculably. More important, underneath that emergent work, went forward under Commissioner Murphy the laying of foundations for a permanent work, kindred and comparable to that in France.

One of these foundations was the constructive program of help for refugees through which the Red Cross is cooperating in preventing here what happened in France—the crystallization of abnormal living conditions, as untoward in their consequences as the more spectacular flight from Friuli.

Through Mr. Bicknell, who remained in Rome throughout December and January, the experience and investigations of the earlier period were with rare ability brought to bear in molding the work for civilians along constructive lines.

# F. W. Matthiessen—A Trustee for Democracy

By Graham Taylor

HEN the SURVEY presented the unique development in and related to the Tri-City High School, jointly possessed by the adjoining towns of La Salle, Peru and Oglesby, Ill. [October 7, 1914, Building a Civic Center Around a Tri-City High School], the modesty of the man to whom these cities owed their chief distinction and pioneer industries forbade even the mention of his name. But now that their first citizen has finished his citizenship at the ripe age of eighty-three, the name of Frederick W. Matthiessen should no longer be obscured either by his own self-effacement or by the democratic motive and manner of his public service. The spirit and civic loyalty of the man are so exemplary that they should be set forth as an incentive and enouragement to others for making their industrial leadership serve their citizenships.

Coming from Germany with the best metallurgical training and equipment which its most scientific university training could furnish him and his young fellow-student partner, E. C. Hegeler, he located their pioneer zinc works at this point in Illinois after a wide search for a location near the best natural deposits of the soil and where transportation facilities would develop and radiate most widely. While his fortune was increasing with the growth of his diversifying industries, he never seemed to forget that he was debor to the towns which were the base of his operations, whose citizens he never failed to recognize as his neighbors and fellow workers.

For ten years at their insistence he served them as mayor. His first administrative act was to change the pending plan for the water works of La Salle from that of a private corporation to a municipally owned and operated plant. Although the city had previously incurred a debt beyond the legal limit, the water bonds sold the more readily because they bore his name. As his own contribution to the enterprise he installed the best pump he could secure, which after many years of service still supplies the city with water. A costly sewer system soon followed, and the city was also enabled to own and operate its own lighting plant. After he resigned as mayor he offered to cancel enough of the debt of the city to bring it within the legal limit if the citizens would raise \$5,000 for some new local improvement. They did so by installing a boulevard lighting system, and Mr. Matthiessen forthwith cancelled \$46,000 of the city's outstanding bonds.

On and on he went, as his own gifts could stimulate his fellow citizens to do their part in meeting public needs, or in inspiring them to secure unique advantages for their town. Thus bridges, roads and fences were built. The tri-city high school was erected and then remodeled. To its equipment Mr. Matthiessen himself added a manual training and domestic science building. The hygienic institute developed from his selection and employment of a high grade bacteriological and sanitary expert to serve the three towns, in cooperation with their health officers, under the title of Tri-City Health Department. With it he connected a scientifically equipped milk station as a memorial to a daughter who had died. A dental addition was made. An isolation hospital was planted in one of the towns. A fine medical library completed the great equipment of the institute, which he endowed with a fund of \$150,000.

Taking occasion of the need for a separate boiler plant he proposed that if his fellow citizens would contribute \$25,000 he would erect a recreation building, which he did at the cost of \$100,000. This great equipment, including a fine swiming tank, was soon supplemented by an athletic field covering several acres, with an outdoor swimming zool and well-appointed bath-houses. In these public enterprises he invested over half a million dollars. His private beneficences in and beyond his own community are uncounted, and by him unnoted.

Along with and beyond his gifts of money, Mr. Matthiesen gave himself, his time, his rare intelligence, his business ability and his vision of the future. His training and practice in the exact sciences seemed to increase rather than diminish its tasts for wide reading, his passion for the philosophic interpretation of history in the making. And yet his deeper misght and farther vision inspired and intensified his desire to serve his belief in democracy. That faith was not only an ideal and a philosophy with him, but it was his life. He

lived it. Although his simplicity and modesty so controlled him that he could neither obtrude himself upon others, nor court the attention of others to himself, yet he willingly shared with the whole community all he was and much that he had. Drawing only a small circle around the privacy of his countryside home, he threw open to the public the rarely beautiful Deer Park surrounding it.

To a rare degree Frederick W. Matthiessen fulfilled in his personality and achievements both the ideals and exactions of a democratic gentleman as defined by Prof. H. S. Nash in his Genesis of the Social Conscience: "He is a gentleman in a true democratic sense just in the measure that he has the art of finding himself in an ever-growing number of person of all sorts and conditions. He must face all that is disagreeable and problematic in democracy, concealing nothing, blinking nothing away and at the same time he must keep his will strong and temperate, so that its edge will never turn. To meet all his social obligations properly, to pay all his political debts joyously, never to throw a glance over his shoulder to the monastery—this is a mighty day's work."

And this day's work of his is done, but his spirit will live and spread, for it is a part of the very life of the community, of which one of his fellow citizens who knew him longest and best called him "trustee."

# Tapping New Reservoirs

# An Experiment in Neighborliness

By Mrs. John J. O'Connor

DISTRICT SUPERINTENDENT LOWER NORTH DISTRICT UNITED CHARITIES OF CHICAGO

HE whole world is disturbed. Everyone's world is disturbed. Our nation, our city, our homes are changed. Every resource, national and local, in industry, in the professions, in society, is being mustered to meet the constant, often sudden demands. Home charities are trying to adapt themselves to the clange—from interests in home and home city problems to the nation's needs. Local contributors have in great numbers become contributors to national agencies; local volunteers are pledging and giving service to national organizations; even local charities are finding ways to serve the whole country.

Still the home is here; the city is here; the local poor are here, in increased numbers. In this situation local charity must conserve its every resource; it must find and tap new reservoirs of strength and support. As often happens, these new sources of strength are really old, but unrecognized and undeveloped. We have found at our hand in the Lower North District of Chicago a kind of helpfulness, a source of strength that has always been present, always active, but never organized, never related to our program—a tremendous power, but never harnessed to work steadile.

That helpfulness is a vital interest which is easily awakened in one poor person for another, is expressed in the old idea that the poor are good to the poor. Once recognized, it was easy to begin its use. Thus grew the idea in the form of the Group of Good Neighbors, which is proving a source of great strength, not only to the organization, but to the group itself.

Because we were confident that those who had received assistance from us would be eager to pass that service on to others, we asked as members the poor whom we knew-people without money or material resources, but capable of valuable personal service; people who, because of their experience in being poor, had common sympathies. They know what it means to live a hand-to-mouth existence, to depend on casual and underpaid employment; they know how little incentive there is to women, hard-worked and poor, to keep person or home attractive and clean; they know what sweatshop labor does to minds and bodies; they know what happens to men who are underfed, discouraged and hopeless; they know why children are stunted and rickety; they know the heavy burdens of debt and sickness and disease. They, more than we or any others, can give the sympathy and comfort of the things so inexpressible in words, but so well understood in the outstretched hand and the words, "I know." Has not the emphasis too often been placed on economic issues and too little on the warm, human, kind service of good neighbors?

An attempt was made last year in the district work of the Chicago United Charities to change the attitude of social attack. Too often has the emphasis been placed on the tragic affairs of the past, rather than the happy opportunities of the present and future. Someone has said that you can get as much out of "bein' happy as bein' miserable, only you get it quicker"; and this method of getting results was applied to social work. The objective was the home, so often a place of

worry and disorder and tragedy. Here was it worth while to attempt transformation, to bring in light and inspiration. Good times were planned for our people in their homes. and the families themselves were made as responsible as possible for the entertaining. Luncheon parties were popular, for they gave better opportunities for social intercourse and stimulating home interests than many other forms of meeting. The hostess, who had developed pride and interest in her home under the visiting housekeeper, arranged and cooked and served the luncheon. The meal was a lesson in dietetics and a strong argument against sausage and sweet rolls and chocolate eclairs of the much-used delicatessen shop. After the meal, which was the subject of much comment and discussion, the afternoon was spent in sewing, reading and songs, The home was the object of much interest and as the hostess had housecleaned at least two weeks for the social event, many guests were stimulated to a new pride in cleanliness and order and attractiveness.

The organization of the Good Neighbor Group is simple. Each field visitor gives to the worker who is in charge of the group a list of individuals from her families who are able and willing to serve. The worker then meets these people either individually or in groups. Each woman signs her name to the membership card with the kind of help she can give and the time it can be given. Later, a special request for her services is made and under the supervision of the visitor she starts her work. Once a month the Good Neighbor Group meets, the work is checked up and a report is given of the service rendered.

Though the plan has only recently been formulated, the results have been helpful and stimulating. Never in our eager search for volunteers have we met with such universal and immediate response to our appeal to aid as among these people. In every case they have replied that they will do anything we ask. In fact, the mere thought of giving, instead of constantly receiving, seems to bring pleasure into their uneventful lives.

The mutual assistance rendered so far is worthy of mention; sewing, cooking, cleaning, care of children whose parents are incapaciated, caring for invalids, taking patients to the dispensary, and giving practical nursing to persons under medical care, on the advice of those in charge. Many of the women prefer sewing in our district office, helping to make new garments, or to recut and repair old materials. The reactions from the people themselves have been interesting. One woman, when asked if she cared to join the group and to give her service for others, said, "Sure! I'd do anything for a change!" expressing quite tersely the need for breaking the drab monotony of her life and theirs,

Our one possible exception to the rather eager expression of a desire to serve came from an Italian, who said, "We come to America to better ourselves, not to help others; we want help ourselves." But is not that a strong indication that there is a distinct need among some of us for education along unselfish "give-and-take" lines? Carrie S., a big, husky woman, was quite overcome when little Mrs. F. came to help her. She said, "You, a tiny little thing, come to help me, great big thing that I am! It should be the other way around, and I'm going to do it, too!"

Old, little, blind Mrs, M, said to our field visitor she had never been so happy in her life as now. "Having these Good Neighbors come in to cheer me up helps me, not alone by the things they say and do, but by the thought that they really want to come, and are doing it in a neighborly spirit. The people who come through you are much more cheerful than those people who used to come in before. They grumbled too much and used to make me sad talking of their own troubles." Mrs. R. said, "It always makes my own troubles seem fewer and gives me a thankful feeling every time I come home from being a good neighbor to Mrs. M., who is so old and blind and helpless and alone-and yet so cheerful. I, at least, have my children and my health.'

We want the reaction this service will bring to our people, We hope that everyone in our district will realize through personal experience that the great value of service is in giving and not in receiving. We want everyone to gain the selfrespect and dignity and satisfaction which come to those who endeavor to improve living conditions and to better human lives. We want them to become co-workers in mind and heart with others who are doing similar work, whether as individuals or from an agency. We want every resident of the district to know the stimulation of being up to issues bigger than themselves. We want everyone to have the chance to serve without stint.

We feel that if our contact has been friendly, it will not be hard to arouse and develop the spirit of friendliness and helpfulness so vital to real neighborliness. Our people will be more intelligent, more friendly. There will be a tendency to "uninstitutionalize" philanthropy and all giving of reliet.

This is greatly needed today, for, as our cities have grown and our social agencies develop, charity has become impersonal and increasingly public. The poor of today are anonymous and remote. They are no longer our poor neighbors. Indeed, one doesn't know the neighbor of his own circumstance, let alone his poor neighbor, many miles away on the other side of the city, up a dark street of one-story frame buildings. Intimate, personal, neighborliness of the well-to-do in our city today must of necessity be expressed through an organization, if we are to avoid the evil of indiscriminate giving: but if we can strengthen it by adding the neighborliness of the poor, we will make what appears a stronger combination for the accomplishment of good.

#### THE FOLLY OF FREEDOM FOR FOOLS

THE biblical injunction against calling thy brother a fool is falling into the ling thy brother a fool is falling into worthy now to call him a fool before the whole world, if that is what he is, as to have him arrested for law-breaking. At least eight states have conducted surveys within the past two years and eight months to count the number of fools in their population, and seven have appointed official commissions to study the whole question of foolshine of foolshine of the foolship the study the whole question of foolships of the foolship the study the whole question of foolships of the foolship the study the whole question of foolships of the foolship the study the whole question of foolships the study the study that the study that the study that the study that the study the study that the study the study the study that the s

In all of this, the endeavor is to shut up fools-not in the sense of giving the wise men a rest by inflicting silence, but in the sense of permanently incarcerating those who otherwise might beget foolishness. Thus, legislatures have appropriated nearly half a million dollars to take care of fools, and another halfmillion is pending, Private philanthropy has donated \$121,000 for the purpose. Nearly every state in the union has at least begun to think about its fools, and at least twenty have, within the period of time mentioned, taken active steps to serve both the wise and foolish by keeping them permanently apart.

All this has happened during the brief lifetime of, and largely because of agitation by, the Committee on Provision for the Feebleminded. Much else has been done without its help. The com-mittee was organized in June, 1915, and has sent lecturers and field workers from its headquarters in Philadelphia throughout the country to arouse interest in the feebleminded. Its success is already written on the statute books of many states and in the improved care given to this class of the population. Although its expenditures have averaged only \$18,000 a year, the war has seriously cut down its income, and there is danger that it may have to close its doors.

Yet it was this committee that promoted and financed the work of the initial committee of psychologists that made possible the application of psychological tests to the men of the United States draft army. Major Robert M. Yerkes, director of the psychological division of the army, wrote to it: "We feel that we owe to you the initiation of our work."

In following up this work, the committee feels that there is a great field ahead. Approximately 2 per cent of the drafted men have been found to be mentally inferior. Their services can be used in camp life—in laundry, carting, care of horses, road repair, and even in food production. Plans for their use within the army are being prepared by the committee for presentation to the War Department.

The committee believes, also, that the records from the examination of the million or more men in the army can be made of great value for effective propaganda in regard to conservation of health, and points out that the United States Public Health Service and the state boards of health are suitable agencies for this service.

It believes, further, that capable field workers are needed for mental examination of women and girls frequenting the vicinity of camps for immoral purposes. There are no present means, it says, for identifying the mentally defective prostitutes, yet indications are that "half of these women belong in that class." In some states where camps are located there is absolutely no provision for the feebleminded. The discovery and segregation of the feebleminded prostitute could thus be made an excellent beginning of care for the whole class of feebleminded.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

# THE DRAFT LAW A HEALTH

IN 1915 a military movement in Massachusetts led to the significant conclusions that it is of first importance to provide physical efficiency and that military training as such should not come until the nineteenth or twentieth year at least. In 1916 a commission studied physical development and supported a bill in the legislature of 1917. The legislature didn't quite hitch the matter up in its mind and nothing was done. The matter is again before the people through a petition of the State Board of Education backed by a large number of private organizations and individuals.

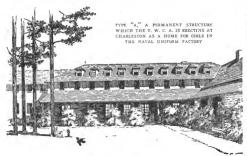

The significant figures of the draft are prompting thought. From 40 to 50 per cent of the men examined under the draft law in Massachusetts are being rejected. These are men between twenty and thirty years of age, not between twenty and forty-five, or any other less favorable period.

The people are beginning to realize that this physical unfitness is expensive, inhuman and unnecessary. We have never cared about it very much because we could import human labor as fast as we could use it up. That time has passed and, moreover, the draft figures are showing lithat it is our own sons who are below par. Thus the matter comes closer home. Efficiency along all lines and sentiment in all shapes demands action.

The bill provides that the State Board of Education shall appoint a director, with two assistants (one a woman), who shall have general supervision of physical education in the public schools and shall outline the work. Physical education is made to include directed play, games, athleties, camping and instruction in personal hygiene and sanitation of the camp, the home and the community. Not less than two hours a week in elementary schools and three hours in high schools are to be given, the extra time required being added to the school day if the local school board so elects.

The bill provides for the instruction

Daited of Google

of teachers and for teachers' conferences, for local advisory councils and for a general survey of physical education in the commonwealth. The system of physical education outlined by the director and approved by the Board of Education is to be introduced into all the public schools, but the introduction is to be gradual, and courses in physical education already in operation may be temporarily or permanently approved.

The director, besides his work in connection with the public schools, is to cooperate with cities and towns in providing adequate facilities for recreation and exercise in the form of gymnastics, playgrounds and summer camps. To this end it is provided that his vecation and that of his assistants shall not occur in

It is proposed, thus, to establish a system of physical education which will gradually permeate the entire population. This is equally the proposal of New York's new physical training law, now being administered with good effect. The aim is to make health, efficiency, a full life, the objective. A new objective is held to be necessary because medical and social workers have emphasized too much the things to be avoided—it is a better business to be striving for something than to be avoiding something. The goal will be the efficiency of every individual.

# NEW JERSEY'S NEW BOARD OF CONTROL

ONE of the quickest jobs on record of diagnosing a state's institutional needs and applying the administrative remedy was completed week before last when Governor Edge, of New Jersey, appointed the eight members of the new board of charities and correction of that state. Created by the legislature only a few days before, this board is the direct outcome of the recommendations made by the Prison Inquiry Commission

and the Charities Inquiry Commission, reviewed in the SURVEY for March 2 [Prison Reform by Daylight].

New Jersey now has a central board of control in addition to local boards of management for each of her charitable This central and penal institutions. board is charged with establishing broad lines of policy for institutional development. It must also appoint a chief executive or "expert commissioner of charities and correction," whose salary may not exceed \$10,000 a year. The commissioner in turn has power to appoint, subject to the board's approval, expert deputies or bureau chiefs, not exceeding six in number. These may be a director of medicine and psychiatry, a dietitian, a director of education, a director of industries, a statistician and a chief parole officer.

In recommending this type of control, the Prison Inquiry Commission declared that it was guided by the "tendency toward unification" that has been going on throughout the country for years. Central plans of organization, it said, have been evolved "in an effort to secure the efficiency that goes with centralized authority without sacrificing the local interest which, even at the cost of efficiency, is one of the most valuable features of government."

The new board is to have supervision, with the right of visitation and inspection, of all county, municipal and private institutions that receive state aid. Its right of inspection extends to all municipal and county jails, workhouses, almshouses and other charitable institutions of a public nature. All private charities that have to do with the support of dependents are subject to visitative.

The members of the board serve without pay. They are: Dwight W. Morrow, a member of the firm of J. P. Morgan & Co., who was chairman of the Prison Inquiry Commission and has been interested in social welfare in En-

glewood: Ellis P. Earle, of Montclair, director of several mining and plantation corporations, who was chairman of the Charities Inquiry Commission; Dr. William S. Jones, of Camden, interested in anti-tuberculosis campaigns and a member of the board of managers of the Glen Gardner Sanatorium; Dr. John Nevin, of Jersey City, for many years police surgeon of that city and a member of the State Hospital Board at Morris Plains; Richard Stockton, of Trenton, for the past three years commissioner of charities and correction under the law now superseded; Ogden H. Hammond, of Bernardsville, insurance broker, who served for two years in the state Assembly and was a member of the Prison Inquiry Commission; Frank A. Fetridge, of Newark, organizer of the Lathers' Union and president of the Newark Trades Assembly; Mrs. Lewis S. Thompson, of Red Bank, member of the executive committee of the State Charities Aid and Prison Reform Association, who has given much time to studies of school attendance and mental deficiency among the rural population of the state. The governor is an ex officio member of the board.

#### HOME COMFORTS FOR GIRL WAR WORKERS

HE Housing Committee of the Y. W. C. A., in letters addressed to the secretary of war and to the chairman of the Housing Committee of the Council of National Defense, asserts that the housing needs of working women are quite different from those of working men; that they do not like to live in such large units, and that they require more supervision. However that may be, the Y. W. C. A. has had so long and so successful an experience in providing good living conditions for girls that its recommendations will, no doubt, receive the most careful atten-

Both in connection with the training camps-where a much larger number of women is employed than is sometimes realized-and in the housing of girl munition workers employed in new plants where there is as yet no accommodation for single women under ordinary conditions, hostels have to be provided. They have to be of a size enabling the most economical management and of a character insuring health and comfort. As regards size, the committee considers that usually it should not be for more than one hundred and fifty or less than seventy-five girls. As regards character, the hostels must never be without an atmosphere of home life.

"Too much emphasis," says the committee, "cannot be placed on recreation. No matter how comfortable and attractive the living quarters may be, the girls will not be happy and contented unless there is adequate provision for social and recreational life." Hence, in the buildings which it has planned there are spacious sitting rooms as well as diningrooms, and the latter are large enough to be used as gymnasia or for dancing.

The proper grouping of girls is as important as good room accommodation. The committee suggests that older women should be given more independence than quite young girls, also that they will feel happier in smaller groups and need more quiet. Separate provision is, of course, required for colored girls, and experience has shown that it is best to house separately non-English speaking foreign girls until they have learned the language and have become used to American manners.

#### MAKING SOCIAL SURVEYS "ON HIGH"

N editorial writer once characterized the SURVEY as "that unique journal which could send a man into a community, who, by merely wetting his finger and holding it in the air, could tell what was civically wrong with the life there." Meant as praise, this would hardly bear the approval of careful "social surveyors" today; nor do we admit the truth of the picture. Nevertheless, an approximation of this emergency service has lately been rendered to two whole states, with excellent results, and has just been rendered to a

Hastings H. Hart, director of the child-helping division of the Russell Sage Foundation, after diagnosing the social needs of West Virginia and Florida and making recommendations for improvement, has spent two weeks in South Carolina, A social "war program" for the people of that state is the result.

How closely South Carolina's normal needs (or those of any other state, for that matter) are tied up with her war needs is illustrated by Dr. Hart's recommendation in regard to the care of dependent children. The number of orphans and other dependent children of soldiers will be much less in this country than in some other countries, for the present at least, but there will be those "whose mothers are dead or insane, feebleminded, tubercular or incorrigibly vicious" that will need provision by the state. One of Dr. Hart's "don'ts" is, "Don't build soldiers' orphans' homes." Nine northern states, he says, did just that thing after the 'Civil War. A very large expense was involved, the children were retained for many years, and the training given them was hardly ever adequate.

South Carolina happens to be exceptionally well supplied with orphanages. There are two accepted methods, Dr. Hart points out, of caring for dependent children-the institutional method, and the placing-out method of putting chil-dren in approved family homes. The latter being now regarded as preferable, and favored by the Red Cross, Dr. Hart urges a strengthening of the South Carolina Children's Home Society, which is a placing-out agency, and a general extension of the placing-out method throughout the state. Since this is desirable for the orphans of soldiers, it is also desirable for other dependent children, and so by devising a program to meet her war needs, South Carolina will be devising a program to meet her normal needs for many years hereafter.

This is only one illustration. Another "don't" is, "Don't build homes for invalid soldiers." The inmates of these homes have generally been idle and dis-contented. "They have had too much to eat and too little to do." Instead, Dr. Hart strongly urges the establishment of district hospitals. There will be "multitudes" of soldiers who will come back convalescent from disease or broken in health, requiring hospital care or a period of restoration in a convalescent home. South Carolina is now deficient in hospital accommodation. By building a number of district hospitals in rural as well as in urban communities, and making them available for all citizens at moderate rates, she will not only be providing in the best possible way for returned soldiers, but will also be adding to the needed hospital accommodation for civilians.

Dr. Hart's recommendations go into the correctional field, the care of insane and tubercular patients, education, the care of the feebleminded and the uniform government of state institutions. Seventy-five "chain gangs" of prisoners have been building and repairing roads in the state for years. This has not

Valasch in Chicago Herald

A NEEDED SHELTER

been an economical procedure, quite apart from humanitarian objections to it as a reformative process. If the two state farms can have able-bodied men. says Dr. Hart, and can pay them ordinary wages, they can increase their production at least 50 per cent. In other words, prisoners can "help win the war."

South Carolina is to be congratulated, says Dr. Hart, upon what she has already done to meet the demands created by the war. This is an example of what can be done "in the strenuous days of struggle and self-denial which are before us."

# THE MERIT SYSTEM AGAIN FINDS A LIBRARIAN

HE merit test of the civil service law has scored success a second time in the selection of a librarian for the Chicago Public Library. Nine years ago it was applied for the first time to fill such a position. So doubtful were library officials of this method of procedure that it was difficult to persuade three eminent librarians to act as an examining committee for the Chicago Civil Service Commission, They were secured at length, and the competition was thrown open to the whole country. At the head of the list of nearly a score of competitors stood Henry E. Legler, then at the head of the Wisconsin Library Commission. His selection not only saved the library from the probability of a political appointment, but placed at its head the man in all the country best fitted, it is now conceded, to increase its circulation (from 1,500,000 to 6,000,000 volumes annually), to extend its branches and outlying stations and to unify, inspire and lead its staff through a progressive administration

Mr. Legler's recent death was the signal for another attempt to secure the position as a perquisite of the mayor's appointing power. His own corporation counsel reasserted the authority of the civil service law. Even then the result was considered doubtful, because two of the three examiners were known to be entirely unfamiliar with the requirements and exactions of the position. Hope was held that the third examiner, Herbert L. Putnam, librarian of Congress, who also had served on the previous examining committee, would assure a satisfactory result, if enough applicants of caliber and experience would take the examination. Twelve candidates applied, six of whom failed to secure standing sufficient to be included in the eligible list.

At the head of the list of the six eligibles stood Carl B. Roden, with a grade of 92.50. In the previous examination, he stood next to Mr. Legler, and he has since served as assistant librarian. For thirty-two years, since he started as page when a lad of fifteen, Mr. Roden

has been continuously in the library's service. To the use he has made of the library he attributes his promotion from one position to another, and his choice as librarian. Not only has he the most thorough acquaintance with the contents of the library and all its operations, but he is recognized to be widely versed in the history of literature. He also studied law and has been admitted to the bar. Thoroughly de-voted to the policy and to be credited with the success of the Legler administration next to Mr. Legler himself, Mr. Roden's appointment is greeted with great satisfaction, and the success of his management is considered to be assured in advance.

#### SICK SOLDIERS PRISONERS IN SWITZERLAND

INCREASING numbers of American soldiers will find their way into German prison camps. The world has owne, not without reason, to regard military prisons as the last word in brutality and sordidness; Dante's inferno could have been little worse than some of those authentically described to us, and although the present war has seen a great improvement in such matters, unusual interest attaches to a humanitarian program worked out in Switzerland for the interment of prisoners of war—a program new in the history of nations and effectually making that country into an international "warder" for the belligerent troops.

Immediately after the outbreak of hostilities Switzerland foresaw that many troops would be thrown on her soil. Their internment became inevitable. The custom of interning belligerents who entered neutral countries was not new. Neither was there anything new in the principle of the neutral country caring for sick and wounded among troops interned on her territory. Internment, by agreement of belligerents, of prisoners of war removed for the purpose from the fighting countries, was, however, an entirely new practice in international law.

The first step in this direction was taken when France and Germany agreed early in the present war to exchange through Switzerland prisoners of war so seriously wounded as to be unfit for further military service. From March, 1915, to November, 1916, over 11,000 soldiers of these two countries crossed Switzerland to their respective native lands.

Even before the actual transportation of these men had begun, the new idea of providing for the wounded prisoners of those totally incapacitated had spring up. It was proposed that such prisoners be interned in Switzerland for the period of the war and there be afforded medical attention and opportunity to re-

cuperate. What guarantee, it was asked, would the country that had captured the prisoner have that, once in Switzerland, he would not at the first opportunity escape to his own country? This perplexing question was finally settled by the belligerent countries promising to return to Switzerland all those who had escaped from intermment!

This plan has been put into effect. How it has worked is described in a report by the recent Swiss Commission to the United States, published in English by the Columbia University Press [Bulletin of Social Legislation, No. 5, edited by Samuel McCune Lindsay] and being distributed by the National Committee on Prisons and Prison Labor. The report tells how the first experiment was made in January, 1916, when

"FREE BELGIUM," an aching little strip of land thirty-five miles by fifteen in size, every foot of it still exposed to fire, makes up nominally the field of the new Red Cross Commission to Belgiumnow raised to full rank with the commissions to France and to Italy. but hitherto only a department of the larger undertaking. Ernest P. Bicknell is commissioner, But, however small geographically, Belgium is great in misery. It counts, too, large numbers of refugees sheltered in France, and it represents. perhaps more-certainly longerthan any other relief field, the set purpose of the American people to bring succor to the victims of war. This fourth year of the war in Belgium, and the relief work done under Mr. Bicknell, give the text for the next Red Cross articles by Paul U. Kellogg in early issues of the SURVEY.

100 French and 100 German prisoners suffering from tuberculosis were interned. At once it beame apparent that if the plan worked successfully, Switzerland would be faced with an enormous problem of organization. The second experiment was made in February, when interned prisoners requiring surgical care were included with the tubercular patients. Within six days of the second experiment over 1,200 French and Gernan prisoners, including both officers and soldiers, were interned.

At first it was thought that only a few classes of prisoners could be interned. The list of diseases and wounds giving the right to internment has since been increased to eighteen, however. These include all serious nervous or mental affections requiring treatment in special establishments (these cases to be sent back to their own countries); chronic alcoholism; all contagious diseases during the period of infection. Itinerant commissions of Swiss doctors go to the belligerent countries to pick out those eligible for internment.

The interned are quartered in hotels, boarding-houses, sanitariums and the like, their quarters in no way resembling hospitals. The rooms are bright and attractive, and can, as a rule, accommodate two, three or at most four occupants. The proprietor of an establishment is paid a fixed sum for their care, six frances per day for an officer, four for a soldier. More is allowed for a tubercular patient. Interned men are considered prisoners and cannot resort to law on civil matters nor engage in ordinary commercial pursuits.

Schools for these interned men have been founded, one such technical school for Germans having twelve teachers and offering courses in algebra, geometry, mechanics, electricity, chemistry, construction and drawing. Since idleness is the bane of prisoners everywhere, work has been declared obligatory for all whose health permits it. The prisoners work in shops, factories, on new buildings and in various sorts of individual labor. Wages are paid, up to a franc a day. Some governments require that a portion of the wages be turned over to them to be used toward the cost of maintaining their prisoners.

The report does not tell how many men are now interned in this fashion in Switzerland. At the end of December, 1916, the surgeon-general of the army estimated that he could quarter 20,000 more than were then interned, without having to construct barracks. It is the hope of the National Committee on Prisons and Prison Labor that captured Americans may enjoy the comparative comfort and freedom of internment by the lakes and peaks of Switzerland.

# THE PRESIDENT AGAINST UNIVERSAL TRAINING

PRESIDENT WILSON has made it clear, according to David Lawrence, the well-informed Washington correspondent of the New York Evening Post, that legislation providing for universal military training of all boys under the age of twenty would be "impracticable" at this time. Organizations such as the National Security League have been conducting a spirited propaganda with the object of securing military training, either now or after the war. Educators have pronounced against it, the superintendents of the country using the word "emphatic" in recording their opposition at their annual meeting in Detroit in 1916. Nevertheless, bills have been introduced in large numbers to secure such training, both in state legislatures and in Con-

But no federal measure will be reported, says Mr. Lawrence, because the President has decided against it. The President's objection is that officers are not available for the purpose, being needed to instruct the army that is to fight Germany. This does not dispose of the argument for post-bellum training. On this the administration's position, says Mr. Lawrence in the Evening Post for March 3, is as follows:

The United States is fighting now to obtain a durable peace, one in which it shall not be necessary to continue the race for armaments, the rivalry in armies as well as navies, something that not only has cost many billions in taxation, but has been held as a fundamental cause of Germany's impulse to make war on the slightest provoca-Of course, if the present war should not bring about a league that can enforce peace and make possible a reduction of armaments, not only would a large part of the army which has been mobilized for the present war have to be retained, but provision made for permanent military service. But the Washington government is going on the assumption that the cause of democracy will triumph, and that large armies and high income taxes will be unnecessary after the peace treaty is signed, and that the subject of war and preparation for it can be safely forgotten because the futility of mili-tarism will have been demonstrated. To argue with the masses of the people that when the present war is over preparation must be begun for another war is viewed here as particularly unwise.

The alleged menace of Japan as an argument for military training, says Mr. Lawrence, is answered by the expectation in Washington that Japan will Join the league of nations and abide by its agreements. Moreover, to harp upon this argument is "very dangerous to good relations." "Japan's statemen," he says, "have in recent years seen the wisdom of playing a large policy in company with Great Britain and France, and they are seeking constantly to promote good relations with the United States, as the Lansing-Ishii agreement indicates."

# "THE REVOLUTION OF THE WORLD"

THE Bolshevik sentuments or Charles M. Schwab (see the Sur-VEY for February 23) seem to have their counterpart in German manufacturing circles. Walther Rathenau, head of the great General Electric Company of Berlin, has written a book on domestic political economy in which, according to the Berlin Tagebalatt, he says:

What we are experiencing is the revolution of the world, the volcanic upheaval of the mighty, burning lower strata of the abode of mankind. It is not taking place in the disorderly form of a mass optising with thought. That would have been of small account and would not have thrown the world from its axis. . . .

In reality, the old economic order is burning down and the time is drawing near when the old foundation of the social order will catch fire. Two pillars of the old order will project from the ruins—the monopoly of the great landed estates and of the mineral treasures. But they will gradually lose, no matter how much their property power may grow at first.

There is a curious analogy also in the attitude of the German majority Socialists and that of the American majority labor leaders to the revolutionary labor philosophy of the Bolsheviki. Eduard Bernstein, for instance, one of the most influential German Socialist leaders, is reported as saying: "Internationally speaking, the policy of the Maximalists can have no other result than to put Russia in a position where she will not be able to say a word of any weight in the decision regarding the nature of the coming general peace."

The newspapers of the German majority Socialists in different cities attempt almost daily demonstrations of their loyalty. Anent the recent strike they are summarized by the FrankJurter Zeitung as saying; "The strike is a demonstration movement, not a revolution movement. The Socialist movement, apart from political objects at home, is intended to promote the cause of peace, to remove obstacles to peace, and to help to produce a clear and uniform policy; it is not intended to risk collapses à la Russia for the sake of theories which were never the theories of the German and Austrian proletariat."

To what extent the leaders really lead and the newspapers, inspired from their central controlling bureau, really express the sentiments of their readers is a question which cannot at present be answered.

# Book Reviews

STATE SANITATION

By George Chandler Whipple. Harvard University Press. Two volumes. 377 and 452 pp. Price \$2.50 each; by mail of Survey \$2.62 each.

The growth and specialization of public health science has rendered in-evitable the transition from a board of health composed of public-spirited physicians and other citizens to a department of health composed of experts, under a single commissioner as executive. The board of health phase of public health will always remain, however, an interesting and important stage in the growth of this governmental agency; and of all boards of health in this country none has perhaps greater claims to our interest and appreciation than the State Board of Health of Massachusetts.

It is most fitting, therefore, that the establishment of the new health department of Massachusetts should be signalized by the publication of a comprehensive and inspiring history of the achievements of its predecessor. Prof. George C. Whipple, of Harvard University and the Massachusetts Institute of Technology, himself a member of the Public Health Council of the new department, has rendered a real service to all who are interested in the progress of health science by collecting the material for these three volumes of State Sanitation.

The first volume of the series includes Professor Whipple's review of the history of the Massachusetts State Board of Health from 1869 to 1916, and a reprint of the report of the Massachusetts Sanitary Commission of 1850. The second volume is made up of reprints of thirty-four articles selected from the annual reports of the State Board of Health and its monthly bulletins which, as Professor Whipple rightly says, may be termed classics of American sanitation. In this volume there is also to be found a bibliographical index, in the form of very brief abstracts, of all the scientific articles and reports published between 1870 and 1914, arranged in chronological order. The third volume, which has not yet appeared, will be devoted to an index guide to the various sections of the forty-six annual reports of the Massachusetts State Board of Health, arranged by subjects, and to a series of biographical sketches of the experts connected with the work of the board.

The portion of this work which will most interest those readers of the SUR-NES who are not professional sanitarians is the report of the Massachusetts Sanitary Commission of 1850, a really extraordinary document worthy to rank with the reports which Chadwick and Simon were preparing in England at the same time. The chairman of the committee, Lemuel Shattuck, like Edwin Chadwick himself, was not a physician but approached the subject from the standpoint of the social reformer, and the scope of his report displays such foresight and vision as to awaken admiration even at the present day.

This report of sixty-seven years ago urged that statistics of occupational diseases should be collected; that school houses, churches and other public buildings should be adequately heated and ventilated; that sanitary surveys should be made of particular cities, towns and

other localities; that measures should be taken "to prevent or mitigate the sanitary evils arising from the use of intoxicating drinks and from haunts of dissipation;" that the authority "now vested in justices of the peace relating to insane and idiotic persons not arrested or indicted for crime" should be transferred to the local board of health; that encouragement should be given to emigrate from places in the state where there was little demand for labor to other places, and associations formed among the emigrants for settling on the public lands of the United States: that efforts should be made "by all proper means to elevate the sanitary and social condition of foreigners and to promote among them habits of cleanliness and better modes of life;" that a sanitary association should be formed in every city and town for the purpose of collecting and diffusing information relating to public and personal health; that tenements should be provided for the better accommodation of the poor; that public bathing houses and wash houses should be established; that institutions "to educate and qualify females to be nurses of the sick" should be founded; that persons should be specially trained in sanitary science "as preventive advisers as well as curative advisers:" that clergymen of all religious denominations should make public health the subject of one or more discourses annually before their congregations; that every family should "keep such records as will show the physical and sanitary condition of its members:" and that individuals should "make frequent sanitary examinations of themselves and endeavor to promote personal health and prevent personal disease."

All of which serves to remind us that the ideals of public health as they could be outlined in 1850 have not as yet been fully realized.

C.-E. A. WINSLOW.

New York CHARITIES DIRECTORY FOR 1918. By Lina D. Miller. Charity Organization Society, New York city. 472 pp. Price \$1; by mail of the SURVEY \$1.10.

War Relief and War Service do not appear in their proper alphabetical place in the subject index. That is the only fault we can find with this admirable directory. The former of the two sections named has grown to three times last year's size; the latter is entirely new; and both are indispensable to any conscientious philanthropist who would attempt to wend his way among the riot of appeals.

Of course, just now the status and character of social agencies is in an abnormal flux, and many entries may be out of date before the next edition; but after all the changes will only affect a small proportion of the agencies and persons listed. Compared with last

4

year's directory, the remarkable thing is the continuity of the work as a whole in spite of war conditions rather than the changes which have taken place.

The directory will be useful outside the city chiefly because of its carefully compiled information on national agencies which have their seat in it.

THE GREAT PROBLEMS OF BRITISH STATES-MANSHIP By J. Ellis Barker. 445 pp. E. P. Duton and Company. Price \$4; by mail of the SURVEY, \$4.20.

Comparative international statistics of Mr. Barker. He has used them many years to bolster up weak arguments for "tariff reform," so-called, and has more than once been shown up as unscrupulous in his use of them. To the unimitated nothing appears more convincing than a few figures taken from official or semi-official sources and tell-ingly presented. But the student knows how very misleading tables constructed from such material can be and how apt to be misused by the partisan.

In the present volume, Mr. Barker with great modesty disclaims all intention to give opinions of his own; his book is offered the reader as "storehouse of facts." The author must forgive us if we are a little skeptical about his facts, considering his reputation, more especially since, his disclaimer notwithstanding, the crudest views and judgments abound in every chapter. Like many publicists of his type, he has no words too hard for the party politician; yet his own work is a long string of party arguments in disguise. In order to make his point, or rather

to insinuate it, the author must needs repeat his often disproved statement that "in the United States wages are from two to three times as high as in this country (Great Britain), and goods are very little dearer." Free trade, we are told, has been advocated by both parties in England for decades "chiefly because that policy furnished an excellent party cry."

The bete noir of Mr. Barker is democracy. He can find no use for it; for it does not add to the wealth of the nation as by him understood. The most glorious period of English history to him is that which followed the Napoleonic wars, when production increased by leaps and bounds, and the masses, held down by oppressive taxation and grin poverty, did not interfere with the patriotic exertions of the leaders of industry. More than once Mr. Barker assures us that "the greatest civilizing factor is the tax collector,"

It offends the author's patriotism to see workingmen buy pianos and their wives dressed in silk. Trade unions, whether in his own country or in Germany, are the enemies of progress and should be suppressed. "Their activity has upon the body economic an influence similar to a slow fever which leads, almost imperceptively to atrophy, to marasmus, and to death." All true democracies "have been short-lived," and, by implication, a militarist-oligarchical state, by preference a monarchy with a council of not more than four ministers directly responsible to the monarch, is the ideal state to aim for in the interests of "national wealth."

Mr. Barker's views—or statements of faet, as no doubt he would say—on questions of international polity are no less crude. His viewpoint is invariably that of the great power with persistent and complete lack of sympathy for the problems or interests of the smaller peoples. He graciously bestows Silesia and South Germany upon Austria; for, with this large addition of German population to the Austro-Hungarian empire, "the 7,000,000 or 8,000,000 Magyars would no longer prove umanageable."

would no longer prove unmanageable."
Asia Minor is nothing more or less
than "a natural fortress" and, as such,
should, of course, be utilized for the
defense of the British empire and its
route to India. Poland, with one stroke
of the pen, is deprived of a national
history; its future use is that of conveniently serving as a buffer state between Russia and Germany. But since
"they are proud of their big brother,"
Russia, the Pofes will no doubt abstain
from any excessive desire of independence which might be inconvenient to
their big cousins.

"Men wishing for liberty may henceforth rather go to the British empire than to the United States." But do not let us be disheartened. "The arguments in favor of an Anglo-American reunion are overwhelming. A large and constantly growing number of them [Americans] have begun to recognize that at the time of the American Revolution not all the wrong was on the side of England . . and therefore they feel a little ashamed of the patriotic exuberance of some of their countrymen."

Such are the dreams of our matterof-fact statistician-in-chief of the protectionist—imperialistic wing of the Tory party. Let us be thankful that, as he so well says, "government, rightly considered, is not a pastime, but a business."

BRUNO LASKER.

TEPPE Neighbors

By Grace Coolidge. The Four Seas Company. 225 pp. Price \$1.50; by mail of Survey \$1.60.

The American people have never, as a whole, been sufficiently interested in the American Indian to adopt an aggressive campaign for his general betterment. Statistics, either presented on paper or from the platform, have not aroused them to action. That hundreds

of Indians annually die of starvation in the United States is neither generally known nor appreciated. That the Indian lives under conditions which tend to his extermination, and that these conditions are largely the effects of an antiquated reservation policy can no longer be doubted.

Means of developing the initiative and independent judgment of the Indian are neglected, and his schooling consists of sufficient training to make him a servant of the white man but generally to unfit him for the reservation life which he must afterwards live. He is frequently a victim of injustice at the hands of government agents, the object of contempt of white neighbors, and he, the real native American, does not possess the inherent rights of citizenship. These and numerous other disadvantages which have practically emasculated him, have been problems with which the Indian Bureau, operating under laws which are largely responsible for its shortcomings, has been unable to overcome

That there is more of preventable suffering, sordidness, and hopelessness in the life of the American Indian than there is of encouragement or hopefulness, is fully set forth by Grace Coolidge in her little book of tales. Told in short-story form, they are facts of Indian life, presented in a clear and forceful manner.

The author herself is married to a distinguished full-blooded Arapahoe, and her years of life on a Wyoming reservation and her untiring efforts in behalf of the Indian have placed her in the ranks of those who write with authority, and from the Indian viewpoint, on the sub-

Her tales, into which the philosophy of the Indian is subtly woven, convert one to her own belief that through apathy, unappreciation and lack of foresight in rejecting the Indian, the American people have forfeited an ingredient which would have greatly enriched their national life.

AGNES BRUNDIN.

IN THE WAKE OF WAR

By Harold Hodge. John Lane Co. 225 pages. Price \$1.50; by mail of the Sur-VEY \$1.62

Those who imagine that the same currents of thought are running in political channels throughout the allied nations in Europe and in America will find this book some shock. It plans to restore the English king to some measure of real power and to place the supreme government of the British empire in a council that he shall nominate himself! Such matters as navy, army, administration of India and the crown colonies, and foreign affairs are to be in the hands of five inhabitants of the British Isles. one Australian, one New Zealander, one South African, one Newfoundlander and one Canadian-none elected, but all chosen by the sovereign, who is to have the luxury of ignoring the advice of his ministers.

Democracy is to be placated by the inclusion of a trade unionist and by the annual budget and chief decisions of the council being submitted to a referendum of all white British subjects. The parliaments in Loudon, Ottawa and elsewhere will be required to raise money for the council, but will have no voice whatever in spending it. Local affairs will provide them with ample employment. The writer, who was formerly editor of the Saturday Review, represents the best type of English conservative, nauseated with the party system, genuinely enthusiastic over kings and aristocracies, coupling Little Englanders, pacifists and internationalists in a common damnation. He certainly elicits the respect of his readers, whatever their judgment as to the practicability of his plans. The whole work undoubtedly represents rather the English than the dominion point of view: it does not even discuss the possibility of the empire having any other capital than London. In the first few pages it cautiously questions the proposition that it will be a new world after the war. "The tendency when stress is passed to relapse into the old ways is very strong." Exceedingly interesting is the criticism of party politicians of the old English kind. As they are not susceptible of reform they must be reduced to comparative harmlessness.

IAN C. HANNAH.

RE-EDUCATION By George Edward Barton, Houghton Mifflin Co. 119 pp. Price \$1; by mail of the SURVEY \$1.08.

The last sentence in this book should be read first: ". . . the author who, during the ten or twelve years of hospital and convalescent life necessary for the overcoming of four attacks of tuberculosis, four surgical operations, including an exploratory laparotomy and an amputation, morphinism, hysteria, gangrene and paralysis, has studied the relation of the sick man to society, and who now offers this little book as one of the results of his disability.'

His book is not "an analysis of the institutional system of the United States"; it is a passionate comment on some phases of the system, viewed from the angle Mr. Barton himself indicates. It is a plea for what the author has come to accept during his years of disability-as an ideal to be realized, energized, made actual upon earth-a plea supported in word and action with every gram of strength of an unconquerable will. Give the handicapped a suitable training, he cries. Let them live while they are alive, and earn and have; they deserve something better than the scrap-

It is the personal background and the vivid plea that give this book its value. Apart from these, one confesses perforce that the ideas are not new; the argument not built upon all the facts available, not in line with well-defined tendencies in institutional development. For example, Mr. Barton pictures the tremendous size of our institutions and intimates that they are constantly growing and growing. He suggests that ultimately they will be so large as to be unsupportable by society and that they will topple over with a heavy crash upon the normal and producing part of the population.

But possible sources of income for support of these institutions are not exhausted. Income taxes and inheritance taxes alone are sufficient illustrations of this. Deeper is the criticism that Mr. Barton fails to see that both logic and present trend in social progress stress the prevention of that state of affairs calling for the continuance of huge institutions. The prevention of crime, the prevention of sickness, the prevention of blindness, deafness and of cripples, the prevention of dependence and pauperism. the prevention of feeblemindedness and insanity, are more intelligent measures to combat institutional growth than the reeducation of persons who have already become sick, feebleminded and dependent. Undoubtedly preventive measures have not yet been so notably successful as they ought to be or as they will be. They cost money, too, more money per capita than has hitherto been made available, for the purpose has not been understood.

That the idea of education, moreover, is not a novelty is evident from such experiences as those at Arequipa Sanitarium, the brilliant work with soldiers abroad, and other recently organized work. But it is unprofitable to destroy. There is value in this book. It is documentary evidence of what a handicapped man can do, presupposing the will to do. G. S.

COMMUNICATIONS

# PANS FOR DILUTED FLOURS

[By Telegraph]

TO THE EDITOR: Please print the following food item this week: Social agencies in touch with South Italians and Sicilians must see that they are equipped with pans for bread-making in order to use the substitute flours successfully. Sicilians in the anthracite region are accustomed to raise stiff yeast bread of wheat on a board or cloth and throw it into a clean oven when sufficiently light. The dough, using part wheat substitutes, will not stand this be-

## WHERE IS J. B. NOW?

TO THE EDITOR: John Barleycorn and Uncle Sam are in a death grapple and no one is betting on John. On January 1, ratification of the constitutional prohibition amendment began to come before the legislatures meeting this year (11 in number, besides those meeting in extra session). Mississippi was the first to ratify, followed by Virginia, Ken-tucky, South Carolina, North Dakota, Montana, Maryland and Texas. Of these, three were wet states, and Texas, being the fifth most populous state in the union, breaks down the mere theory that thirty-six states containing about 40,000,000 of the people might force prohibition on the twelve larger states containing over 50,000,000 of the population (census 1910).

Now the object of the liquor dealers—the only strategy there is left them—is delay, in the hope that "something will turn up." One brewers' journal holds out the hope that if only they can delay ratifications till our troops come back from France, "probbition will be knocked into a cocked hat" by our wine-and beer-drinking army abroad.

The referendium is the delay measure. Let the amendment go to the people next year to be voted on and then back to the legislature to be voted on over again. Now, a real referendum this is not, because a real referendum is initiated by the people, voted on by them, and their vote settles the question. But the constitution says that a constitutional amendment must be settled by the legislatures, so this referendum wanted

by the liquor dealers would be only a straw vote, settling nothing, and while it was being taken the liquor men could go out and elect a hostile legislature.

New Jersey has turned down the referendum but may delay a vote on ratification till next year. In Rhode Island, 60,000 women asked their legislature to ratify. It was a monster number for so small a state, and if the women had had state suffrage they would probably have put ratification across. Unfortunately they have only presidential suffrage, so their state-house friends did not need to heed them.

In Massachusetts, a big fight is on against the referendum and for immediate ratification. The writer is from Massachusetts, and as she has gone through the country on prohibition bent, she has had to hang her head in shame because her state has persistently hung like a millstone around the neck of this great reform. In Kansas they said to her: "That old soak, Massachusetts, we don't expect her to ratify." But I think "that old soak" is going to ratify.

New York state is a question with all the big "QS" that can be mustered. The liquor dealers tried for the referendum, but the governor, who has the virility to be dry, said he would veto it. Foiled there, the liquor interests now say that New York must go dry herself as a state before it is proper for her legislature to ratify. This bill has been introduced. It would delay a legislative vote on ratification for three years.

New York is an odd proposition. It is so big that its thinking becomes provincial. Twenty-seven states go dry, and New York hardly knows that every state isn't wet like herself. But once you get an idea imported into New York, it moves fast, for the composite mind of New York today are near prohibition, but uninformed; they wring their hands for answers to objections, such as "Why not get rid of distilled liquor only," etc. For them the writer has prepared an envelope filler—When They Say This, Answer Thus—When They Say This, Answer Thus—

containing all the answers. (A copy may be had from Miss Potter, Anti-Saloon League, 156 Fifth avenue, New York city.)

In Congress, war prohibition is pending. A petition signed by representatives of 5,000,000 women has asked the President to shut off the coal, food, transportation and labor waste of beer— —the National Federation of Women's Clubs is represented, several Councils of National Defense, D. A. R.'s, etc., etc. If the women throughout the land had the vote, the petition would stagger Congress.

But twice this Congress, in one way or another, has torpedoed war prohibition. They undoubtedly have a torpedoready to throw now, but if enough people want war prohibition and make their want known, the torpedo will not be thrown.

From the speech made by Samuel Gompers at Albany against ratification I should guess that he had that little torpedo right on his desk, I should surmise that the whole eastern democracy, always wet, placed it there-brewers, distillers, and wets in general-sometimes Republican as well as Democratic. The southern and western Democrats. who are of quite a different caliber, look sadly at the torpedo. They don't believe labor will revolt if you take away its beer; only the money of the brewers will turn a hair, in their opinion. And to keep schools closed and potatoes rotting that the brewers may thrive goes against their grain. The President, perhaps, coming from New Jersey as he does, sees in a brewer the natural course of human events. It might be different had he come from Kansas,

In the meantime, the National Retail Liquor Dealers' Association (February, 16) has passed a resolution tending sincere thanks to Mr. Gompers for doing his level best to ward off war prohibition in Congress!

ELIZABETH TILTON.

Cambridge, Mass.

#### SAID OF THE SURVEY

To THE EDITOR: I can assure you that I have obtained much useful knowledge, and a much broader viewpoint of the field of social service, from the reading of your excellent periodical. I am confident that it was the SURVEY that was the greatest factor in making my study of the subject of applied sociology one of the most successful and interesting courses that I have so far followed at the university. For it supplied that which we could not acquire in the classroom, namely, a deeper and more extensive idea of modern social service, especially of the great rebuilding of humanity on the war-torn fields of Europe.

This term I am again enlisted in the

class in applied sociology, for I feel that sociology is, and ought to be, the basis of modern education. Again, with the rest of the class, I am taking advantage of your most generous offer of reduced subscription rates to university and college students.

J. T. McMenamin. Stanford University, Cal.

# SEATTLE NEWSBOYS

To THE EDITOR: Your issue of November 10 contained a review of my recent publication entitled Newsboy Service. It was signed by Helen Dwight.

Certain statements in the review attracted my attention, but because of their obvious inaccuracies it did not seem necessary to reply. Since that date, however, I have received a number of letters from those who have read both the book and the review urging me to reply. Recently two letters have come calling my attention to the injustice of the reviewer's statement relative to retardation in Seattle as compared with other cities mentioned. The monograph states very definitely that certain differences in dates and data must be considered if such comparisons are to be valid. It is unfair to permit a partial truth to circulate uncontradicted in a publication as widely read as is the SURVEY. The author's qualification should be read in connection with the unqualified statement of the reviewer.

May I call attention to a few other points, quoting from the review?

"Her book is valuable as a minute study which attempts to be 'fair to the newsboy." Possibly a second reading of the author's preface in which the point of view of the author is discussed would reveal the true object of the book.

"It is weak insofar as it draws general conclusions from conditions in a single city." There are no general conclusions in this monograph. The facts are facts relative to Seattle newsboys and the conclusions are conclusions relative to the same boys in the same city. There is a possibility that "conclusions" which begin on page 153 may have been accepted by the reviewer as general. To assume that they have been so accepted would be to assume that she had not read the conclusions. Scientific procedure requires that conclusions be drawn from material presented. My evidence is Seattle evidence. I make no attempt to establish facts relative to other cities. This is stated over and over again in the context.

The general conclusion idea of the reviewer is further emphasized in, "These are but isolated instances of the facts which make us believe it unsafe to consider the condition of Seattle newsboys typical of the whole newsboy world." The monograph was not intended to be typical of the whole newsboy world.

# New Importations of Embroidery at McCutcheon's

# James McCutcheon & Co.

Fifth Avenue, 34th and 33d Streets, New York

The dedicatory page states that it is a Scattle study made by Scattle people. The prefatory note mentions the study as having been made for Scattle. The author's preface states that it is "the first occupational study for Scattle." And on page I the monograph proper opens with the word Scattle.

I would not take exception to, "Indeed the great defect of Mrs. Reed's book is that its title, Newsboy Service, leads one to a false impression of its universality." This is a matter of personal opinion. I did not when it was

chosen, and I do not now, consider the title a defect, but considerable of an asset. There are, undoubtedly, defects, I know of some myself, but I would not consider the title the "great defect." My own point of view regarding the title was, and is, that one who looks beyond the cover will at once lose any false yound the cover will at once lose any false impression regarding the field included. If one reads no further than the cover the impression, if there were any, would be nothing more nor less than that newsboys were being studied by someone somewhere. It might call attention for

the first time to the fact that such service in the title reader's own city existed and might be worthy of study. Here and there a casual title reader might be sufficiently interested to look within, whereas if he thought of the problem as peculiar to Seattle he might never give it a second thought,

Where does the monograph create an impression that Washington has no law which relates to street trades and that boys are legally on the city streets after 9 P. M.? The facts regarding the laws of Washington are given in the author's preface. They are self-explanatory. So also are pages 24, 26 and 112. child-labor law does not include street trades. The juvenile court law and the law which prohibits boys under twelve from being on the streets after nine o'clock are mentioned on the pages indicated. The author's point of view regarding street sales for the very young might easily be inferred from page 57. The fact that I express no personal opinion regarding a new street trade law does not indicate that I am either disinterested or satisfied with the old, but rather that the expression of personal opinions does not appeal to me as the purpose of scientific monographs. I am attempting to offer facts relative to Seattle newsboys, irrespective of whether they do or do not coincide with my personal views on newsboy service.

"Yet she admits that most of the newsboys are twelve or under." Nowhere in the entire publication can I find any such admission. On page 23 there is complete statistical tabulation of ages which shows plainly that less than 50 per cent of the boys are twelve or under. This is doubtless enough, but I would

hardly call it most.

I am pleased to note that the reviewer has observed my hesitancy to draw conclusions from insufficient data and to question the validity of a certain class of conclusions based on personal opinions. This was the first principle of research which I was taught in my student days, and I have tried to observe it as faithfully as my abilities permit for twenty years. Sometimes I have failed. I shall doubtless fail again, but it will not be because I do not know the danger of substituting opinions for facts. ANNA Y. REED.

Seattle.

TO THE EDITOR: Without a copy of Newsboy Service at hand, it is difficult to answer Mrs, Reed's objections in detail, but I am glad to do so as specifically as possible, for I still believe, as I did some months ago when the book was fresher in my mind, that there is a "great defect" in it against which the reader should be warned.

The choice of title is at the bottom of the trouble-or better, crystallizes it. I should not have criticized the title-

though I am not one to consider titles small matters-had it not stood for something expressed within the book which does not appear to me quite fair. Mrs. Reed states clearly enough in her preface that the study is of Seattle newsboys. Seattle figures on every page, and not even the most superficial reader could fail to grasp that Seattle conditions are the immediate subject. But Mrs. Reed does not stop at Seattle,

In the preface there is an explicit criticism of the conclusions of other students of the newsboy elsewhere; wherever other cities are compared to Seattle--and incidentally, as to the retardation comparison, although Mrs. Reed does state that a difference in dates affects its validity, she makes the comparison and devotes considerable space to itthis same criticism is apt to crop out; and there is implicit if not explicit in the mere fact of the criticism the suggestion that Mrs. Reed's Seattle conclusions are more nearly right than some other people's elsewhere. That is why the book "is weak insofar as it draws general conclusions from conditions in a single city," and why the term "general" is applicable to Mrs. Reed's conclusions even though outwardly they apply to the particular case of Seattle. If Mrs. Reed is dealing with Seattle alone. the validity of findings in other cities is beside the mark, but if she wishes touse those findings for purposes of comparison, she should not question them until she has more data than appear inthe present volume, and until she studies more thoroughly than she seems tohave done the reports from other localities. She has ignored, for instance, the 1915 reports of enforcing officials in-Baltimore and New York and the 1914-1915 Kansas City report, all of which

contain material that would be most in-

teresting in comparison with her Seattle figures, and are not only more recent and more detailed than the studies she objects to for their generalities, but happen to bear out some of the very conclusions she rejects as based on opinion and not fact.

My criticism of Newsboy Service stated baldly is that for a piece of work laying so much stress on scholarliness and being for the most part so carefully handled, it has unfortunate lapses into unscholarliness when it ventures outside

As to the details of Mrs, Reed's letter, I am sorry that without her book I cannot explain my statements, but in the matter of the Washington laws and street trades I remember that I studied both Mrs. Reed's explanation of the laws in her preface and their text. As she says, the child labor law does not include newsboys, and she is my authority for the statement that the interpretation of the juvenile court law has made it non-operative, at least as regards new-sies. Indeed, Mrs. Reed's analysis of the laws and her description of Seattle conditions, together with her stated belief that small boys should be kept off the streets at night, seem to me to make a strong case for a newsboy law and its strict enforcement in the state of Wash-

# THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

#### KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corresponding officer, etc. [They are arranged alphabetically.]

If you seek an unknown source of information, turn to the subject Index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject classifications, as "HEALTH," printed in conjustal. capitals.]

Correspondence is invited by the agencies listed; questions answered (enelose postage for reply) and pamphlets supplied free or at nomina-charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your community or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

Robert R. Moton, prin.; Warren Logan, treas.; Emmett J. Scott, see'; Tunkegge, Ala.

WOMEN'S EDUCATIONAL AND INDUSTRIAL UNION-Miss Heles N. Henry, exc. secy, 264 Boytston St., Boston. Information regarding women's work, vocational opportunities, social welfer legislesion Mess; practical training in institutional management through industrial departments. Reading lists on women's vocations.

# ON THE WESTERN FRONT

HE first of these pamphlets was gotten out in that little printing shop off the Rue St. Honore to which Ambassador Herrick turned in 1914 when it looked as if Paris would fall into the hands of the invaders. Here he had run off his red, white and blue safety placards for Americans to cost on their house fronts.

Since the United States entered the war, this printing shop has been doing work for the government, for the Red Cross and the Y. M. C. A. with result that it was so overwhelmed in November that it took seven weeks to see this pamphlet through the press.

The last of these pamphlets was published in January at a French printer's. The house had no compositor, pressman or proofreader who knew a word of English, and the text was set up from the manuscript, letter for letter. It had to be proofread six times.

BUT these difficulties were small compared with some of the other hurdles which had to be surmounted. The work was undertaken at a time when there was practically no source material. The first quarterly reports of the Red Cross departments were only taking shape. The main lines of policy in the minds of the executives at headquarters were still in the formative period. Only by sharing in the experience of field agents and joining in exploratory investigations was it possible to give them content. There were wide gaps in such fragmentary publicity as had found its way into the newspapers and even in the things which passed by word of mouth. A work of self-interpretation was needed, and at once.

—FOR the men and women of the organization, brought by every ship reaching France, and dispatched to various parts of the field without time or facilities for knowing what their fellows in other localities and other departments were attempting.

—FOR the editors and government officials and other forces of public opinion in France, into whose domestic housekeeping these friendly newcomers were bringing their stores of good will and organized resourcefulness.

—FOR the leaders of the American expeditionary force, unacquainted with this parallel civilian effort, with the needs that gave it cause and their relation to national resistance.

—FOR the American correspondents in France and the American public at home.

THE pamphlets have gone through several editions abroad, and are being reprinted by the Red Cross at home in addition to their serial publication in the SURVEY. They were not only opportune budgets of information, but helped pool the vision of things striven

Their preparation was the gift of SURYEY ASSO-CIATES to the Red Cross and to the work in hand. It was in line with our wartime service program, given out something less than a year ago, one item in which was to follow this unexampled project of relief and rehabilitation on the western front in much the same way that the engineering journals followed the development of the Panama Canal. The cost in staff time and expenditure to SURYEY ASSOCIATES was roughly but \$3.500. On the basis of work done—as an earnest of work to come—we appeal for the continued backing and support of those who have made the SURYEY possible in the past; to those to whom this work is their first introduction to the SURYEY.

If you think it was worth doing, and would like to see the SURYEY forge ahead as an independent, sympathetic and resourceful medium in these times, join with us by sending your check to help meet the cost. It will free us to go ahead at other distinctive pieces of social interpretation, which will count for as much or more.

# The Child and the Electric Chair

Paul Chapman, Sixteen Years Old, Awaits Execution for "Murder"

By Winthrop D. Lane

BOY sixteen years three and one-half months old has been sentenced to die in the electric chair in New York. He has been legally convicted of murder in the first degree. He comes from good parents, has never been convicted of crime before, and did not intend up to the moment of the act to commit this one.

His name is Paul Chapman. Protests against his being put to death, set for the week of April 1, have already crossed the continent. These protests are not based on any question of guilt or innocence, but on the belief that a boy of his age should not suffer death for one misstep, and on opposition to the legalized savagery that made his sentence possible. The judge had po alternative but to pass the sentence that he did. He was the instrument, not the moderator, of the law.

It is perfectly possible in New York today to electrocute a child of seven years. This can be done in other states as well. In New York all children below that age are declared to be "not capable of committing crime." A child between seven and twele is "presumed" to be incapable of crime, but (Section 817 of the penal law)—"the presumption may be removed by proof that he had sufficient capacity to understand the act or neglect charged against him and to know its urong-fulness." Since the only penalty for murder in the first death, a child between seven and twelve who commits such a murder, and who can be proved to have had sufficient capacity to "understand the act" and to "know its wrong-fulness," can be electrocuted.

A protection is thrown around children who commit lesser offenses by the juvenile delinquency act, pased in 1909. This provides that "a child of more than seven and less than sixteen years of age, who shall commit any act or omission which, if committed by an adult, would be a crime not punishable by death or life imprisonment, shall not be deemed guilty of any crime, but of juvenile delinquency only." Such a child must, if practicable, be tried in a children's court. Even if Paul Chapman had been under sixteen when he committed his offense, he could not have claimed the protection of this act.

The law quoted with respect to presumption of incapacity

is a step backward from the old common law. The common law extended this presumption to the age of fourteen, instead of stopping it at twelve. We are thus still in the days of Lit-tleton and Coke. Those primitive fathers of the law, by whom our present understanding of child behavior and psychology was undreamed, still determine, in part at least, our outlook upon child crime. The law of sales, of torts, of contracts changes with our economic needs, for the leaders of business and finance are interested in changing it, but who is interested in changing the law of crime?

These facts are more important than the Chapman case. That case, however, bids fair to become historic. The attorneys for Chapman declare that there is only one other instance in the history of New York of a boy alleged to sixteen being convicted of murder in the first degree, and in that instance it is probable that the boy was really much older.

The offense of which Paul Chapman was convicted was not the offense that he started out to commit. He started out to commit burglary. Accompanying a nineteen-year-old boy, Hughes Davis, and Davis's brother, he went to an apartmenthouse in Brooklyn for the purpose of burglarizing it. It is the contention of the defense that the two Davis brothers induced Chapman to go with them only a few hours before the offense and when a third member of the party withdrew. They contend also that Hughes Davis was the ringleader of the affair, providing the burglar's kit, two automatic pistols and whatever else was necessary for the crime.

When all three arrived at the house, Hughes stationed his brother in the street as a warcher and took Chapman with him into the yard at the rear of the house. Paul waited in the yard while Davis reconnoitered. Upon investigation, Davis found that there were two men and one woman in the apartment, instead of the man and woman whom he expected to find. He then proposed to Paul that he enter and blackjack the extra man, but to this, says the defense, Paul vigorously objected. Davis thereupon agreed to use no violence and, entering the apartment through a window, began to chloroform the occupants with an atomizer. Paul followed as far as the window, but did not enter. Some movement of

the sleeping man indicated that he might awake, whereupon Davis, says the defense, raised his arm as if to strike. At this first indication of violence, it is claimed, Paul turned and ran, seeking to abandon the whole enterprise. Going downstairs into the basement, he lost his way in the darkness, bumping into ash-cans, gas meters and debris and being unable to find his way out. A moment latter he was joined by Davis, who said nothing had happened, ordered him to throw away his pisted and follow him to the roof. From the roof Davis descended in the dumbwaiter shaft, but this so aroused the people in the house that Paul was afraid to follow.

Paul returned down the main stairs, reaching the street in safety, and boarded a train at the nearest elevated station. He did not go home that night, and next morning was arrested as he approached his house. He did not know that anyone had been shot or hurt. It is the contention of the defense that all the homicides, which included the death of both men and the woman in the apartment, occurred after Paul left the window. Davis was trapped in the dumbwaiter shaft and shot to death by the police.

This story is denied by the prosecution at many points. Chapman, it says, not only accepted an automatic pistol, with a second round of bullets, from Davis, but accepted and wore, also, a pair of rubber gloves to prevent his fingermarks from being left behind. It was Chapman, says the prosecution, who bought the chloroform; he went to four different drug stores to get it. Two of the chambers in his pistol, it claims, were empty, showing that he fired two shots; moreover, since eight bullet holes were found in the bodies and only six chambers were empty in Davis's pistol, his two shots must have taken effect. Each side introduced expert testimony on this point, the two experts substantially contradicting each other on the question whether, in fact, the specific bullet claimed by the prosecution to have come from Chapman's pistol could have done so. The proof is too convincing, the prosecution contends, to admit of any doubt,

Murder in the first degree, under the New York law, is committed whenever, in the attempt to commit a felony, a person kills another person, whether the killing be intentional or not. Chapman was undoubtedly present and participated with Davis in the attempt to commit a felony.

Irrespective of the guilt or innocence of Paul, the question remains: Ought he to be put to death? In answering this question, the law took no cognizance of who he is. It did not ask what kind of boy he has been or what may be expected of him. The main facts in regard to Paul's sixteen years of life seem to be well established. The following statement of them has been supplied to the SURVEY by Matthew W. Wood, his attorney:

Paul Chapman was born in Chicago, Ill., on October 19, 1901. He was thus sixteen years and ten days old on the night of the erime. He comes from good parentage, his father having held a responsible position with the Grand Trunk Railway in Chicago. Unfortunately, the father deld from tuberculosis when Paul was less than three years old. This left the mosher with two children, Paul and a brother five years older than himself, to support.

The family moved to Brooklyn, New York, shortly after the death of the father. Although the latter had left \$5,000 in life insurance, this did not assure permanent support and the mother sought and secured work. Her earnings never quite made both ends meet and the life insurance money was gradually used up.

Paul attended public schools in Brooklyn continuously from 1908 to October, 1916, his progression being regular. When he left he was in the 1-A grade, next to the graduating class. He attended, in all, four different schools, and at the trial at least two teachers from each of these testified to his good deportment and standing. From each of these testified to his good deportment and standing. From 1910 to 1912 he was choirlowy in St. Ann't Church, Brooklyn, from from 1912 to 1915 choirlowy in St. Bartholomew's Church. Change of two exceptible him to [eaze the latter. At the trial the choir-ratial the choir-ratialy choir-ratial the choir-ratial the choir-ratial the choir-ratial

of St. Ann's swore that he was far above the average in courtesy and gentlemanly conduct,

At about this time his mother married again. Whether the presence of a stepfasher in the house irristed Paul is not known, though he did not complain and his stepfasher was always kind. Certain is devent may have contributed to his longing for a change of secue. the death of his brother in September, 1916, from the same disease that had claimed his faiber. He left home in Deermber, 1916, which was the world. His departure caused no extrangement conditions and the same disease conditions and the same disease that had claimed his faiber. He left home in Deermber, 1916, to make his way in the world. His departure caused no extrangement conditions and the same disease that the

Paul's first idea was to get work in a munitions factory in Bridgeport, Com., but he found that city "foo tough," as he wrote to his mother, and left a few hours after arriving. He then went to Philadelphia and five days after leaving home was able to samounce that he had secured work with the Adams Express Company at \$7 a week. "I just about make both ends meet." he worte to his mother

Paul did not work long for the Adams Express Company, and his next job was at one of the du Pont powder mills in New Jersey. There he worked until the following June, finally leaving because he would have had to swear falsely to his age in order to stay; he had secured work in the first instance because he looked much older than he was: standing five feet ten and one-half inches in height and weighing 150 pounds. He next went to Camp Meade, Annapolis Junetion, Md., and later to Akron, O, returning home (teother 15, 1917. It was during these nine months that Paul was away that, it is claimed, he changed into a "hold" boy. The record of himself, as set

It was during these nine months that Paul was away that, it is claimed, he changed into a "bad" boy. The record of himself, as set down in the letters to his mother, written oftener than once a week, do not bear out any such change. Fifty-two of these letters are now in his attorney's hands. In them he frequently urges his mother not send him money, assing he does not need it. On her birthday he sent her \$3. The letters are full of solicitous affection and healthy boyish prattle.

Homeischens caused his return. He reached Brooklyn October IJ, two weeks prior to the murder. Being without money and his clothes being ragged, he did not go home for several days. While looking for work he again met Hughes Davis, whom he had known at school, and who was the originator of the enterprise that proved his underige. Paul's entry into that aftair was undoubtedly the desire to secure some money. When he did go home, four or five days after exerting, he put his head on his mother's shoulder and wept and wept. Paul Chapman has no criminal entere. He had never before been desired to the state of the desire to d

The facts here set forth have no relation to the naked, legal act of which Paul Chapman has been convicted. They have every relation to the kind of boy he is and to the form his punishment should take. Rounded out and filled in, with his capacities and talents shown, his intelligence gauged, his weaknesses discovered and his health noted-with the whole boy studied-they constitute the basis and the sole legitimate basis of treatment. They are the diagnosis of his case. It is such facts as these that modern penology is coming more and more to admit into the harsh sanctuary of its purpose; both our law and our courts will some day have to take full cognizance of them. Yet they are the facts that one of the district attorneys who prosecuted Chapman dismisses as "sentimental dribble." They have "nothing to do with the case." Chapman, according to this attorney, has a "crooked heart;" the facts "crucify him." These words of the district attorney were not uttered in a court of law, to secure a conviction, as part of a day's work. They were spoken to the writer. The attorney did add, however, that if any reason existed for "bestowing clemency," it was Chapman's age,

The appeal taken in Chapman's behalf operates as a stay of execution. He will not be electrocuted until the Court of Appeals has reviewed his case; this is not likely to happen for some weeks. If a new trial is not ordered, Governor Whitman must decide his fate.

Pressure from one strange source has already been brought to bear on the governor. A few weeks ago, while he was stopping at the Blackstone Hotel, in Chicago, a troop of twenty boys descended upon the hotel and demanded to se him. The clerk asked them if they had an appointment. They said no. The clerk said that the governor could be seen only by appointment. The boys asked that word be sent to him that twenty members of the Boys' Brotherhood Republic were below and wanted to see him. The governor asked them to come up. For some minutes he listened in surprise to the pleas of their spokesman for mercy for Paul Chapman. The motto of this republic is, "When a kid's in trouble, we're in trouble." These members of it had come to plead for a boy of their own age who was "in trouble." Before they left, Governor Whitman had promised to remember their words whenever the case came before him.

Later the "city clerk" of the republic put the boys' ideas into a letter to Spencer Miller, Jr., who was formerly attached to the staff of Thomas Mott Osborne at Sing Sing. Part of that letter follows:

DEAR MR. MILLER:

Our plea was just a human plea made by boys for a boy in trouble. . . . We are interested in Chapman because the boys of Chicago feel that a boy of his age should live in spite of his mis-step. If the state of New York will allow this boy to be killed, the boys of Illinois will charge your state with murder.

Your governor promised us that he would remember our plea whenever the case shall some before him; he started that we we justified in our request for mercy. Your governor will keep his promise. You must save this boy. Here in Chicago no such sentence would ever be given to a boy of Chapman's age. What is the matter with New York? Why do the boys of New York Miss such tactica? Is there no man in New York like Jack Robbins to guide them?

If there is anything the 273 boys of the Boys' Brotherhood Republic can do to save the life of Chapman, let us know at once.

Whatever happens to Paul Chapman, now in Sing Sing's death house, the law, unless changed, will still hold in store for other sixten-year-old "boy murderers" the same treatment that it has set out to give him. A movement to change the law is already on foot, an assemblyman from Chapman's home borough having introduced a measure to make the penalty for murder in the first degree, when committed by a person under twenty-one years of age, imprisonment only; the maximum term is fixed at life in this measure, the minimum at twenty years. Meanwhile, not only in New York, but in other states, society must answer the question whether it wants its laws to continue to regard children as eligible for the electric chair.

# Medical Social Service in a Disaster

# An Interpretation of the Reports of Some Red Cross Workers in the Great Halifax Explosion

By Michael M. Davis, Jr.

ARELY twelve years ago medical social service began in the hospitals of the United States, under Dr. Richard C. Cabot at the Massachusetts General vigorously, and by persistent endeavor secured admission to over three hundred hospitals and dispensaries of the country. It has become recognized as an essential adjunct of modern

But medical social service has often been thought of only as a pleasant supplement to medical and nursing service. Through the Halifax disaster it has shown itself to be more than that. It has revealed itself as a necessary element in grappling with an emergency situation. The trained medical social worker has gone on the ground, with the surgeon and the nurse, in the midst of a calamity, and has justified her presence.

Serious as was the property loss at Halifax, the medical needs due to injury overshadowed them. Some three thousand persons received treatment at hospitals and dressing stations within a few days immediately following the explosion. All available hospital beds were utilized; patients were sent sixty-five miles away to hospitals at Truro, and later eighty were sent even to New Glasgow, over one hundred miles from Halifax. Katherine McMahon, head worker of the Social Service Department of the Boston Dispensary, was with the first Massachusetts part to carry Red Cross aid to the stricken city. She was shortly followed by a number of others under Red Cross auspices, among whom were Lucy Wright, formerly superintendent for the Massachusetts Commission for the Blind, and Elizabeth Richards Day, organizer and for some evers head worker of the Social Service Depart-

ment of the Boston Dispensary. Reports rendered to the Red Cross by Miss McMahon, Miss Wright and Mrs. Day supply the material and the occasion for this summary and interpretation of medical social service at Halifax.

Medical social service became active in Halifax about December 12, six days after the explosion. At that time it was estimated that fully 1,200 persons were in hospitals; but these figures are not wholly trustworthy. By December 16 the hospital population in Halifax and Dartmouth was 860. The American physicians who hurried to Halifax organized five hospitals, which were ready for operation by December 16, with a total capacity of 900 beds. Medical social service was attached to each of these hospitals, also to the Victoria General Hospital of Halifax, and a working relationship established with all of the militury hospitals.

The admirable understanding and cooperation of the physicians in the Halifax institutions at once revaled many immediate problems with which medical social service had to deal. Some of the patients were seriously, some slightly injured. The problem in some cases was a brief, in others a long one. In a large proportion of cases, however, the problem of readjusting the patient to normal life involved more than mere completion of the immediately apparent medical treatment. This is essentially the problem which medical conditions excite meets in every hospital—learning the social condition, that restoration to health and return to normal family and community relationships shall go hand in hand.

Since it was essential to keep these military hospitals for their proper purposes, it was the plan of Lieutenant-Colonel Bell, as soon as the American hospitals were established, to evacuate the military hospitals over to the American units, as rapidly as the condition of the patients permitted. This was speedily carried out, only sixty patients remaining in the military hospitals by January 1.

The part of medical social service was to study the social conditions of the patients in the hospitals. Trained medical social workers actually interviewed fully 800 of the hospital patients. They asked of themselves and of the hospitals this question: How shall these patients be brought back again, as fully as possible, into normal lives and relationships? They gave immediate assistance in six ways:

- 1. Aiding in getting out of the hospital patients who were in condition for discharge. In this stricken city this was often a complicated problem, involving in most cases the provision of proper clothing and of assurance to the doctor of shelter for his patient.
- cated problem, involving in most cases the provision of proper clothing and of assurance to the doctor of shelter for his patient. 2. Every hospital patient who was able to be talked with was interviewed, in order to gather sufficient data for registration with
- the Rehabilitation Committee, and also to discover any pressing medical social needs that should be taken up.

  5. Plans of cooperation for the care of individual patients had to be worked out with the District Nursing Committee, for those patients who, after discharge from the hospital, needed further medical care at the out-patient departments or dressing stations. Also, a cooperation had to be established with the Children's Committee, on special problems of children's with the Committee on the Blind, which was making the committee of the Blind, which was making the committee of the Blind, which was not proposed to the problems of the Blind, which was medical situation was no looger important.
- 4. A complete ceosus of the haodicapped was attempted, including eye injuries, fractures, wounds, burns and amputations.
- Making connections with organizations, committees and persons, who will or should have responsibility in working out follow-up and after-care—for example, the Victorian Order of Nurses, the physicians in the hospitals and outside.
- sicians in the hospitals and outside.

  6. Intensive case-work with individuals who presented social problems chiefly involving a medical situation.

As examples of case work, Miss McMahon cites a number; two will be illustrative:

Family of five. The father killed in the explosion; the mother totally blind; grid of 21, one eye enucleated and the other injured and needing careful medical supervision for some time before a prognosis can be made; grid of 17, one leg amputated below the kine; mother must be in the hospital for a long time, but the two grid and the boy were ready to leave. The medical social worker's problem was to find the proper place for them to stay. The older grid went to her employer's family, who were very much interested in all that concerned her; the second grid to a convent where one of he the title boy to the home of a relative.

Husband overseas. The mother seriously wounded and ready to be discharged from the hospital, but needing careful dressings for several weeks. Her own plan was to go to her mother in Amherst, a small village where the nearest medical care was eight miles. The medical social worker persuaded her to go to the Convalescent Hospital in Halifact, and arranged to find her two children who were in separate shelters, and take them to her mother in Amherst. This austified the mother and she was quite willing or occept convalencem

Thus, medical social service attempted the immediate task of promptly fitting the patient back into the community, after the completion of the immediate medical care. But a considerable proportion of the people were so seriously injured or handicapped or ill, that a longer range view was required. Therefore, two studies were undertaken: first, of the eye injuries, which, owing to the flying glass, was an outstanding and terrible feature of this calamity; second, of other types of serious injury or disease. The 330 eye cases were specially studied by Miss Wright, the others by Mrs. Day.

Newspapers reported that 700 persons were made totally blind and 1,800 partially blinded by the explosion. Far above the facts as these figures were, the truth about the eye injuries was tragic and urgent enough. The first demand was immediate relief by the surgeon's skill or otherwise. Miss Wright's aim was to reveal what lay behind and beyond. She studied 330 cases (since she left the number has been brought up to 633), and much of the unutterable agony of life can be read into her simple classifications, which include only a part of those studied: totally blind, 32; vision doubtful in both eyes, 58; blind in one eye, 124; vision doubtful in one eye, 171; vision recovered in both eyes after injury, 124.

"A woman of thirty-one, now totally blind," says Miss Wright, "is a patient in one hospital, while her little daughter, nine years of age, totally blind, is a patient in another. Two other children of this mother were killed in the explosion and two were bally cut, but will recover. The husband and father was killed at his work. This mother wanted to told what blind women may do, and felt that there would be real chances in life for her little blind daughter, but few for herself." Such was one instance wherein a plan for follow-up and after-care must be made while the patient is still in the hospital.

Reaching out into the community is the "need of adequate permanent provision for follow-up work and after-care, especially for the cases" in which the outcome is not yet certain. Suffering, economic loss and in some instances needless blindness could doubtless be prevented in a number of cases if proper follow-up work is done. Thus, "A child who received a blow in the eye at the time of the explosion had no trouble until two weeks later, when she was suddenly unable to open the eye. Her mother so far refuses treatment for her." Facilities for medical care of eyes; educational information for the public; supervision and vocational training for the blind and the near-blind-all these will be necessary and all will require a painstaking study of the types of cases needing attention and well-organized machinery to see that the required care is given and carried on so long as necessary. Miss Wright and the medical social workers who followed her at Halifax thus aimed to build a plan for these cases which would wisely link the present with the future.

Mrs. Day took up the study of other than eye injuries, with the same intention of analyzing the exact nature of the problems of these patients, and thus planning their ultimate medical care and social readjustment. By studying the hospital records, and by consultation with the medical, social and relief workers, such an analysis was made. Two thousand eight hundred and forty-six records were read, and out of these 330 cases of eye injury were selected for study by Miss Wright, while 261 were taken for special study by Mrs. Day. as they appeared to have injuries of a serious nature. The troubles from which these 261 patients suffered, said Mrs. Day, "represent two general groups: First, those that we know are definitely handicapped for life and for whom some further medical care and special industrial education and reeducation would be necessary. In this group at the present time fall the amputations only, twenty-five in number. The second group is an uncertain one, and includes those injuries the results of which it is too early to determine. Any one of three things may happen to the patients of the second group. They may entirely recover; they may grow worse and make amputation necessary, or they may only partially recover the use of the injured members. Such cases as serious burns, deep wounds, compound fractures, accompanied or unaccompanied by some sensis which may leave muscle contractions and stiffness of the joints, fall into this group. Some of the mental and paralysis cases may also be included here. The first group will require medical observation and massage for many months preparatory to artificial limbs and apparatus, together with a

plan for their vocational training, carefully worked out, psychologically and industrially. The suggestion has been made that vocational work might come through the school established for the handicapped soldiers,"

As examples of such cases, Mrs. Day cites:

Man, age 25, highly intelligent, who was working on the waterfrom at the time of the disaster and received injuries which necessisted the amputation of his left leg below the knee. He is matried, has one child, and has been averging \$10 a week as a sevedore. Temporarily his wife and haby are cared for by his wife's brother. Temporarily his wife and haby are cared for by his wife's brothers, Before leaving the hospital a shin graft is to be done and masse is advised for an indefinite time. The period of complete incapacity will be for a least three months and great care must be exercised in the proper fitting of an artificial leg. Meanwhile some industrial training should sart immediates.

Gil, age 7. Louse pares. in the disaster. Was brought to the bospits using from the disaster. Was brought to the bospits using from the disaster control was pitable; when the bospits were proposed to the merely cried a dazed fashion and trembled widerful; be was unable to speak or walk and are preactically nothing. Rest, quiet and good bygiene in normal surroundings were advised. The home conditions proved exceedingly poor. A well-meaning but ignorant grandmonher wished to take her into her home, where in there rooms were living a family of eleven, including seven or eight noisy children. Return to such environment would unquestionably mean serious if nor fatal consequences. The grandmother has at last responded to persussion and Mary is to be placed in a private home for six months, where the recommendations made by the physical conditions are considered to normal condition and able to return to her home improved if possible in the meanime.

"The results of this study," concludes Mrs, Day, "have been presented to a group of people representing the Medical Relief Committee, the Halifax Medical Society, the Rehabilitation Committee, and children's and nursing interests. It is their hope, as well as that of those most closely connected with these cases, that a medical social worker may be appointed for several months to work under the Rehabilitation Committee, whose special interest would be these seriously injured people. At the same time the Medical Relief Committee, in cooperation with the Halifax Medical Society, plan to enlarge the scope and general equipment of the Halifax dispensary, in order to meet the needs of those cases which require specialized surgical attention.

"If these two plans can be carried out there is every reason to believe that these two groups of cases, upon which the disaster has fallen so heavily, may be helped and relieved to the

full extent that service and science can contribute."

Thus, medical social service broke into the midst of a great calamity. It helped in the immediate emergency, but it also studied the problem presented by patients who could not at once reenter community life, and who needed a long period of care and gradual readjustment. In so doing it has demonstrated that the medical situations which arise out of any disaster cannot be handled merely as emergency measures, any more than the average case in a hospital or dispensary can be handled merely from the medical aspect. A study of the patient as a whole, in all his relationships, needs to be made before a complete plan can be devised for his permanent cure and refitting into the community. This is essentially the principle for which medical social service in hospitals and dispensaries has been contending for twelve years. The acceptance of the principle at Halifax itself, and the reception given it by physicians and social workers who were among the relief parties, has called it more widely to attention than ever before. No organization or "unit" formed to deal with a flood, fire, explosion or other disaster, can hereafter be regarded as complete, unless in addition to the doctors, nurses, relief workers and administrators, there is also a due proportion of trained medical social workers. If twelve years ago medical social service received its baptism, Halifax has been its confirmation day.

# "Help Wanted"

# The Employment of Women by Transportation Companies in New York City

# By Nelle Swartz

EXECUTIVE SECRETARY THE CONSUMERS' LEAGUE OF NEW YORK CITY

N December, 1917, New York city witnessed for the first time women in the role of guards and conductors in our transportation companies. By March, 1918, four common carriers had introduced women in these capacities.

- The New York Railways Company employ about 500 women as conductors.
- (2) The Brooklyn Rapid Transit Company employ about 1,000 as ticket choppers, porters and car-cleaners; as conductors on surface lines, as guards on subway and elevated lines.
- (3) The Hudson and Manhattan Railway Company employ about 30 as guards on the Hudson Tubes.
- (4) The Manhattan and Queens Traction Company employ women as conductors on the Queensboro Bridge and Jamaica routes.

The reason given by the companies for the introduction of women into this new industry is that the demands of military service have made irreparable inroads into the personnel of their employes; that the type of man needed for the work is not available and the fear of future drafts makes it unwise to limit their working force to men.

This seems a perfectly fair statement. But compare with this the figures of the public and private employment bureaus and the labor unions, who state that there is no shortage of labor. Where, then, is the hitch? Does it not lie in the fact that the "type" referred to by the companies are not able to accept work at the wage offered?

The policy of the companies to date has been to engage women on exactly the same terms as men. They receive the same pay—27 cents per hour as conductors, 24 cents per hour as guards. It is assumed that the women will be advanced at the same rate as men. Recruited as they are from the lower paid industries, i.e., laundries, factories, department stores and domestic service—the women themselves are first drawn to this work by their increased wages.

Good feminists and members of the League for Equal Op-

portunities for Women rejoice that here at last we have equal pay for equal work. The one cry that has gone out from the labor movement and social reformers alike is that in the replacement of men by women, women should not supersede the men by underbidding them. But we must be sure that future increase in the wage scale should not be subject to delay on account of the introduction of women.

It is significant that the companies themselves claim that since the introduction of women the men have become more docile. The companies themselves thereby acknowledge that the employment of women is being used as a club over the heads of men. The situation is still more acute in that the women themselves are satisfied, as far as the wages are concerned. It will hear watching.

It has been rumored that women were introduced into the transportation companies to ward off a coming increase which was expected by the men. If this is true the introduction of women will be a great factor in keeping down the wage scale.

The hours of women are the same as those for the men, usually a ten-hour day over a spread of from twelve to fourteen hours. The women work on the night shifts and usually seven days a week.

To one studying the hours in transportation, the present system seems most inefficient. That it is often necessary to spend three, four and sometimes five hours a day hanging around a car barn waiting to be sent out on runs seems unpardonable. To the women particularly this causes undue hardship. On account of the uncertainty of traffic and crowds, probably all of this could not be eliminated, but it is undoubtedly true that a legal curtailment of hours would lead to new scrutiny of methods and organization. In industries where a shorter work day has been introduced, "lost time" has been lessened. The inauguration of a shorter work day would be an added incentive to use more gray matter in solving the biggest problem that any industry faces, i.e., the human problem.

The companies claim that it would be well-nigh impossible to have different hours for the women than for the men; that there would be no way of knowing, for example, when "No. 1209" is ordered out on a car, whether a man or a woman will appear. The reply to that is there should be a way. The readjustment of a schedule to meet these conditions is no doubt complex but it should be met by an enlightened management and placed on a scientific basis. The state has long recognized the fact that because women are more susceptible to disease and because of their function of wives and mothers they should be protected from overstrain and overfatigues.

While we claim that the hours are much too long for women, they are also too long for men. No occupation should require so many hours of work that there is no time for leisure and recreation, no time to lead a wholesome, normal life.

From Wisconsin comes the word that the Industrial Commission there is limiting the hours of women in transportation to six hours a day; that women are forbidden from working at night. Furthermore, the Wisconsin Industrial Commission is asking the transportation companies to give proof that women are needed and necessary. The Industrial Commission of New York state has no such power, but it is the firm belief of many that the 1918 legislature should enact legislation similar to the factory and mercantile acts which would limit the hours of women to ten hours a day, forbidding their employment at night and giving them one day of rest in seven (Senate bill by Nicoll, Int. No. 210; Assembly bill by Meer, Int. No. 910; Assembly bill by Meer, Int. No. 910;

The question of women standing for ten hours is another serious problem to be met, especially for those women employed as conductors on the pay-as-you-enter cars and on the Hudson Tubes and the Brooklyn Rapid Transit as guards.

Physicians have always testified to the fact that women, because of their physiological make-up, should not stand for long hours. It is injurious to their health. Our factory and mercantile laws provide for seats for women. If women are to be used in transportation, suitable seats should either be provided for them or they should be forbidden from employment where the use of seats is not practicable and their hours should be considerably shortened.

Labor turn-over could be reduced to a considerable extent by the companies if a woman supervisor were employed to hear complaints, supervise employment, and to be familiar with schedules of work of the women. Many women have considered leaving because they feel a heistancy of talking over with men personal problems in relation to their employment. It is a well-established fact that where women are employed a woman personnel manager tends to increase the efficiency of the women by adjustment of complaints and to reduce labor turn-over.

The companies claim that as far as their labor policy is concerned it is an "open shop." Trade-unionism, however, has never flourished in these public utilities, and the feeling is expressed by many employes that union members are not hired and that men have been discharged for attending meetings of their organization. The fact remains that there is no form of collective bargaining in operation reached by an agreement between the organization of employers and an organization of employes.

Hours for women can be regulated by legislation, but as long as workers are engaged by the companies on an individual contract it will be impossible to adjust the wage scale fairly to all parties concerned and with due regard to the increased cost of living.

Sixty women's clubs in the Philippine Islands are cooperating with the Burcan of Agriculture in a food construction and vegetable-growing campaign. The Woman's Club of Manila, in this connection, recently held a parade in which school children and boy scoust also took part and which took an hour to past a given point. It was the first open-air demonstration, religious processions apart, in which Filipinas have very taken part.

# The British Miners and the War

AN INTERVIEW WITH

# Robert Smillie

PRESIDENT OF THE LANARKSHIRE MINERS' UNION [SCOTLAND], PRESIDENT OF THE MINERS' FEDERATION OF GREAT BRITAIN, CHAIRMAN OF THE TRIPLE ALLIANCE OF RAILWAY MEN. TRANSPORT WORKERS AND MINERS

MR. SMILLIE comes from the same district which gave Keir Hardy and Alexander MacDonald (the great miners' leader and one of the first labor members of Parliament) to the English labor movement. He is the day the executive of the largest and most powerful trade union alliance in Great Britain—and perhaps in the world. While, earlier in the war his views on wor policy and peace were outspokenly at variance with the general trend of tentiment within the ronks of organized labor, so sewe was his standing among the men for trusted leadership and ability that he was kept at his post. The government itself appointed him to membership on the Whitley commission whose report forms the basis of British policy for industrial reconstruction now and after the war.

Robert Smillie has seven groum sons—all Socialists like their father. Two of them came to him when the word roke out and said, "We know how you stand. We believe as you do. But if there is to be killing and sweating we will take our share of it." And they volunteered. Two other sons came to him; they were conscientious objectors, and have been accepted as such by the tribunals, being allowed to work in callings of national importance: one on a farm and one in timber cuttings. There other sons are at work in the mines and steel mills. One of the first named is an officer who put his training in the pits to account in helping carry out the largest millitary mining operation on the western front. He was later involided back to England with neurasthenia as a result of nine days in which he was cooped in a dug-out in the midst of artillery first.

Smillie himself is a man of about fifty-five or sixty, a Scotchman in the bur of his tongue and a miner in the set of his shoulders. In his rough twoceds, pipe in mouth, in a room so cold that he paced back and forth to keep warm, he made this statement at Nottingham of how things stand, from his point of view, with the men of the mining industry and the war. His position, like that of Snowden, Lambury and Anderson, has been much more consistent than that of Henderson, Thomas and others who are joining with them in the new 'labor of, ensive' [use UNEWF for March 2 and March 0]; but it much more extreme. With the "swing to the left," it must be reckoned with in estimating the trend of British working class opinion. The interview was given in January, however, before the German armies had forced acceptance of their conquests on the eastern front.

On March 10, the British government announced its decition to proceed with the recruitment of fifty thousand more coal miners—a decision unexpected, as the miners had not finished taking a ballot of the entire membership as to whether to accept the government's plan of recruiting. "The opinion in labor circles," reads a cable to the New York Sun, "is that the order which becomes effective March 21 will tend to revive unrest in the mining districts."

UR experience in this country was that when war was declared it undoubtedly created an enormous mount of enthusiasm. Men of all ranks rushed to join the army, for what to them seemed the holiest cause that could be—the defense of small nations and treaties. Fathers and sons went together to recruiting offices, and fathers made misstatements about their ages in order to be accepted as recruits.

Moreover, there seemed to be a special desire to have miners on the part of the military authorities, who stated on many occasions that miners made the best class of soldiers. They had been used to facing dangers all their lives in mine work. The nature of the employment had developed them and made them strong. They did not require so much training as people who joined from sedentary employments. Within the first eighteen months about a quarter of a million miners joined the colors—or, roughly, 25 per cent of the mine workers.

We found so many miners leaving the mines, there was serious danger that a falling output of coal would interfere with the engineering and munitions works. A very large number of elderly men who had previously been miners came back to the pits, and a large number of outside laborers came in. In addition, some thousands of miners who either broke down in training or were wounded were sent back. The military authorities did not, however, return any Class A

men, and the districts managed to keep up output with the additional labor mentioned.

It was evidently the intention of the military authorities and employers that soldiers coming back into the mines and into munition work should be under military discipline and should wear the uniform and work at soldiers' pay. The miners in conference decided that they would insist that these men should have full civilian rights, that they should have to be members of the trade union, and that they should not be used as strike breakers. The government agreed to this line, and the soldiers returned to the mines are in the same position as other workers.

All members of the miners' unions who have gone to the front have been kept in full membership without payment while there, and will be accepted back in good standing on their return. All those who have come into the mines from the ounside have, of course, linked up with the unions. [The present situation is that in probably 95 per cent of the coal mines of Great Britain all persons connected with mining labor must be members of the organization.] In the majority of the branches of the miners' federation the payment of six-pence per year to the union secures funeral benefits to the miner, his wife and children. Because of the number of miners who joined the army, the deaths at the front have been exceptionally heavy, and death claims have been paid out in all cases. This has been a serious drain on the unions, but

679

as there have been no serious or widespread strikes, they are financially stronger than they were prior to the war. Including those at the front, they number 800,000 miners— 60,000 or 70,000 higher than before the war. But no less than three hundred thousand have joined the forces. Since the falling off of the export coal trade the output of the mines is, of course, considerably under that of normal times, not because the individual miner has turned out less, but because there are less men engaged.

Previous to the war, miners usually sent one or two of their isons to learn a trade outside the industry; since the war, all boys of a miner's family, generally speaking, have gone to the pits or are working on the surface. In Scotland the boys go right to the coal base as drivers; in other parts they go as trapper boys or pony drivers. At all conferences the miners are in favor of raising the minimum age to fifteen and sixteen, but during the war this has not been possible.

There are no women underground in any part of Great Britain, as was the case in the middle of the last century; but on the surface, in Lancashire and Scotland, there has been an increase since the war in the number of women employed to take the places of men and boys in clearing and manipulating coal on the surface. We insist that these women or young girls receive the same wages paid to the men or boys whose work they are doing, and in our last claim for an increase in wages the women got the full increase of nine shillings per week, secured by the men. In nearly all the mining districts outside of Lancashire and Scotland the mine workers object strongly to their women being employed about the mines. If it had not been for the war, the probability is that a strong movement would have been set afoot to have female labor abolished even in Lancashire and Scotland. The question of the women being competitors of the men has not entered in. By insisting on the same wages for the same work we eliminate that. The miners do not think it is suitable work for the future mothers of the race. It is in many cases dirty and hard work. The women who have come to mining work since the war broke out will, in all probability, leave it-after things have settled down. Under reconstruction, if it is seriously gone into in the nation's interest, many channels of employment will open up, and make the pressure on them to earn in this way less severe.

### Reconstruction as the Miners See It

I HAVE probably a more unique opportunity for testing the views of the organized workers of the country than most people because I have spent the last three years in addressing mass meetings in every corner of England, Scotland and Wales. The majority of those meetings have been called under trade union auspices, and the chief matters dealt with have been the preservation by organized labor of the liberties which it has taken so many years to secure, and the furtherance of a greater after-the-war reconstruction movement, by which the land of Great Britain will be taken over from its present holders and used in the interests of the people; and mines, railways and workshops will be used for the production of commodities for use, and not merely to build up fortunes for the capitalist class. The miners' conferences are practically unanimously in favor of state ownership of the land and of replacing the people as food producers on land which is now unused. They are certainly determined that as far as in them lies the government shall not only continue in control of the mines, but extend that control to state ownership. The syndicalist idea of miners' working, managing and owning the mines has not a very deep hold on the miners of this country. They fully expect, if the mines are owned and controlled by the state, that the workmen will have a considerable voice in the management in view of the fact that they have more than livelihood at stake. Their safety of life and limb justifies the claim that they shall be represented in the management. We feel that many accidents of a more or less dangerous character arise not from the carclessness of the present management so much as through the desire to secure the largest possible output at the smallest possible costs.

# How They Held on to the Right to Strike

PROBABLY the most important factor in industrial relations in the war was the attempt of the government to put miners under the munitions act. This would have taken from them the right to strike, and would have placed their leaders under a clause which imposed a heavy fine or imprisonment on any leader who had part in one. Mr. Lloyd George was minister of munitions when that bill went through, I saw him on behalf of the miners and told him that under no circumstances would the miners allow themselves to be placed under the munitions act. He ultimately agreed. That very fact has done more to keep some little shred of freedom for the workers of this country than any other thing that has happened. All the strikes that have taken place in shipyards, engineering and munition centers have been illegal strikes. They have been unconstitutional, as the officials of the unions dare not consent to them. No trade union funds have been paid out to the strikers. Yet the government could not act as strongly as it pleased against men who came out on strike because of the fact that the great mining movement was still free to take industrial action at any time. The government could not act drastically elsewhere, when the trade union movement generally knew the miners had held out and were free when their own leaders had permitted them to be put under the act.

One of the local branches of the miners' organization in Scotland passed a resolution that if other trade unionists were badly treated they would stop out of sympathy. But the necessity has never arisen.

In South Wales a dispute broke out immediately after the munitions act was passed—the most important area in Great Britain from the point of view that it supplies admiralty coal for Britain, France and Italy.

The government got the king to "proclaim" the South Wales miners, which was equal to placing them under the munitions act for the time being. The government then endeavored to get them to return to work. But the very fact that the line had been taken of proclaiming their strike as illegal stiffened them; and the government ultimately had to take over control of the Welsh mines and to force the employers to concede the points for which the workers were contending—a substantial increase in wages to help meet the increase in the cost of living.

Since then the government has taken over control of all the mines of Great Britain, metal, as well as coal; lime and other quarries; also brick ovens and coke-producing plants.

In August last the Miners' Federation, which includes the men of all of the coal mining districts of England, Scotland and Wales, made a demand for a general increase in wages, to help meet the increase in the cost of living. They made this demand not to the mine owners, but directly to the government through the coal controllers and threatened a common strike unless a substantial advance was conceded. In September last an increase of one and sixpence per day was granted to all men and women working in and about the mines who were over sixteen years old, and ninepence per day to all minors under sixteen.

It might be said that during the first two years of this war the nine workers of the country were probably the strongest in their devotion to the government in its policies and in their enthusiasm for the war. They always opposed and voted against conscription, but accepted it with other measures as they came along. But as mining was made an exempted industry, it did not fall on them hard.

Now, I feel sure, not only could it be said that their enthusiasm has been seriously dampened, but to a great extent it has gone our altogether. Voluntary recruting is now out of the question, not only at the mines, but from the industries. Nearly every soldier that joins from industry at the present time is a conscript.

# The Change in Feeling

I THINK the feeling is now with the majority of the workers of the country that a satisfactory and lasting peace could be secured by negotiation between the allies and the central powers. The feeling is strongly held by the majority that a peace could have been secured by negotiation twelve months ago, had it not been for the imperialistic aims of the ruling and government classes in the allied countries and, of course, in Germany and Austria.

I am speaking now for what I believe to be the majority and, more important, the more active and rebellious section. Their view of a settlement is that this war will ultimately be settled by negotiation and not by a military victory on either hand—and that hunger in the belligerent nations and the lack of supply of men will be the deciding factors in bringing this about. If this view is a correct one, then it follows that it must be also correct that negotiations ought to take place now rather than twelve months hence, when hundreds of thousands of men of all the nations whose lives might be saved, will have been wiped out.

This mining county of Nottingham may be taken as one of the most backward in Great Britain. From the advanced labor and political points of view, it has always been considered reactionary and the home of liberalism and liberal-laborism, as opposed to independence. It is now showing a wonderful movement of a revolutionary character. My own action as president of the Miners' Federation of Great Britain in holding as I do strong views in opposition to the unnecessary continuance of the war was the subject of severe criticism at branch meetings of the miners in Nottinghamshire earlier in the war. On invitation of the Miners' Association I have addressed three mass meetings this past week. At the one held last night, there were in attendance considerably over two thousand men and women. There were some railway workers present, but the men were chiefly miners. At these meetings every reference to an early settlement to the war by negotiation, every reference to the building up of the International at the earliest possible moment after the war, every statement that liberalism and conservatism, the old political parties, should be thrown aside and all classes of the democracy unite together in the building up of a people's party, perform their own government and carry on the affairs of the nation, in the interest of the democracy-was cheered to the echo.

I should like to add that from very wide experience in public meetings I was simply amazed at the enthusiasm shown. I feel certain that eighteen months ago I should not have been allowed to deliver those speeches here. I find that this change in temper, generally speaking, applies to every district in which I have been during the past few months. Though it is well known everywhere what my views are, and that I have been and am in direct opposition to the vast majority of the national trade union leaders of the country, I am receiving hundreds of letters from branch trade unions and local trade and labor councils to address meetings.

The rank and file of the workers are changing their minds far more rapidly upon the question of the necessity for pushing in the direction of an early peace than are the old leaders. I am convinced that the pressure from the rank and file will within a very short time force a change, if not in the opinions at least in the expressions of many of the leaders of the trade union movement.

There will not be this change in Scotland or Wales, because in those two countries the men have been anxious for peace negotiations for a considerable time. The same thing may be said of Northumberland. But the change which I have described as taking place in Nortingham is going forward in Durham, Yorkshire, Staffordshire and Derbyshire.

I have watched the change in my own county (Lanarkshire) and there it is very marked. Two years ago, though I am a trusted and favorite servant of the men, and they would not like to do anything that would seem to injure or offend me, I remember that in our conferences the vast majority of the delegates were fight-to-the-finish and knock-out-blow men. I have watched the change carefully, and I venture to say that the question of the earliest possible peace by negotiation, without annexation or indemnity, would be carried in Lanarkshire almost to a man. There is certainly a strong feeling in the districts of the country and in the conferences where the branch delegates meet against any more men being taken from the mines. The feeling is that peace could be secured if the British government were anxious to bring about an early settlement of the war.

### Causes of the Change

THE first cause of this change has been a natural one. We have been three and a half years in the most terrible war ever seen. Every village has its widows and orphans and mothers who have lost their sons. There is undoubtedly a war weariness.

Then the greed of the capitalist class and the profiteers has been another fruitful cause for bringing the people to look for peace. And the hideous mistakes which have undoubtedly been made, the blunders by some of our higher commands which have meant the useless slaughter of so many of the rank and file—Gallipoli, Mesopotamia and the latest at Cambrai—have added to the causes. These have all tended to make people tired of the thing; the food shortage, women and children standing in nucues have added to it.

But probably the chief cause of the change which has taken place in the minds of our people has been that they have come to find out through recent revelations in Russia that to a very great extent we were misled at the outbreak of the war. that we have not been in it solely because Belgium was invaded, but that there are many other factors. Our capitalist classes and great armament firms and the jingo imperialists with their greed for new lands to exploit and develop-a greed common to Russia, Germany, Austria, Italy, France and ourselves-they were all in it-were desirous of laying their hands on the possessions of other more primitive peoples. When you recall how Russia and ourselves divided Persia, how Germany wished for Bagdad and we sought to prevent it-out, all of us, for mineral resources and oil-those were the real causes. And there is now an extraordinary number of our work people that are reading those facts and spreading them among their fellows. Our people, in growing numbers, have come to the conclusion that so far as the working people of Germany are concerned they are pretty much the same as ourselves, and there is no real cause for war between us. I must admit that to me it has been rather amazing that all the efforts of the jingo imperialistic press to get up a bitter hatred against the German and Austrian people amongst the workers of this country have utterly failed. There is a hatred of the Junker and military class of Germany, and there is a growing bitterness against the same class in our own country. Our people to a very great extent believed that the very strength of the German military machine was proof that she was preparing for years for an attack on her near neighbors. But now, from the information that has leaked out, our people are realizing that Germany's great preparations may have been caused by her fear that combinations and preparations outside her own borders made it inevitable that she should prepare for a combined attack. The difficulty has been that up to the present time the governments of the opposing nations have managed to make their own peoples believe that they are fighting a defensive war and not one of aggression. That is the reason why working class opinion has not been more strongly expressed. If we can prove to the German people that the democracy of this country is not out to smash Germany as a nation and cut off Germany from free commerce with the rest of the world-if we can prove that we are out to rebuild the world nationally and internationally on lines of brotherhood and lasting peace-if we can prove to them that our ultimate aims are in keeping with the proposals of the best of the Russian revolutionists, for the final establishment of the cooperative commonwealth, and the rights of the people of all the nations to govern themselves in their own way, I have great hope of a strong and hearty response from the German people. If they did not respond, I at least should be sadly disappointed and should, I think, have to change absolutely my views of them.

Once we get our allies to accept labor's war aims (or peace aims, as I prefer to call them) we must manage to put them before the representatives of the German and Austrian democracy. If we then get an authoritative statement, representative of the views of the German Socialists and trade unionists, that they are not prepared to enter into negotiations, but are prepared to stand behind their government and military machine until the allies are conquered and military victory secured for Germany, then I feel sure there would be a strong and almost a united movement amongst the people of this country, that we must fight on and use all the powers we possess in what would then be a defensive war against unreasonable and outrageous opponents.

### To American Labor

Ir I were to send a message and greeting from the federation and myself to the whole working class of America, and especially the mining movement it would be this: we have so much in common—a common language and almost a common fatherland. And then we have this, that the workers from practically every nation in Europe are finding their way to your great republic, your great developing nation. They are forming under the stars and stripes a great human brotherhood of men of different creeds and different races such as we are hopeful to establish among nations of Europe in the near future.

The war aims of the British labor movement have now been brought out and have been passed with comparative unanimity by a conference representing every phase of the labor movement. I hope that our American fellow workers and the American people as a whole will join with us in endeavoring to secure peace along the lines marked out by the British workers.

DRINK AND THE WAR By Marr Murray. E. P. Dutton & Co. 156 pp. P SURVEY \$.56.

Just imported by Dutton's, this book was written in 1915 and brings us, therefore, only a partial report on drink and the war. It has no information as to what the Bolsheviki have done with the Czar's ukase against vodka, it makes no mention whatever of our national amendment, of the proposed war prohibition in the United States or of a dry zone for our soldiers in France. And there is only slight reference to prohibition as a measure of food con-

The book is nevertheless interesting as showing the position of great numbers of thinking men like the author, who "hastens to state" in the first paragraph of his introduction that he is not a teetotaler or a member of any temperance society, nor is he interested financially in the liquor trade; he is "an ordinary person who is fond of an occasional glass of beer," He states his case on the cover of the book in a quotation from the Kaiser-"The nation that will win in this war will be the one which is the most sober;" and later in the familiar words of Mr. Lloyd George-"We are fighting Germany, Austria and drink and, as far as I can see, the greatest of these deadly foes is drink."

He shows by quotation from the highest military and medical authorities that troops who have no liquor hit harder, shoot straighter, stand more work and exposure and recover more quickly from wounds than their drinking comrades. He is outspoken in his criticism of the revival of the rum ration for the British army contrary to medical advice, and of the unsolicited creation of canteens for the Canadians and other colonials who came to Great Britain tectotalers and left it something very different. The citizen armies of this war, recruited from all ranks of society, are much less able to look after themselves than the old regulars, who had knocked about the world and knew its ways.

On the industrial side, he had merely to pick and choose among the great amount of available information to show that the manufacture of munitions vital to all the allies, the building and repairing of ships and the conduct of the transportation and transport services were slowed down perhaps a third from their normal activity before the war. Excessive drinking among a compara-

THE APPROACHES TO THE GREAT SETTLEMENT, By Emily Greene Baleh. B. W. Huebsch. Price \$2.00; by mail of SURVEY \$2.12

There is no exaggeration in saying that when the great war broke out in 1914, intelligent Americans were less prepared to understand the political, economic and diplomatic background than were the intelligent citizens of the cultured nations of Europe. Americans had not been interested in foreign affairs. Hence at the beginning of the war there was a good deal of confusion of thought concerning the issues. As the war has gone on, this condition has been remedied, for intelligent Americans have devoted much time and energy to learning about the issues. One remarkable thing, however, about this is that, as the war has been prolonged, the statements of the combatants as to the issues at stake have changed, hence the terms upon which they have been willing to make peace have changed.

If intelligent Americans are to approach the final peace conference, whenever it comes, with an understanding attitude, they ought to be familiar with the various programs that have been put forth. That, however, has been a very difficult thing to do. But fragmentary reports of peace programs and of peace conferences that have been held in Europe have reached the United States, and the censor has sometimes played havoc with those.

Hence the opportuneness of this admirable book. Miss Balch has described in it every attempt to bring about peace that has been made, official and unofficial. She has considered similarly every peace program that has been put forth, whether official or unofficial. For the first time the average American has an opportunity to read a complete statement about many peace activities that have been hitherto beclouded by bitter controversy, e. g., the Stockholm conference. He has now the opportunity of comparing, side by side, the statements concerning peace made by the responsible statesmen of all the belligerents. But he has also for the first time the chance to compare the peace programs of the strong and progressive organizations of the various countries, such as the Union for Democratic Control in England, the English Labour Party, the American Alliance for Labor and Democracy, and the Socialist parties of the various continental countries. It is a rich feast,

The author is to be congratulated upon the orderly and interesting organization of her material, Moreover, her own views are nowhere imposed upon the reader. The various documents are connected by a running commentary, which is simply descriptive of fact and not of opinion and keeps one familiar with the chronology of events. Miss Balch draws no conclusions for the reader. But one can hardly read this volume without being struck by one hopeful fact, viz: the change in emphasis from the emphemeral aspects of peace, such as the distribution of territory, to its more permanent aspects, such as the kind of international organization that must be adopted when the war is over.

One also gets the impression that the peace conference will be more under the control of the intelligent public opinion of the various countries than seemed tively few men in the crews, and increased drinking among larger numbers earning the high wartime wages are undoubtedly responsible. The change in excise taxes served merely to bring practically to a level the prices of the better beers and of the worst spirits. The result, of course, was to increase the consumption of spirits.

Having thus made his case against liquor and having declared that men were ready for "root and branch" action-"the whole nation was prepared to accept any sacrifice that might be necessary in order to cut away the evil" -it is all the more astonishing that the author does not ask for prohibition but contents himself with abusing the government for failing to enact his own very moderate program as follows: "(1) To prohibit the sale of spirits, especially whisky; (2) to restrict the hours of public-houses and other licensed premises to two hours in the morning and three in the early evening; and (3) make some satisfactory provision for those workmen who are employed on night shifts," He seems not to realize, or at any rate to state, that these very measures have been the subject of practical experiment and have always failed, as Mrs. Tilton has shown in the SURVEY.

Two very interesting sidelights are brought out. In Russia, there was not only the niiracle of a nation turned from heavy drinker to teetotaler, but the elimination of the debauches and delays of the mobilization against Japan, which brought the Russian armies to the front three weeks earlier than the Germans expected them. The degree and the time of the pressure thus brought on the eastern front, the author believes to have saved Paris—an interesting theory, but one which perhaps does less than justice to the stand of the Belgians.

The other is his discussion of drink and atrocities. His theory is that German peasants and workingmen, used to drinking large quantities of light beer, took equal quantities of the heady wines they found on every hand, and went on a prolonged spree. The fact of drunkenness among both officers and men is well established; as an occupying army, the property and persons of the natives were at their disposal; the resulting atrocities were not acts of calculated cruelty but the irresponsible orgies of a drunken mob-Belgium was raped by John Barleycorn. To the author's argument it might be added that some of the acts done, particularly those of an unnatural sexual character, are of the sort that men do only when they are deep in their cups.

A concluding chapter on temperance and the British Empire is written to the thesis that "the Bible and drink go hand in hand with the Union Jack." British traders, for their profits, and the British government, for its taxes, have forced liquor down the unwilling throats of Buddhists, Mohammedans and Hindus, who were teetotalers by both practice and religious profession.

The final outcome of the argument in the book is thus stated: "War has caused us to realize that the liquor trade in this country is far too big and far too powerful for the best interests of the nation. When once this becomes fully appreciated by all classes then the liquor trade will shrink into its proper position in the national economy, and the liquor evil will die a natural death," But this, like so much of the argument about alcohol, wherever occurring, is befuddled. It does not square with the author's program of reform, 1, 2 and 3, given above; for to eliminate distilling will in no wise limit and may in fact increase the economic and political power of the brewers; and to curtail hours will not abrogate excise taxes, so that the government which decries the liquor trade continues to take a profit from the sale of liquor.

### ARTHUR P. KELLOGG.

THE UNMARRIED MOTHER
By Percy Gamble Kammerer. Little,
Brown & Co. 342 pp. Price \$3.00; by mail
of SURVEY \$3.15.

Such a piece of research as a careful analysis of five hundred cases of a selected group necessarily brings to light much useful material, and even though, as in this volume, there is lirlle that is arrestingly new, it is valuable and stimulating to have confirmation of theories as well as to have fresh emphasis laid on factors which experience long since proved basic in the causation of delinouency.

The healthy-minded worker does not react to sordid or otherwise deplorable conditions by becoming inhibited, but seeks to relieve, or better, to prevent.

Such a study as this, based on actual cases and presented without didactic comment, should prove suggestive to many people working with children and adolescents, whose environment and general make-up correspond to those outlined by Mr. Kanmerer.

The method which he employs is that of case histories arranged to illustrate causative factors. He presents in concise form an enumeration of causative factors as well as the number of instances in which the specific factor appears, either as a maior or minor cause.

In the estimation of causative factors of sexual irregularity we believe that too little point is made in this book of the truenedous emotional appeal, the force of which must in the majority of cases be the determining factor in the final surrender, regardless of other conditions which are contributory in that they have either failed to establish inhibitions or have broken down existing

It is unfortunate that in a study made as carefully as this one and involving as many cases, there is not more exact information regarding mental condition. Out of 500 cases but 132, or 26.4 per cent, had been given mental examinations.

While we agree with the author that, as a rule, faulty environment is inextricably bound up with mental abnormality in causing delinquency, nevertheless, particularly in a study of this nature, it would be of distinct value to have reliable data as to how many of these 500 unmarried mothers are feebleminded. In this country, while it may be assumed that among those who allow preguancy to proceed uninterruptedly the mental defectives form an important group, because of their lack of initiative and blunted sensibilities, we need scientific proof of this point.

Another important subject concerning which we looked in vain for information was veneral disease. Although mentioned in certain cases, there is no table or other systematic method of recording for all or for the majority of cases.

The author makes an interesting point worthy of note when he says: "In not more than a very few instances does the girl become pregnant as the result of intercourse which is indulged in for the sake of prostitution. This draws attention to a fact often overlooked, viz., the distinction between the girls and young women who give birth to illegitimate children and those who are prostitutes. It may be that illegitimacy is a condition which frequently leads to prostitution after the birth of a child, but it is evident that the sexual laxness leading to pregnancy is in the large majority of cases to be distinguished clearly from prostitution.'

The author concludes from the evidence of his immediate study as well as from a survey of the subject of illegitimacy made in this and in other countries that four distinct lines of social activity should be undertaken; first. steps should be taken for the control or segregation of the mentally abnormal women during child-bearing age; second, an attempt should be made to enact laws which will reflect the European experiences in regard to the unmarried mother, emphasis being laid on the care of the child; third, an extension of the efforts towards general social betterment which should seek to improve conditions in the home, to enlist the co-operation of parents in the lives of their daughters, to recognize the value of recreation, etc.; fourth, a revision of the attitude of the public towards questions of sex in general which would call for a carefully thought-out policy of sexual hygiene.

A review of this book, however brief, would be incomplete without mentioning the appreciative and thoughtful introduction of Dr. Healy, in which exple

curs the following pertinent statement: "After all the one vital fact that is really the greatest concern of society regarding illegitimacy is the illegitimate child. . . . A society that does not properly care for this individual, born or unborn, callously sins against its own moral and physical welfare."

ANNE T. BINGHAM.

A WORLD IN FERMENT

By Nicholas Murray Butler. Charles Scribner's Sons. 254 pp. Price \$1.25; by mail of the SURVEY \$1.35.

To publish under a single title a volume of addresses delivered on different occasions during a period of three years is clearly a hazardous undertaking. It becomes even more so when, because of a world war, events are rapidly changing the situation. Dr. Butler has assumed this risk, and anyone who takes the time to read the contents of this volume will not only possess better grounds for his own patriotism, but will gain a fairer perspective upon the mission and destiny of his country, essential unity of the volume is found in the comprehension with which the author views the international tragedy of the past three and a half years, and the part which he believes the United States ought to play and is playing in that tragedy.

It is worth noticing that in the earlier addresses, delivered before the United States entered the war, there is little, if anything, that is out of harmony with the eloquent appeals to Americans for consecrated loyalty and service in winning the war, which appear in the later chapters. We find throughout the volume a thoroughly constructive presentation of the principles governing our alliance with other powers to crush militarism. There is almost entire absence of criticism of those who are directing the undertaking and no note of foreboding. The author believes that the opportunity is come for America to place her democracy in the balance against the autocracy of Germany, and to join other free nations in a struggle for the freedom of the world.

Dr. Butler often refers to the great men and the great achievements of our earlier history. He points to America as the grandest instance of federated government the world has yet seen and hopes that out of the confusion of the great conflict we may see an orderly process of federation among the states of the world. He lays much emphasis upon the actual accomplishments at the Hague and sees in the notable results gained in the field of arbitration and in the accepted principle of the world court the true foundations for further progress in the international field. Dr. Butler squares his hatred of war and militarism with an endorsement of universal service, by distinguishing sharply between military training for expected war, and such physical and intellectual development of young men as will make them good citizens and fit for any emergency. This illuminating distinction is most important now to offset the propaganda of those who have long wished to make the United States a military nation.

In treating the United States as a world power, our attention is directed to what so many overlook, that the possession of mere force expressed in military establishments does not make a nation great. It is rather the use of national resources in a beneficent way for the helping of all peoples, freeing the enslaved, the relief of the suffering and oppressed, giving education and enlightenment to the benighted and backward, that makes America a true world power. The same idea is developed in an address upon higher preparedness. We must make this a model nation at home and a model nation abroad. While the author believes in remembering the injunction of Washington not to depart from the path of established policy and to refrain from unworthy alliances, he would have America ally herself with all nations in such a way that American spirit and American convictions may impress themselves upon the world civilization. "Give us a mind to seek," he says, "a heart to feel and a voice to proclaim what the American people of this day and this generation aspire to do at home and abroad."

On several occasions, especially at Columbia University, Dr. Butler has summoned to the nation's service both young and old in terms which may justly be called eloquent. That the United States has responded nobly is proven by the depleted ranks of both students and faculty. Thus in word and deed, Dr. Butler has drawn a sharp line between peace-loving efforts made before the great conflict to remove the causes of war, and the unwise and seditious efforts of pacifists at the present time to bring about a premature peace.

President Butler pleads for the "international mind." "The international mind is nothing else than that habit of thinking of foreign relations and business and that habit of dealing with them which regard the several nations of the civilized world as free and cooperating equals in aiding the progress of civilization, in developing commerce and industry, and in spreading enlightenment and culture throughout the world." And again: "The international mind requires that a nation and its government shall freely and gladly grant to every other nation and to every other government the rights and the privileges which it claims for itself." The international mind is seen to include not only the historical grasp of events and agree to act as men rather than as demons, when they will no longer be fearful of each other but be glad to their meaning, but the philosophical insight which sees through the clouds and mist of the present unhappy times to the great day when all nations will share in the common prosperity which peace insures to the world.

SAMUEL T. DUTTON.

MARKETING AND HOUSEWORK MANUAL

By S. Agnes Donham. Little, Brown & Co. 241 pp. Price \$1.50; by mail of SURVEY \$1.60.

Miss Donham is instructor in household management in the Garland School of Homemaking, Boston, and says in her introduction that this manual is the result of twenty years of study and experience in teaching. Since it covers in detail housework operations, from reading the gas meter to closing up a house, as well as marketing and menu-making, it includes, naturally, much material familiar to the housekeeper of experience and to the teacher of housekeeping subjects. The clear and concise arrangement, however, makes it possible to get from the pages whatever information is desired without going through paragraph after paragraph.

the book is in charts and tables, in which the subjects are arranged in alphabetical order with the most important information concerning each tabulated under a suitable head. For example, the marketing chart gives under the heading of Meats the name of the cut, the location (in the animal), the characteristics, use, the weight of average cuts; under Fish, season, characteristics, uses, point of choice, average weight; the vegetable chart gives the name of the vegetable chart gives the name of the vegetable, the part used, season, points of choice, prices, amount to buy, care and preparation, cooking and serving, and what it

is valuable for (mineral salts, carbohy-

drates, etc.). A grocery chart on which

information concerning household arti-

cles and foods not included under the

other headings appears, gives the amount

to buy, points of choice, care in the

Almost the whole of the contents of

home. Even the experienced housewife will find in these concise tabulations information of which she has felt the need. Full description of two interesting plans for menu-making are given; one by card and one by chart. This and the instruction on laundry work cleaning.

instruction on laundry work, cleaning, dish-washing and serving of meals will be of particular service to the young housewife who must give directions on these subjects to a maid. Much information not readily obtained, such as ways of treating woods of different kinds and finishes, utensils of different metals, is included.

A valuable feature of the book is that it sets a standard in results to be desired as well as the method by which they are to be obtained.

FLORENCE NESBITT, OG C

# PRE-WAR EFFORTS TOWARD A LEAGUE OF PEACE

REMARKABLE postscript to A diplomatic correspondence given out at the outbreak of the war has been brought out by the Journal Politiken, the organ of the Swedish Socialists of the extreme left. This is a memorandum written eighteen months ago by Prince Lichnowsky, formerly German ambassador to London. The memorandum is interesting, in the first place, as revealing the efforts put forward by Sir Edward Grey in 1914 and before to weave a fabric of international agreements which would prevent war, and in a sense foreshadowed a league of nations, Prince Lichnowsky wrote:

To reach an agreement with us his [Greyt] aim was not to isolate us, but to get us to take part in the already established concert. Having succeeded in throwing a bridge across the Freechald this, and Russo-possible to remove the causes of frietion between England and Germany and by a network of agreements to which might well eventually have been added an agreement the peace of the the peace of the world.

This was Sir Edward Grey's programme in his own words "Without prejudice to existing friendly understanding with France and Russia, which pursued no aggressive aims and involved in hemselves for England no binding obligations, to reach a friendly approachment and understanding with Germany," in short to bring the two groups nearer together.

In England as in Germany there were in this connection two sebools of opinion-opicimists, who believed in the possibility of an understanding, and pessimists, who consideered that war sooner or later was unavoidable. To the former belonged Aquajih, Grey, Haldane and most of the members of the Liberal cabinet. The pessimists belonged primarily to the Conservative politicians like primarily to the Conservative politicians like me to know his opinion, and leading soldiers like Lord Roberts, who preached the necessity for the introduction of compulsory service.

During my time in office, however, this party refrained from all lattacks and maintained both personally and politically a friendly attilude, but our naval policy and our conduct in 1905, 1908 and 1911 had created among them a belief that some day it would come to war. The first school, exactly as among us in Germany, is now accused of foolishness and shortsightedness.

while the second is regarded as the prophets.

Even more striking is Prince Lichnowsky's discussion of the Balkan situation in its bearing on the present war. In it, to quote the New York World, the prince laid the chief blame for the conflict on Count Berchtold's attempt to force a revision in the Austro-Hungarian interest of the Balkan settlement as embodied in the treaty of Bucharest. He absolved Great Britain of any part in forcing the issue. To quote a cable from London:

The prince goes on to describe that during the Balkan was there were two policies open to Germany—either to act as imparial mediators and seek a stable settlement in accordance with the wishes of the Balkan policy. He recommended the former, but Wilhelmstrasse determined on the latter. Austria wished to keep Serbia from the Adriatic. Italy withdeep prevent the Greeks Serbs; France supported the Greeks.

Germany had no motive whatever for supporting her allies, and thus bringing about a bad settlement, except the desire to consolidate what, in Prince Liehnowsky's opinion, was a palpably worthless alliance

"... But we, instead of taking up a position analogous to that of England, invariable exposued the standpoint of Vienna. Count exposured the standpoint of Vienna Count I was his second. My task consisted in supporting his proposals at all points. We accepted and supported the views of Austria and Italy.

"Sir Edward Grey, on the other hand, practically never sided with Russia or France; usually, he took the side of our group so as not to provide any pretext for confliet. That pretext was supplied later by the dead archduke."

### SOCIAL WORKERS STAND FOR PROHIBITION

HE question of ratification of the Prohibition amendment to the federal constitution is taking precedence over all other legislative matters in Massachusetts this year. As in other states that have already ratified the amendment, the liquor interests are countering with a bill for a referendum at the next general election. Their main arguments are based upon "states' rights," but as many of the men speaking to the question have previously been before this same legislature advocating federal labor legislation, the strength of their arguments is somewhat vitiated. An unsigned printed card is being circulated through some parts of the state which attempts to arouse religious prejudice by stating that prohibition is another name for "A, P, A.ism."

The constructive social forces have all lined up on the side of prohibition, the leading physicians, the granges, the federations of churches and of teachers, as well as many other groups. The Women's Christian Temperance Union presented the committee with a fifth of a mile of signatures rolled on a spindle. and not the least dramatic moment was reached when Ignatius McNulty, representing the Marble Workers' Union, denied that organized labor as a body was against national prohibition and asserted that when Samuel Gompers spoke before Congress he represented Samuel Gompers alone and not the American Federation of Labor.

Even the social welfare agencies have broken through their time-honored silence on the subject. The eighteen agencies which make up the League for Preventive Work, together with other cooperating agencies, held a two-session conference on the social significance of alcohol, at which for the first time the facts as known through their work with families were given to the public. Robert W. Kelso, secretary of the State Board of Charity, summed up the findings and showed that Massachusetts is expending as a minimum from the public purse and through private incorporated charities ten million dollars a year to care for the wreckage from drink, as against three million dollars received through license fees. The findings of the conference were held to be so significant that they are to be published by the league for immediate legislative use.

# WHERE AMERICAN LABOR STANDS

THE National Civic Federation gave a luncheon last Saturday in honor of the labor delegation sent over to this country by the British government. Samuel Gompers presided, and speeches were made by W. A. Appleton, secretary-general of the British Federation of Trade Unions, and Joshua Butterworth, a member of the Associated Shipwights' Society. Crawford Vaughan, former premier of South Australia, also spoke.

Mr. Appleton brought word of an alince of employers and employes in Great Britain recently effected along the lines of the National Civic Federation, and told of the cordial reception given the British delegation by labor

bodies throughout America,

Mr. Butterworth told of the efforts put forward by British labor in supplying ships, munitions and equipment no less than in the field, and of the voluntary and governmental machinery set up to deal with questions in the war industries. The labor unions of England had kept faith with the government in the matter of strikes.

At the morning session, Mr. Gompers repeated that the American Federation of Labor would have been represented at the inter-allied labor conference called in London in February by the British Labour Party and the British Labour Congress had the invitation reached Washington in time, but he did not refer to the inter-allied delegation which the conference proposed to send to America. On the other hand, he stated that an American labor delegation would sail for England and France. and re-affirmed that the American Federation of Labor would not take part in any inter-belligerent conference while the war is on.

"Let me say," declared Mr. Gompers.

that the executive council of the American Federation of Labor, applementary to the declaration of the American Federation of Labor in convention assembled, declared that the labor movement of America will not be represented in any conference during the war in which the representatives of the enemy countries are participating.

We are going to fight and stand true behind the government and the President of the United States and our allies until the German militarish has at least learned the meaning of humility and justice, and when a victorious peace for democracy shall have been accomplished there will be none in the democratized people of Germany, the hand of fellowship and friendship more readily and friendly and cordially than the men and women in the organized labor movement of America. The Civic Federation meeting passed a resolution asking the League for National Unity to appoint a committee to outline "a solid basis for industrial reconstruction as will be necessary after the war."

It had been announced that preceding the luncheon the morning session would be given over to "consideration of after-the-war problems and a program for making a study of these questions." The only paper on these subjects was that of the editor of the SURVEY, who outlined the forces manifesting themselves in the British labor movement in the industrial field, in the political field and in the international field.

Thereafter for an hour and threequarters he was the subject of heated personal attack on the part of Mr. Gompers, who, as president of the American Federation of Labor, charged him with ignoring the accomplishments of Anerican labor; and by William English Walling, who took up the articles published in the Suxury of March 2 and March 9 and denounced them as an insidious pro-German pacifies propaganda; and the British labor offensive as a scheme for knuckling in to Prussianism in the same way that the Bolsheviki had knuckled in in the East.

By a coincidence, Saturday's papers carried a cablegram from London quoting Arthur Henderson, secretary of the British Labour Party, calling on his fellow-countrymen to stand out against an "unclean peace." He said, in addressing a woman suffrage celebration:

I have been imagining during the last few days, having regard to what has taken place in Russia, that some German emissary might come along and say: "Why do we fight? Why cannot we settle it? We are prepared to come to a compromise with you regarding colonies, and we are prepared to make considerable concessions to France with reference to Alsace-Lorraine."

That would be a cynical peace containing the seeds of future wars. It would not be a clean peace, and it would not be an honorable peace. It would be the desertion of Russia; and the women of this country must stand against it like fiint.

We are anxious for peace, and the sooner it comes the better. But let me say it must be a peace consistent with the ideals for which we entered the war.

No one deplores more than I the collapse of Russia, but I believe that that collapse does not represent the majority of the Russian people.

# CHRISTIANITY AND SOCIAL RELATIONS

THE Philadelphia Yearly Meeting of Friends a year ago appointed a Social Order Committee to consider "the present-day application of efforts to promote the kingdom of God on earth, particularly as it relates to social, political and industrial conditions." This committee has formulated and prepared a set of principles interpreting Christian responsibility as embracing

not only personal integrity and the maintenance of high ethical standards in business and home conduct, but all aspects of modern social and industrial

These principles are followed by the recommendation of practical, initial steps towards a partial realization of the ideals set forth as follows:

- 1. A sympathetic study of the conditions of labor and the causes of poverty, with a desire on the part of employers of labor, whether in office, industry, or household, to learn whether the life of their employes be only a monotonous struggle for existence or whether their income and circumstances be such as to afford healthful recreation and adequate means for mental and spiritual development.
- Investigation of schemes for the democratization of industry, for the replacement of competition by cooperation, and of all methods by which an equitable distribution of the products of industry may be achieved.
- 3. The making of investments in the spirit of service rather than of self-interest, investigating, as far as possible, the industrial conditions lying back of securities and favoring those investments that have a social motive, even if returning a low rate of interest.
- 4. A reexamination of the Quaker testimony for simplicity in the light of modern conditions. This may involve, for some, the voluntary renunciation of the acquisition of wealth in the interests of brotherhood; for others, the application of surplus to remedial rather than to ameliorative measures for social readjustment; and for all, an avoidance of expenditure which may give rise to ency or unworthy emulation.
- The daily practice toward all of that sympathy and good-will, which is more than mere indiscriminate kindliness, involving, as it often will, risks to personal security and case that can be taken only in the spirit of faith and love.

### MILL OWNERS' REPORT AGAINST SHORT DAY

IN a report indicating that a reduction in hours in the cotton industry has been accompanied by a proportional reduction in output, the National Industrial Conference Board has given out the first of a series of reports on an investigation of the experience of manufacturers in several major industries with different hours of work

The Industrial Conference Board is a federation of employers' associations, including, in addition to the cotton manufacturers' associations, the National Association of Manufacturers, the National Freetors' Association, the National Founders' Association, the Metal Trades Association, the Metal Trades Association, and several other of the more prominent associations of employers.

The inquiry reported covered 166 establishments, employing 116,000 workers; 109 of these, with 82,000 workers, were in the North, and 57, with over 34,000 workers, were in the South. The report says that in the northern mills 94 per cent of the employes were in establishments where the hours were 54 or 55 per week; in the southern mills, 78 per cent were in establishments where the hours were 60 or over per week. One hundred and eight out of the one hundred and nine northern mills had a Saturday half-holiday, a privilege enjoyed by only seven out of the forty-three southern mills reporting on this point.

The sources of information, it is stated, are in part the answers to inquiries addressed to employers, and in part "field investigation covering both employers and representatives of labor." Whatever was secured from the representatives of labor is not made known. The report contains nothing but a brief quotation from a union official on the relative merits of day work and piece work.

northern establishments, Seventy with 73,000 employes, gave figures of production before and after a reduction in working hours. Of these only six es-tablishments, with 5,600 employes, re-ported that output had been maintained; sixty-four establishments with over 43,000 employes reported a decrease in output. Of twenty southern mills reporting on reduction in output, four with 1,700 employes reported that their output had been maintained when the hours per week were reduced from 651/2 to 60. Sixteen establishments, with 13,000 employes, reported a decrease in output when the hours were reduced from between 63 and 64 to 59.

The report lays stress on the automatic character of cotton mill work. The pace is set by the machine rather than by the operative; consequently a reduction in hours cannot have the same effect upon output that has occurred in industries where the dependence is upon the skill or the speed of the operative rather than upon the machine. It is pointed out also that the United States census of manufactures for 1914 showed that the average annual earnings of workers in cotton mills "were 33 per cent less than the average for workers in 23 leading industries."

A more careful account is given of the conditions prevailing in the six northern mills, where production was maintained after a reduction in hours, than for the other establishments where production fell off. It is pointed out that these mills either were small or were manufacturing "special lines of product," or radical changes had taken place in the management so as to invalidate, in the opinion of the investigators, any conclusions that might be drawn from the fact that production was maintained. This evidence, the report states, is "not only limited, but inconclusive."

With regard to the sixty-four establishments reporting a decrease in output, as an accompaniment of reduction in hours, no statement is made as to

# Easter Apparel for Women and Misses

James McCutcheon & Co. are showing unusually attractive displays of Easter Apparel for Women and Misses. The season's newest Cotton, Woolen,

and Silk fabrics are portrayed in many different models of Coats, Suits, Dresses, Skirts and Blouses.

Daytime Dresses— \$28.75 to 87.50 Cotton Frocks— \$12.95 to 47.50

whether conditions before and after the change were the same. It is impossible to discover whether the number or the character of employes remained the same; whether the management was efficient or otherwise, or whether there were changes in management. In this case, says the report, "the preponderance of evidence is so marked that extended analysis of the data is unnecessary." The report states further that where figures were obtained for a period immediately before and immediately after the change in hours, "the uniformity with which the figures thus obtained indicated a loss in output . . . taken in connection with the marked unanimity of opinions submitted by manufacturers . . made nice allowances for minor factors unnecessary."

Several interesting lines of possible investigation mentioned in the report are not followed up. For example, it is stated that in the southern mills, where longer hours prevail, "the margin of lost time appears to be considerably larger." There is no discussion of the bearing this may have upon labor turn-

over and cost, nor is it stated whether or not the reaction of the longer or the shorter working day upon these factors is considered important.

There is an interesting section on the health of the workers in which emphasis is laid upon the lack of information. It is pointed out that "apparently no comprehensive records of sickness among cotton mill workers in this country are to be had. Few companies keep absence records of any kind, and of those which do only a very limited number record the causes of absence," Whether this revelation of the failure of cotton mill employers to keep such ordinary records as have become commonplaces in mills progressively managed, tends in any way to invalidate the figures furnished by these mills as to output, the report does not state. Figures are given showing a high tuberculosis death rate of cotton mill employes and a low accident rate. Nothing is said in the report about the effect upon health of the extreme heat. combined with the excessive humidity. which is typical of cotton mills. The report concludes "it would be wholly unscientific" to urge any conclusion as to the cause of ill health among cotton mill workers without taking into account many factors outside of the mill.

In a later report, it is intended, we are told, "to discuss the relationship between accidents and fatigue in industry."

# A DEMONSTRATION OF RACE ADJUSTMENT

EAST ST. LOUIS stands out among the events which during the past year have attracted world-wide attention to the Negro problem in the United States. The National League on Urban Conditions among Negroes has decided for that reason to choose it for a proof that the problem of race adjustment is soluble. The plan is to let interested white and colored citizens in St, Louis and East St, Louis work out their own demonstration with the aid of the machinery and the financial support of the national organization.

The work is at present planned for the year 1918 only, in the hope that by the end of the year permanent forces will have been set in motion which will not only counteract the unfavorable impression held all over the country of local conditions, but contribute to a proper understanding generally of the means which must be employed to secure protection against similar occur-rences for the future. The plan provides for

1. The getting together of a representafrom the entire St. Louis district to direct the work:

2. Representation of all the larger agencies among the colored people and working with colored people;
3. A trained executive in charge.

# WANTED

200 women experienced in case work. Salary \$1,000 to \$1,200.

25 industrial investigators, public service. Must be experienced, ined in statistics and factory investigation. Salary \$1,200 to \$2,000.

National Social Workers' Exchange Mrs. Edith Shatto King, Mgr. 130 East 22 Street New York City

4. A rapid survey of conditions and agencies among Negroes in the district;
5. Development of a program aiming at
a. securing a decent home for every

Negro who wants one; b. making employment more regular; c. securing the same degree of attention

to Negroes as is given to whites on the part of public agencies; d. cooperation of public officials and pri-

vate agencies on both sides of the river in the solution of their common problem.

It is expected that there will result a permanent organization covering the whole district, maintained in large part by the Negroes themselves for their own welfare and assisted by representatives of the employers and of public and private social agencies. A regular means will also be created, it is hoped, of cooperation between real estate owners and colored organizations to settle the problems which often arise from the occupancy of property by colored people.

This work is to be financed by the league with a special fund of \$3,200, of which \$1,700 has so far been contributed from outside St. Louis. A series of meetings was started on Sunday.

## TENNESSEE MOBILIZING FOR LAW AND ORDER

HE forces of King Alcohol have been routed in Tennessee after a long, hard war. Now a new fight has been started. It is against the Czar of lawlessness, against lynch law. That this is taking place has been shown by a meeting of about 300 leading white citizens on Sunday, February 24, at the Wilson Auditorium of the Nashville Y. M. C. A. and by a delegation of nearly 400 colored citizens who presented a petition to Governor Rve at a dramatic hearing at the State Capitol on Wednesday, February 20,

The white citizens at their meeting organized a Law and Order League. which has since been incorporated. The organization included in its charter membership men of the foremost rank.

The meeting on the twenty-fourth was the sequel of a preceding conference on February 17, which conference had appointed a committee to draft resolutions and prepare a plan of organization that the organization is one for

vigorous action as shown by its announced purposes:

To hring about, by a campaign of education and by all other lawful means, the development of a sound public sentiment that will lead to the prompt and certain enforce-ment of existing laws for the prevention and punishment of crime.

To aid in the preparation and enactment of whatever new laws may be necessary for securing early and effective punishment of erime and the maintenance of law and order.

To create and arouse a more active public sentiment in the young, and old in favor of enforcement of law and to comhat the evils of lawlessness.

To cultivate a spirit of higher respect for the majesty of the law, for the officers hy whom and the agencies by which it is administered, and to uphold the officers of the law in the proper performance of their du-

To hold public meetings, prepare and dis-tribute literature, provide lecturers, and to urge the pulpit, press and schools to stress the necessity for the suppression of erime and the maintenance of law and order, to the end the maintenance of law and order, to the end that mob violence and at least the more se-rious erimes shall be condemned by public sentiment and certainly punished by the es-sablished processes of the law.

That these statements are plans for action and of deliberate intentions to suppress mob violence is shown further by the outspoken resolutions.

We protest with all the emphasis we can command against arrocities that are too barbarie to be recised. We condemn any official who may be held responsible for the overthrow or non-enforcement of law. But we are forced to confess that the silence of the best people in the presence of this disgrapple with it have helped to produce the conditions out of which have sprung lawless and frenzied mobs and timid officers of the law. We believe that the overwhelming sentiment of the citizens of this community and state is against this betraval of law and order, but it needs to be organized into definite

These resolutions also noted "with satisfaction and gratitude" the absence of lynching in Nashville for a quarter of a century. They attributed the fact "in part to the law-abiding and faithful Negro leaders who have discouraged crime in their own race.'

The Negro citizens had shown their spirit against lynch law on a day preceding the law and order meeting in the petition and protest to the governor of the state. Headed by the Hon. I. C. Napier, ex-register of the United States Treasury, and a citizen of Nashville. they had presented their case to the chief executive.

The colored speakers, writes George E. Haynes, educational secretary of the National League on Urban Conditions among Negroes and professor of social science at Fisk University, to whom we owe the preceding information, have held conferences and arranged to meet representatives of the new Law and Order League to consider plans of cooperative action.

# THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

ASSOCIATES INC.

### KEY

If you know the name of the agency or organization, turn direct to the list-ings (3d column) for address, corre-sponding officer, etc. [They are ar-ranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject clas-sifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but ofor those seeking information, but of-fers an opportunity for you to share spiritedly and seriously in your com-munity or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

### WARTIME SERVICE

"HOW the SURVEY can serve" was the subject of an informal conference held early in April, in our library, to which we asked the executives of perhaps twenty national social service organizations. The conference was a unit in feeling that as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the SURVEX was at the threshold of an opportunity for service such as has seldom come to an educational enterbrice

The development of this directory is The acveropment of this arctory is one of several steps in carrying out this commission. The executives of these organizations will arroor ques-tions or offer counsel to individuals and local organizations in adjusting their work to emergent warine demands.

Listings \$3 a month for eard of five lines (in-luding one listing in SUBJECT INDEX by full same and three by initials), fifty cents a month for such additional line. No contracts for less than hree months. Additional charge of \$1 for each hange of copy during three-month period.

Reading jits on women's vocations.

# Representative Plays | The Social Plays of American Dramatists

Edited, with a general introduction and historical comments to each play,

By MONTROSE J. MOSES. Net, \$3.00 per volume

The first volume (1765-1819) just published, complete in itself, Containing full authentic texts of the most important and distinctive plays by American Playwrights from 1765 to the Present

from 1765 to the rresent.

It has been the Editor's object so to arrange the successive order of these plays that the render may not only be able to judge the change in stagecraft and technique, but may also note the change in social idea and in historical attitude towards certain subjects.

# Arthur Wing Pinero

preface to each play,

By CLAYTON HAMILTON. Net, \$2.00 per volume Authorized Library Edition to be in four volumes. Volume I, containing the Second Mrs. Tanqueray and The Notorlous Mrs. Ebbsmith, just Issued; other volumes in preparation.

Sir Arthur Pinero has been called "the playwright's playwright" because of the perfection of his craftsman-ship. For more than a quarter of a century he has been regarded as the leader among living English dra-

# A BOOK FOR SHAKESPEARE PLAYS AND PAGEANTS

By O. L. HATCHER, Ph.D.

Profusely illustrated with nearly 200 portraits and pictures as well as the music for the songe and dances. A Treasury of Elizabethan and Shakespearean Detail for Producers, Actors, Artists and Students, describing Elizabethan Life and Customs, the Costumes, Sports, Buildings, Court Festivities, the Stage and Drama, the Dances,

the Songs and Music of the Perlod. A new and important addition to the resources of all readers and lovers of Shakespeare, and of all who wish to present scenes from the plays, or to take part in Shakespearean or Elizabethan spectacles or pageants. Doctor Hatcher's book brings together in one volume rare material and pictures difficult of access, which have

never before been offered in a single, moderately priced volume.

# THE STORY OF THE SCOTS STAGE By ROBB LAWSON.

In this volume is told in a popular way the story of how the Scots established drama in their own country. Incidentally the Scots Stage presents a treasure trove of quaint happenings and queer stories about both plays and players.

# FIVE RUSSIAN PLAYS

With one from the Ukrainian. Translated from the originals with an introduction by C. E. Bechhofer. Net, \$1-25

These six plays, including two by Nicholas Eurginov, two by Anton Chekov, and one each from the pens of Denis von Vizin and Lesya Ukrainka.

# TOWARDS A NEW THEATRE

By EDWARD GORDON CRAIG. Net. \$7.00

Forty designs for stage scenes with critical notes by the inventor

The Erening Post says: "The ideas which Mr. Craig is presenting through his new School of Dramatic Art are making themselves felt in the whole theatrical world. That he had a real message to give was first recognized on the Continent. Just what he stands for is revealed in this handsome volume."

# PRACTICAL STAGE DIRECTING FOR AMATEURS By EMERSON TAYLOR.

A complete Compendium of Stage Requirements, Definitions, Do's and Don'ts, and the A B C's for Beginners, both in Acting and Stage-Managing; including the Technique of Voice, Pause, Polse, and Action.

No matter how little or how much experience you may have had, you cannot help but profit by this book. Its

clear expression and its somewhat humorous criticism will further reward you,

# ENGLISH DRAMA

By FELIX E. SCHELLING

Net, \$1.75

He tells fully the story of English Drama from its beginnings in the Miracle-Play up to the separation of the actable play from the purely literary play, in the days of Sheridan. A concluding chapter sketches the course of the Drama sluce that time in outline.

# MINOR ELIZABETHAN DRAMA

(Two Volumes)

Vol. I. Tragedy. Gorboduc, Kyd's Spanish Tragedy, Davld and Bethsale, and Arden of Feversham. Vol. II. Comedy. Ralph Roister Doister, Peele's Old Wires' Take, Greene's Friar Bacon and Friar Bungay, etc. Both vouces edited with an Introduction by Prof. Transwara, of Columbia University. Everyman's Library, per vol., cloth, net, 60 cents; leather, net, \$1.25.

Specially designed to illustrate the tendencies in the beginning of the English drams. Thus in the first rout more "Gorbedus" represents the tragedy on the classical model of Sences, "Arden of Feversham" the new spirit of realism, Kyd's "Spanish Tragedy" the blood-and-thunder melodrams which Marlowe made poetical and Shakespeare traget. The second volume gives a similarly representative voloce of Elizabethan connecties.

# SURVEY

na 1-12, 14-26, T1: 45

This issue consists of 64 pages.

Regular section 32 pages: Belgian section 32 pages.

SHOULD the German offensive shift from the juncture of the British and French armies to its old objective the channel ports—then the strip that remains of free Belgium once again would be put in jeopardy. How Belgian soldiers and civilians have stood their ground in their sector next the British and the French, and how the American Red Cross has for six months helped build up morale and well-being among them is told in a special Belgian supplement to this week's SURVEY.

# On the Western Front

EKE the Red Cross and other American workers in the devastated region caught by workers in the devastated region caught by the German drive? What plans had they to help in such an emergency? What has all the Red Cross work on the western front amounted to, when all is said and done, in helping build up resistance to the great German offensive? Has it been more than a distraction?

In the area liberated one year ago this month, and now the field of fresh fighting, the Germans' commanders brought the people of certain neighborhoods together at central towns; the able-bodied were deported; women and children, the old and feeble were left behind. Houses, barns, orchards, agricultural machinery were wrecked throughout the entire area. Throughout the summer, various American activities were set going to care for the ininisties, as the people are called who lived on in the district—and the imigrés—the refugees who had come back. By early fall the American Red Cross had created a Bureau of Reconstruction and Relief for the entire war zone, which it put in charge of Edward Eryre Hunt, one of Mr. Holover's relief workers in Belgium.

Regional warehouses were opened at strategic points near the lines at Soissons, Noyon, Ham and Peronne; grants made to scores of French and other œuvres, and local committees created. A children's dispensary and hospital was opened at Nesle by the Red Cross children's bureau; the American Fund for French Wounded inaugurated its broad-gauge neighborhood work at Blerancourt; the Smith College Unit began work in a group of villages about Grecourt, the Secours d'Urgence opened workrooms at Rove, and so on. The English Quakers carried over the methods and experience of their work in the Marne and the Meuse, and in cooperation with the American Friends Unit, set going a work of rehabilitation in nine villages near Ham-putting on roofs, opening wells, plowing fields, and the like. The engineering department of the American Red Cross provided elementary shelter in three villages, Croix-Molignaux, Matigny and Y. All this, in addition to the large-scale work in plowing undertaken by the French department of agriculture and in barrack building by the ministry of the interior.

Up to Tuesday the bulletins showed that Peronne, Neale and Ham had already fallen into the hands of the Germans. A cable on March 24 told of a message received at Paris by Homer Folks, head of the Department of Givil Affairs of the American Red Cross, from Mr. Hunt, indicating that the Smith College Unit, the Quakers, and the other Red Cross organizations had moved back and were safe.

Other cables told of more than their own safety-of the

part which the Americans were playing in the evacuation of civilians. For, while the work of repair and crop planting has been wrecked again, for so far as the battle zone drops back. unquestionably the French have endeavored to bring the entire civilian population to safety. As early as last January the Red Cross in Paris had batteries of camions stocked with blankets, medicines, food, to rush to any point on the battlefront where a new stream of refugees might originate. Interdepartment plans had been worked out so that the whole transportation service of the Red Cross, the stores in its regional warehouses and at Paris and its staff resources, could be brought to bear at once. Moreover, beginning last December, the Red Cross Bureau of Refugees, of which Edward T. Devine is chief, had undertaken to organize the work of placing repatries coming through Switzerland and Evian. The staff engaged in this work of placement would be available at the distribution end of the new stream of refugees from the Somme; just as the Bureau of Reconstruction and Relief with its warehouses, motors and district agents would function at the source. That the organized system of the Red Cross and the practical help of the American men and women in the devastated region has counted in succoring these twice fugitives of the Somme is unquestioned. More than that, this prompt evacuation of civilians will have been of immediate aid in clearing the ground for the allied armies.

But there are other elements of American help which have counted from one end of the western front to the other. On February 23, Signor Orlando, the Italian premier, speaking before the Italian Chamber, of the revictualing of the country, said that the necessary quantity of corn was assured for the month of March. He warmly thanked the allied powers who, in order to provide for Italy's necessities, had reduced their own stock of corn. Insofar as the Italian front as a whole has held solidly since December, and insofar as the food situation in Italy has been essential to it, the American government, through its representatives in Paris, and the American Red Cross have contributed to that result.

In France, not one but a dozen army commanders have spoken of the refreshment of spirit and heightened morale which not only the presence of American troops but the service of the Y. M. C. A. secretaries and the Red Cross canteens and rest stations on the lines of communication have meant in giving new edge to the armies of France. Insofar as the British army has put its full force into its own great span of the front, one thing which has enabled it to do so is the sector held by the small Belgian army; and one factor in its so holding has been the work of the American Red Cross.

# Defective Nutrition and the Standard of Living

By Frank A. Manny

FORMERLY OF THE NEW YORK ASSOCIATION FOR IMPROVING THE CONDITION OF THE POOR

AGE statistics, showing the proportion of any given population which receives less than can be computed as necessary for the maintenance of health and physical efficiency, often fail to produce an impression upon the public mind. Thus the statement of F. H. Streightoff that in 1915 one-half of the married men in New York were receiving less than \$15 a week while \$17 was the minimum requirement for the family's subsistence, though generally accepted, was not heeded. Even more familiar is the study of the standard of living in New York city by Robert C. Chapin, who some years previously showed that among families with incomes between \$600 and \$1000, 24 per cent were underfed, 43 per cent underclothed, 53 per cent overcrowded and 7 per cent suffering from a combination of all these evils. But it required the direct emotional appeal of known suffering to secure more than passing attention for the obvious discrepancy between incomes and necessary family expenditures. Even among the physicians and social workers of New York many were not aroused to the seriousness of the situation until the city's Bureau of Child Hygiene reported recently that between 12 and 15 per cent of the school children are underfed.

In order to secure a record free from the danger of error which must always inhere in a general presentment of facts,

# Be Strong and Healthy

Good Food Habits are Essential to Health

> Drisk al least Iwe cups of milk every day, Lea freely of Bread or Cereal at every meal. Eat some Vegetable every day. Do not eat Sweets except at the end of a meal. Drisk at loast is cups of Water every day. Do not drisk Coffee or Tea at all. Eat regularly, three times a day. Do not eat between meal—except an occasional hunchron half way between two hearty meals. Eat slowly—three food throughly.

One of the food charts issued by the Association for Improving the Condition of the Poor in New York city in its campaign for better child nutrition. the present writer recently undertook a detailed and intimate study of the health and nutrition conditions among the pupils or two schools in the Gramercy district of New York city. The children were classified on the basis of the Dunfermline scale which places each child in one of four nutrition grades: I, superior condition; II, passable condition; III, requiring supervision; IV, requiring medical treatment

It was found that of the 2,535 children examined with a view to their classification, the first two grades included each approximately one-third of the total, and the remaining third was divided between the other two.

The height and weight measurements of the several groups were then studied, and it was found that there were three distinct levels corresponding to the three larger nutrition grades (III and IV, containing one-third of the whole, being in this connection taken together). The average for the defective nutrition cases fell about as far below the "passable" group as the latter fell below the group tabulated as being in "superior" condition. A comparison of these averages with the results of studies made elsewhere showed a close coincidence. The height and weight line for the medium group was practically the same as that ascertained by the most extensive study made which forms the basis for the Boas-Burk tables of weight and height for American children. The weights and measurements of the superior grade were found to follow very closely the average of over 30,000 children attending leading private schools in New York city and Chicago which have been tabulated by Prof. Bird T. Baldwin.

It would seem then that in • typical industrial district of the city, by no means the worst, a third of the children at various ages approximate closely in height and weight to those whose parents can afford to pay tuition rates at private schools which often, for a single child, equal nearly one-half the average income of the majority of families in the city.

Another third represents the average of American children, while the remaining third is seriously underdeveloped—in many cases several years below the measurements proper to their ages under a reasonable standard of living. This shows a waste of physical efficiency and health which even the most elementary policy of human conservation would have to stop. If we adopt for our standard not the measurements of the "superior" one-third, but the average for the largest number of American children, it will be seen that one-third of the pupils examined require a change of conditions in order to rise to this level.

This statement is made with due regard for differences in rac and in particular families of limited capacity of growth. There are no doubt many children whom no nutritional or environmental changes will promote into one of the two superior measurement groups. Nevertheless, considerable experience is now available from well conducted summer camps, all-the-year stations and from other special situations in which conditions of feeding, sleeping, exercises, etc., are carefully supervised, to prove that the growth of the majority of stunted children can be promoted with almost startling rapidity. The weight charts of the boys in truant schools, for instance, show

almost perpendicular advances as soon as a chance for normal growth is afforded.

The studies of Dr. C. Ward Crampton and others have shown that there is a direct relationship between weight and height and the chronological age at which sexual maturity is reached. As Axel Key, the Danish anthropometrist, has stated, "Want prolongs the period of feeble growth preceding puberty." The undersized and undernourished children are usually delayed in reaching the normal sex development attained at a given age by children of more favorable living conditions. In many cases the difference in time amounts to four or five years.

Most of us have known some child, small for his age, who was making remarkable progress in other ways. Usually this seeming incongruity is accentuated by contrast with larger but older children with whom he is associated. Despite these exceptions, however, there is good ground for the assumption that during the growing period the taller and heavier children at each age have the advantage also in every other respect. In the two schools studied, the records of promotion and attendance were compared with the results of the nutrition grading, and it was found that the members of the superior grades also had a decided superiority in these other respects.

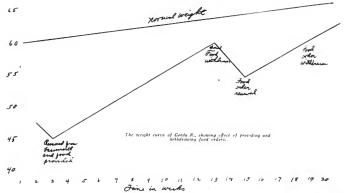

Possibly no section of this study was more suggestive than that which concerned the relation between nutrition conditions and size of family. Inquiry showed that the families of the children who were undernourished and underdeveloped averaged 20 per cent more children than did those of "superior" condition. In comparing only the families of native-born children, this difference amounted to more than 30 per cent. The medium third in each case belonged to families averaging a mean number of children. Similar results were obtained by a survey of cases under the care of the Bellevue Nutrition Clinic in 1917 which established the fact that the number of children in the family tended to be in inverse ratio to the degree of improvement made in weight. It may be remarked in this connection that of several hundred names of school children examined in connection with our study which were

# THE RACE FOR LIFE

One of the food charts issued by the Association for Improving the Condition of the Poor in New York city in its campaign for better child nutrition,

submitted to the Social Service Exchange (the clearing house of New York's relief organizations and various clinics and city departments) those known to the exchange as members of dependent families averaged one more child in the family than

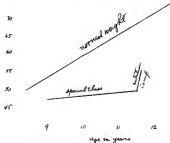

The weight curve of George T., showing remarkable growth during four weeks' detention at the truant shoot.

those not known to it. There is, of course, nothing new in figures such as these which merely substantiate the findings of Chapin and others that the families which have the most mouths to feed are responsible for the greatest amount of defective nutrition.

The nutrition statistics in New York city schools for 1917 showed fewer children in the lowest nutrition grade than had been found during the preceding year. This was supposed at first to show that living conditions in the city had improved during 1917. This interpretation did not account, however, for the fact that there had been an even more marked reduction in the number who had been rated as "superior" in nutrition. A similar reduction in both the highest and lowest nutrition grades was reported throughout England in the years 1915 and 1916. Many of the poorest families are receiving increased incomes on account of allowances to the families of soldiers, reduced periods of unemployment and possibilities of work for a larger number of the members of the family, as well as increased wages. On the other hand, thousands of families which have been able to live fairly well up to the present time are now unable to make both ends meet. Reports from Germany for 1915 showed that in certain cities, as Chemnitz, the loss in weight among school children was more evident in the families of the small salaried classes than it was in those of the working classes.

When the families were studied with reference to place of birth and nationality, it was found that the best conditions of nutrition belonged to native-born children of foreign-born parents—over one-half of those examined—and the worst conditions to the children of native parents—about one-sixth of

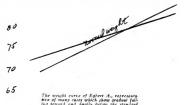

The weight curve of Herbert R., showing steady relative loss during two and a half years of special school care and rapid gain at the mutation camp.

the cases. This bad condition among many American families in some sections of the city is confirmed by the studies of the Bureau of Educational Experiment and those of Dr. Chapin. Of the several race groups, the Jews came nearest to the Americans, followed by the miscellaneous group which included the Irish and British families. The Italians, Austrians and Russians stood higher in the scale; and the best conditions were found among the Germans.

In the clinic study already referred to, which included many of the children in these schools, the greatest improvement was made by Irish-American and American children, while the cases slowest in weight increase were found among the Italians and Jews.

To summarize the problem disclosed by these studies: At least one-third of the school children are so much below normal standards of growth as to call for special nutritional care. Of this group, at least one-third require medical treatment while two-thirds may be expected to respond to improved living conditions, especially as regards feeding. There are now in the public and parochial schools of New York city over a million children. Of other children between two and

115

six—the "pre-school" age— and between six and sixteen but out of school and either at home or at work, there are nearly as many again. This, if the conditions found by our study are at all typical, means that at a moderate estimate there are over half a million children in need of nutritional attention; over half a million children requiring an additional investment on the part of society if they are to be placed upon a plane of reasonable efficiency.

Among the methods of dealing with the emergency features of this situation has been the establishment of nutrition clinics at Bellevue Hospital, the Bowling Green Health Center, Cornell Hospital, the Post Graduate Hospital, and the Brooklyn Association for Improving the Condition of the Poor. All these are intended especially for cases requiring medical attention. The nutrition clinic works upon the fundamental needs and serves as a center of cooperation with the medical or surgical clinic which provides treatment, on this basis, for special defects. At Bellevue, nearly two hundred cases under care for three months averaged more than double the normal increase of weight to be expected at the several ages; and the growth of two-thirds of them, previously subnormal, was increased above the normal average. The interest aroused by the studies made at two schools sufficed, however, to swamp this clinic. Scarcely a beginning has yet been made on the large number of children who would benefit from nutritional care

13

but require no medical attention and who, therefore, could just as well be cared for in food clinics established independently.

Beyond the emergency program lies the need of a wisely organized plan which would bring these nutrition clinics for medical cases and food clinics for non-medical cases into effective cooperation with the school lunch system, the home economics departments of the schools, the open-air classes (as clearing houses and observation stations), the work of the school physicians and nurses, the milk stations, the district nurses and many other social agencies which could help in one way or another to meet this need.

The immediate need is for an emergency program which is commensurate with the size of the problem and does not hinder the investigation of more lasting solutions. The next step is the better coordination of the existing social machinery so that its remedial processes, applied more early in life and covering the want more adequately, may also be preventive and conservatory. But all these measures of relief are social makeshifts compared with the immense work of education and economic readjustment which lies ahead. After all, "what is the matter with the poor is their poverty." And, it may be added, what is the matter with the ignorant is their ignorance. Unless we recognize that defective nutrition in childhood must ultimately be treated as only one aspect of poverty and only one aspect of poverty and only one aspect of ignorance and shape our social program accordingly, food clinics and the remedial work of social agencies may only increase the number of children reared in families too poor or too neglectful to be safely entrusted with the re-production of the race.

# The Shortage of Labor and the Waste of Labor

# By William M. Leiserson

PROFESSOR OF POLITICAL SCIENCE, TOLEDO UNIVERSITY

ROM July, 1915, to April, 1917, when war was declared against Germany, the seven public employment offices of the state of Ohio were registering 28,000 applications for employment every month. This does not mean that so many unemployed persons sought work through the offices each month, because some individuals may have applied several times. But a study of the methods of the offices makes it safe to say that close to 20,000 individual unemployed were registered every month. The period under consideration was a time of general complaint from employers about "shortage of labor." Yet a few undermanned and imperfectly organized employment bureaus in the larger cities were able to find almost 2 per cent of the wage-earners of the state unemployed.

It struck Fred C. Croxton, of the Ohio Institute of Public Efficiency and now federal food administrator of the state, that if the employment offices were improved and extended to cover the state in a compact organization it might be discovered that there were very many more unemployed in Ohio than anybody imagined. The shortage of labor might be more apparent than real, and a business-like organization of the labor market might relieve much of the complaint from employers. He presented his idea to Governor Cox, and the governor appointed him claiman of the Labor and Industrial Relations Committee of the Ohio Defense Council. As chairman he was given authority and funds to establish a comprehensive system of employment bureaus in the state that should deal with the labor shortage.

Mr. Croxton called to his assistance the Industrial Commission's state director of employment offices and put him in immediate charge of the work. Then he enlisted the aid of several other students of employment problems in organizing a system of twenty-one bureaus to cover the whole state with a central office in the capitol at Columbus directing and controlling the entire organization. Within four months after this organization was formed it was registering more than three times as many unemployed as before. This is the record now being maintained when the Ohio employment service is still in its infaucy. It is a conservative estimate, therefore, to say that from 4 to 5 per cent of the workers of Ohio are unemployed for some time every month; for there are fifty-five private labor agencies operating in the state and the public employment offices reach but a portion of the unemployed.

Of the applicants at the public employment offices about a 3,000 a month are now being supplied to the employers and farmers of the state. This leaves from 15,000 to 20,000 for whom no positions are found. The reasons for the failure to find work for all we shall consider presently. At this point we are concerned only with the fact that from 4 to 5 per cent, at least, of the wage-earners of Ohio are unemployed every month, and that a well-organized system of twenty-one employment offices succeeds in putting to work only about two-thirds who apply for employment.

Is this condition peculiar to Ohio, or is it typical of the country as a whole? A glance at reports from public employment offices in thirty states published in the Monthly Review of the United States Bureau of Labor Statistics will show that Ohio's condition stands out only because its labor market is more systematically organized. The presence of a large number of unemployed is noted in every state. Officials of public employment bureaus from all over the country recently met in annual convention in Milwaukee, and with few exceptions they reported that the shortage of labor was caused not by a lack of workers, but by a lack of use of the available supply of labor. From the Far-west comes the statement of the superintendent of the Public Employment Bureau at Portland. Oregon: "I would not feel justified in saying there was a labor shortage in view of the fact that any day between 7 A. M. and 5 P. M. we have from two to four thousand men passing through our rooms investigating what we have to offer in the

And Charles B. Barnes, director of employment in the state of New York and president of the American Association of Public Employment Offices, sums up the situation in these words: "There is plenty of labor in this country to do all the work there is to be done, and there will be plenty of labor

as long as the war lasts, even if it lasts five years. Since my trip west and my contact with labor conditions all over the country I am willing to assert this as a fact the verity of which I was timid before. I thought it was only my personal and necessarily superficial observation of conditions in New York city, which are always abnormal.

If there is all this labor available, then why the insistent cry of shortage of labor from employers everywhere? In the experience of states like New York, Ohio, Wisconsin and California, which have something more than paper organizations for bringing labor supply and demand together with the least delay and waste, we can find an answer to this question.

A contractor building a power plant complained to the Ohio Employment Service that he could not get the labor necessary to complete his work. "How many men do you need regularly from day to day?" he was asked. "About 100," he replied. "How many have you had on the job this year since the work began?" He smiled significantly and said, "Our payroll has had 5,000 names on it so far. They come and go."

A railroad company which was employing women in car shops, round houses and on the sections was asked if it could not get men to do the work. "We got plenty," said the superintendent of the car shop. "Hundreds of them would come almost every night from our employment offices in the East, but they would get a meal and a night's lodging and the next morning most of them would disappear. After a payday practically our whole force would disappear." The round-house foreman added: "The company will pay only twenty cents an hour for the work. I don't like to have the women here. hut they stick, and you can't get men to stay at those wages,' Twenty cents an hour was the rate for common labor in the Middle-west before the European war broke out.

A great steel mill whose agents were scouring the country for labor hired over 100,000 men during 1916. During that time the actual working force averaged about 10,000 employes. "We can't hold them," one of the agents complained.

"There is a constant stream floating in and out."

A farmer wrote to the governor, to the State Defense Council, to county agricultural agents and to employment offices insisting that he must have help if he was to plant and harvest his crops. He offered fifteen dollars and twenty dollars a month with board and could get no one. At the same time, the Ohio employment bureaus were placing almost a thousand farm hands a month at from twenty-five dollars to forty-five dollars. The counties where forty dollars and forty-five dollars prevailed were well supplied with labor. Where less was paid there was constant complaint of shortage. In New Jersey, Commissioner of Labor Bryant recently replied as follows to a complaint that potatoes in Gloucester county were rotting in the ground because of labor shortage: "The State Labor Department is prepared to furnish laborers in Gloucester, or any other county in the state. But the farmers must be prepared to pay them prevailing wages and also to provide for housing them. We placed close to 5,000 men on farms through our employment bureau in September, and probably as many last month. The prevailing wages range from \$2.75 to \$3.75 a day. This is high for this grade of labor, but men are not willing to work for less in the country because they can get it, or much more, in other lines of employment."

A railroad company applied to the Ohio Public Utilities Commission for permission to place an embargo on freight. claiming it could not get the labor to move it. The commission called on the state director of employment for assistance. The director, in conference with the commission and the managers of the railroad, brought out the fact that the company was paying only twenty-five cents an hour, and that the men then employed were preparing to strike for thirty cents. "You can't expect to get men at twenty-five cents an hour with the present cost of living." Mr. Mayhugh, the director, told them. "Raise your rate to thirty cents and I'll get you all the help you want." The rate was raised, the men were supplied, a strike was avoided and no embargo was declared.

Military authorities commandeered the lighting plant of a small city and left the people in darkness. When work was begun to connect the city with a distant power plant, labor could not be secured in the immediate neighborhood. contractors attempted to advertise in the newspapers of other cities for the help needed, but Chambers of Commerce had induced the papers not to accept advertisements for labor to go out of town. Thus a most vital work was crippled while in other cities men were unemployed and held in ignorance of out-of-town opportunities for employment. When the central office of the Ohio employment system learned the facts the branches were immediately informed of the urgent demand for help and within a few days enough men came from the employment offices to rescue the city from darkness.

Just as this is being written, word comes that a very large automobile plant has laid off half of its force. A rubber plant in another city is laying off men and has cut its bonus on the men's wages. Inquiry at many plants in the endeavor to place some of these released workers brings the repeated reply, "We are not putting anyone on now." No doubt other lines of work will have use for these men, but it may be in other cities; it will take time, energy and a good deal of ability to find the other places. Meanwhile this labor goes to waste and employers are short of help.

Instances like the above might be multiplied, but these should be sufficient to show at least a few of the causes for the alleged shortage of labor. Labor is not scarce when many employers turn over their labor force three, four and five times a year. Labor is not scarce when thousands can be secured from employment offices, but they will not stay at twenty cents an hour. Labor is not scarce when one city cannot get necessary help because others conspire with newspapers to keep a large supply walking their streets unemployed. Labor is not scarce when industries for seasonal and other reasons are laying off men and employment offices have difficulty in placing them. Labor is not scarce when thousands are unemployed and refuse to go to work for one reason or another. The supply, at least for the present, seems adequate. Inducements to get the supply to work, however, are not sufficient. and organization to bring the supply promptly in touch with the work is wofully lacking.

However, the plight of American industry is none the less serious because employers can not hold their help, or because men will not accept employment, or because some districts are oversupplied while others are undermanned. Where is the fault, then, and what should be done about it?

In the first place, those farmers and employers who pay the wages that prevailed five and ten years ago have been tapping supplies of labor of lower and lower grade. Today, at twenty cents an hour one can get only those helpless, weak. underfed and inefficient laborers who have no bargaining power whatever, or else the worst kind of hobo labor, the tramps, drunkards, defectives and degenerates. As wages increased for labor generally, the employers who failed to come up with the market-and there are very many such-wert forced to take the worst of these Obviously the results were unsatisfactory. Most of the men would not stay, and most of the rest had to be discharged. That the resort to women to do heavy, common labor has come largely from this class of

employers is the testimony of all intelligent employment agents. But note the danger. If these employers are to be permitted to substitute women at wages that self-respecting laborers cannot live on, they will be creating among the female workers a class of underfied and therefore unwilling and in-efficient workers, corresponding to the unemployable male hobe and floater. Surely this is jumping from the frying pan into the fire and not increasing and building up the labor supply of the nation.

Then there are the employers who do pay prevailing rates of wages, but still cannot hold their help. Investigation here shows that long hours, unsteady employment, unbearable speed, inefficient management or lack of decent housing facilities cause dissatisfaction and quitting. The fact is that the American employer like the American farmer suffers from the wasteful methods brought on by too abundant resources. The farmer had no need to conserve his soil. It was rich and when exhausted there was plenty of new and virgin land. The employer similarly had no need to conserve his labor. Supply was always more than adequate. Immigration from abroad could be depended on to meet any deficiencies of native labor. Training was neglected, for plenty of skilled mechanics were coming over from Europe.

Now when the war has cut off the surplus that the employer was accustomed to, he is slow in acquiring either the inclination or the ability to treat his labor as if it were a precious part of his resources. He has no government colleges and experiment stations to teach him scientific conservation of his labor. His methods of management are still in the main the crude and inefficient ones that prevail when labor is so abundant that it can command little more than its keep. A tendollar-a-week time clerk is considered capable of hiring labor, but buying materials is entrusted only to highly paid experts. Has the time clerk made a mistake in assigning a worker to a certain job? Fire him-there are plenty of others. Is a man dissatisfied? Get rid of him. Can't he get along with his foreman? Discharge him, and of course no other foreman in the plant will be so discourteous as to take him on again. Has work slackened up because an order is finished, material is lacking or machinery has broken down? Lay off your men and save expenses. There will be plenty around when we need them.

It is hard for employers to give up these methods. Hence he cry, "shortage of labor," But it insi't labor that is scarce; only the surplus is lacking. This surplus can never be recreated, for neither post-war conditions nor an enlightened national policy will permit it. The employers only salvation is to adopt more intelligent, economical and humane methods of managing the country's labor supply.

But the first reaction of the employer to the new condition is to blame the worker for his troubles. Attempting to deal with his problems on this theory he makes things worse for himself as well as for the employe. In a city of more than 80,000 population, men were leaving their places as fast as they could get higher wages or what they considered better terms of employment. They found the change either satisfactory or unsatisfactory. If satisfactory, they thought they might do better still if they changed again. If unsatisfactory, they looked for another place. The result was a very large "turn-over" of labor in most of the plants of the city and a steadily increasing wage rate. To meet this problem the employers of the city entered into a combination to refuse to hire any employe who had previously worked in the city unless that employe had a "release" from his former employer. An elaborate system of records was installed at a central office and all the plants were required to report daily the men hired and discharged. If one were hired who had not been released, the central office ordered his immediate dismissal. Within a month after this system had been put in operation many of the best workers in town, home owners and family men, were walking the streets unable to get work, while any floater could come into town and immediately secure employment. The newspapers were full of "help wanted" advertisements, wages for unskilled labor dropped about 15 per cent, strikes were imminent, suit was brought charging the employers with conspiracy, and industrial unrest was rampant.

This, however, is an unusual method. The more common way is illustrated in a call for help against which the Ohio director of employment had to warn his employment offices. "Advertisements have been inserted in papers throughout the state by contractors' representatives," says a circular to the superintendents of all the offices,

that large numbers of men were wanted for three years' work as Newport News, and they have been telling the men that the rate was fifty cents per hour for carpenters with time and a half for over eight hours and Startday afternoon and doubt inne for Sunday. They have reported that the price of loard was five dollars and trenty-rive cents per week. Two shipmens have been made by contractors' representatives from Columbos, and practically all of the men have returned to report unfavorable conditions regarding with the quartermaster in charge of construction, and he advised no one was authorized to offer the terms mentioned above.

The information is that there is no Sunday work, and that the mea re only allowed to work in 'days per were,' this being he case it does not offer very much of an inducement for men to travel this disance for the job. The men who have returned report that the camp conditions are not good, and that private board cannot be obtained except at esorbitant prices.

The contractors, fearing they would be short of labor, sent representatives all over the country to gather a labor supply and the farther these men got from the place of employment the less scrupulous they became in describing the terms and conditions of employment. Such employers never seem to be able to learn from experience. In good times or bad they always suffer from what they call a lack of labor, for these methods never insure an adequate and stable labor supply.

While the federal authorities do not seem to have been directly responsible for these methods and the consequent waste of labor, the New York State Bureau of Employment reports a case in which the government appears a party to methods that are equally wasteful and reprehensible. Says the November bulletin of the New York bureau:

Reports of the scarcity of labor continue to be published, resulting in considerable harm to both employers and employes. ers go from section to section, with a loss of time and carfare, often to be disappointed. The New York city newspapers published (apparently under the authority of the United States Shipping Board) the fact that the Port Newark Terminal shippards were ready to employ 12,000 workers. A specific offer of the State Employment Bureau to furnish a number of men resulted in the discovery that the Port Newark Terminal yards did not need men; that they were daily turning away a great many, and had on their registration lists the names of several thousand available workers. These nowarranted publications cause great loss of time and also loss of opportunity on the workers' part to secure actual positions. Further, they create a great deal of unrest, causing workers to quit their positions because they believe that the scarcity of labor will give them an opportunity to secure a position at a high wage. A great loss of manpower takes place while this hum is going on, and thus the apparent

But how shall the plight of the employer be met? How can the inefficient and wasteful methods of handling labor be eliminated so that the available supply will not only potentially be sufficient to meet the demand, but shall in fact be used by employers to the fullest possible extent? In a succeeding article we propose to discuss the efforts that have been made in this direction, and to point the lessons of this experience as to measures and methods that need to be adopted.

# The Boy, the War and the Harrow

# By Helen Dwight Fisher

FORMERLY CONNECTED WITH THE NATIONAL CHILD LABOR COMMITTEE; NOW WITH THE UNITED STATES BOYS' WORKING RESERVE

The planting season of 1918 is at hand. What part shall boys play in it? President Wilson has already issued a call to the farm, urging young men of sixteen and over "not now permanently employed" to join the United States Boys' Working Reserve; at the same time, he has repeatedly deprecated any lowering of school and labor standards. What the Reserve stands for and how it utilizes the services of boys are described in the following article—EDITON.

HEN the United States Boys' Working Reserve proposed last spring to furnish farmers with boy labor, no one was more doubtful of the proposition than the farmers themselves. It takes a most imaginative farmer to expect any "bunch of city kids" to be of use to him. In fact, when the National Child Labor Committee, at very nearly the same time last spring, sent a questionnaire to grange officers asking if city children were needed on the farms, the negative answers, comprising 62 per cent of the replies, were so emphatic as to be almost caustic. Of course the fact that the committee asked, "Do you need city children in your vicinity?" may have had something to do with the nature of the replies, for most farmers realize that acity child is more of a nuisance than a help on a farm.

At any rate, after a year's experience with the Reserve the farmers seem to have changed their opinion. The manager of a Massachusetts farm in a district where Reserve boys were sent out from a central farm supply camp said that the experiment had accomplished three things:—

- 1. It has given a more or less discouraged group of farmers a new view of their own possibilities and the possibilities of their farms.
- By bringing a supply of seasonal labor when needed, it has enabled the farmer to increase his acreage one-third to one-half, and has insured the proper cultivation of the crops at an expense he can afford.
- 3. It has been one of the most valuable parts of the city boy's education, in that it has given him first-hand experience in production which he could get in no other way.

# A Pennsylvania farmer says:

I'll confess I was skeptical myself, but some of us agreed to take a boy or two and see what happened. Well, we have about 400 here now, and we want another 150 of the same kind right away.

A farmer near Gary, Ind., says:

Some years ago I used fifteen men on that farm and then ten men. Last summer when we used high school boys on that same farm we never used more than 1cn, and we did the same work that had been done hereiofore by fifteen ordinary farm laborers.

- If the skeptical reader feels that all this is too good to be true, let him consider these facts:
- The farmers in most sections felt a decided labor shortage last summer and were so "put to it" to find help that without boy labor they would many of them have lost crops, and they are naturally grateful.
- The United States Boys' Working Reserve includes only boys between sixteen and twenty-one, all of whom pass at least a cursory physical examination, so that they are mature enough and strong enough workmen to be useful.
- 3. Most of them lived in camps last summer under supervision and often under semi-military discipline, with all the advantages of workers whose living and working conditions are regulated. Some thing about farming before being eart to their lobs. Many of them lived in farm supply camps and worked in groups where needed. All this "organization" of the Reserve naturally produced efficiency.
- 4. The boys received wages, sometimes from the state, but usually from the farmers, except when they were working on some special tract of land not in private enterprises, and as the Reserve officers always attempted to ensure the boys a fair return for their labor, they were of course spurred on to effort and achievement.

5. All the boys were likely to be actuated by a patrionic motive because the Reserve emphasizes in its Oath of Service and in its awards of medals the fact that the boys are serving their country by increasing production on the farms. Naturally this idea of service has a strong appeal among boys of Reserve age, many of whom are the production of the

The Reserve not only recruits boys directly itself, it also accepts them through local and state organizations that come up to its standards in regard to age, physical fitness and other respects. Last summer it reached boys of all kinds. One of the most "fashionable" of castern boarding-schools instituted a military farm under the Reserve where the sons of the rich, most of whom did not know a bean from a potato except when served on the table, cultivated a tract of land, laid out and operated their own camp, received some military training, and by way of final achievement added to the school's supply of foodstuffs for the winter. At the same time another kind of boys, wards of a juvenile court, were tasting camp and farm life on the Fox river in Wisconsin-also under the Reserve. Fifty of these boys under the leadership of a Y. M. C. A. worker "tilled a considerable acreage sown in beans and sugarbeets and worked for the farmers in the neighborhood at one dollar a day for older boys and fifty cents a day for younger boys."

The typical Reserve worker about whom the farmers said, "We want more of the same kind," seems to have been the ordinary high school boy who went out under Boy Scout or Y. M. C. A. leaders to camps in farm districts or enlisted in some state juntor army. Individual workers were supplied to farmers as hired hands, but as a rule the supply camp idea seems to have been the most popular and most effective. State machinery provided by legislation last spring to supply farm labor was utilized by the Reserve, in fact its chief work seems to have been the encouragement, unification and support of local agencies organized at our entrance into the war to supply boy farm labov

The Reserve worked our certain standard regulations for boy farm labor but of consist conditions varied in the seval states in carrying them out. Since the Reserve is organized, however, with Federal State Directors in touch with the certral office in the Department of Labor to supervise and control work within each state, there was a surprising amount of uniformity last summer, considering that the scheme and its machinery were new to everyone concerned. A summary of certain conditions is worth while, both as a review of work done and as a suggestion of the problems before the Reserve for the coming season.

The number of boys enrolled in each state varied with the efficiency of the state organizations rather than with the need of the farmers. In New Jersey, where the state itself organized a Junior Industrial Army, so many boys were enrolled that there were more workers than the farmers needed. On the other hand there were states where the farmers were clamoring for more. A report on the New Jersey situation says by way of suggestion, "The recruiting of boys should begin in the early spring, with the understanding that the boys are to hold themselves in readiness for a call to service," that is, they are not to leave their homes until actually needed; "there should be a real labor shortage" before they are sent out; and the "farmers should make definite plans in advance for the use of boy labor."

In most places there seems to have been plenty of work to be done, and the records of stability on the part of the workers are remarkable. In Illinois, of 562 Chicago boys whose work was reported on by farmers, 559 did satisfactory work and only 3 msatisfactory, and the average number of days worked per boy was 87½, or over 14 weeks of 6 working days. In Maine, 700 boys were trained in camp by the state and then sent out under leaders to the farms, and only 6 out of the 700 went home, 4 under discipline and 2 at the request of their parents, while there was just one case of serious illness among the 700. The superintendent of a farm on the Betsy river, Michigan, said of the boys who worked for him:

"The first week or so the boys were not much good. None of them had ever been on a farm before and they didn't know a horse from a cow. But they were quick and eager to learn, and from the start they took a keen interest in learning how to work. Fully 85 per cent of them took this interest from the start and howe maintained it all summer."

Wages varied, of course, with location and work done. In New York the Military Training Commission's Cadet Bureau makes a written agreement with farmers hiring boys and stipulates a wage of \$2 for a day of not more than ten hours. In Maine the state paid the boys a flar rate of \$1 a day, "just as it pays other soldiers," but farmers added to the wage if the boy's work merited ir. In Idaho the boys received 30 cents an hour for harvesting and averaged \$2.23 a day. The \$62 Chicago boys already mentioned averaged \$23.25 a month with board. In Arizona, 120 boys hoed and thinned 2,220

# WHAT SHALL WE DO IN 1918?

The National Child Labor Committee recommends the following program for using boys in farm service:

- That every state and community prepare immediately for the coming spring when the question of using children in farmwork will come up again. Every state should have its machinery for controlling the situation in working order as soon as possible;
- in working order as soon as possible;

  2. That two general principles be laid down for regulating child labor in food production:
  - No boys under 16 shall be sent away from home to work on farms. (No girls under 18 should be sent away from home for farmwork.)
  - 11. Children under 16 shall be used where there is opportunity either on home farms and gardens or in community or school gardens under supervision, but no compulsory education laws shall be relaxed to allow children to work in agriculture even at home.

### SUPERVISION OF CHILDREN AT WORK

All boys between 16 and 21, working either on farms or in industry, should be enrolled in the United States Boys' Working Reserve, Department of Labor, Washington, D. C., to be sure they are at work where they are needed and under proper supervision.

If you have a local or state organization to supervise the work of boys 16 to 21, see that it is affiliated with the U. S. Boys' Working Reserve, so that we may all work together.

If you have no local organization, but know of boys in your vicinity who want a chance to work on farms next summer, communicate immediately with the U. S. Boys' Working Reserve.

Do not allow any boys to be sent away from home to farms unsupervised or without knowing what need there is for their labor, how they are to be housed, what they are to be paid, and what provision is made for their recreation and rest. The United States Boys' Working Reserves investigates and controls all these matters.

Children of school age who may help in food production outside of school should always be supervised in their work unless they are working for their parents.

This will prevent waste of seeds and fertilizer, will teach the children how to raise foodstuffs, and safeguard them from overwork. acres of cotton, 85 acres of melons, and 25 acres of potatoes, and were paid from 15 to 40 cents an hour—for an eight-hour day. The wage question must be considered not only in relation to fairness to the boys but as regards its possible effect on adult wages and the profits of farmers. It caunot be settled except locally because of local differences in living expenses, normal wages-cacle, etc., but each state Reserve director must solve the problem for his locality. The Indiana State Council of Defense has already taken steps in this line by preparing return mailing-cards on which the farmer may state how much help he needs, when, and what he can pay for it, so that there will be no doubt what Indiana boys can fairly earn next season.

Hours of labor also vary necessarily with locality. A New York farm cadet cannot work more than ten hours a day. The Reserve itself in its requirements for qualification for insignia in the agricultural unit fixes eight hours as the working day. But W. E. Hall, national director of the Reserve, pointed out last summer that to demand an eight-hour day in some quarters "it would be necessary to make over all the fixed habits of farm life." A camp leader in Michigan reports that while his bogs were limited by agreement to five hours a day, after a few weeks of work they had 'hardened up'' so that they could easily have worked ten hours. And this suggests that possibly hours of labor should vary with experience.

Obviously the questions of wages, hours, housing, etc., need careful regulation and the boys need close supervision, so the hasic principle of Reserve work everywhere has been supervision and inspection to protect the worker and to ensure his doing work satisfactory to his employer. In Wisconsin, where the most elaborate system of supervision was evolved, about three hundred school principals, teachers and elergymen volunteered last summer as supervisors of boys at work. Almost everywhere the boys were under direct supervision of Boy Scout, Y. M. C. A., or other trained leaders, but to ensure adequate supervision everywhere, the Reserve stipulated at its annual meeting in December, 1917, that

Applicants for boy labor shall be supplied with such labor only free investigation of home conditions and working surroundings. An inspection at least weekly is stressed, with reports of impection to headquaters. Supervisors of character and of experience with boys are demanded and twenty-five is suggested as the maximum stall be an organization of the leiture time of boys employed to promote to the best advantage their moral, mental and physical welfare.

The Reserve has stated several times that a boy's education should not be interfered with by farmwork, and apparently last summer few boys worked except during their school vacations. The Reserve seems to have concluded, however, that some adjustment of school terms to the demands of farmwork is necessary, although it states cumplatically that "no boy should leave his studies to go to work unless he has been so advised by his teacher and his school superintendent." H. W. Wells, assistant director of the Reserve, said at the state conference of Indiana in December.

The policy of the Reserve suggests that school vacatious be slightly lengthened and adjusted so as to permit school boys to plant and to harvest the crops. If necessity complex we must dismiss our schools a little earlier in the spring and convene them a little later in the fall. It may be well to divide the vacation period into two

periods, one to cover the season of planting and the other to cover the season of harvesting.

And at the annual meeting of the Reserve it was recommended that there be

such modification of school calendars and programs . . . as will permit the release of school boys of stated age for farm work, the release to be made only as the necessities to maintain and to increase the food supply shall demand, and always with as little interruption of the school training as may be.

How this plan of adjustment will work out locally remains to be seen. Two things must be remembered in relation to it: first, the boys affected are sixteen and over, and therefore beyond most compulsory age limits-they can leave school without breaking any laws and are at the age when they are most likely to do so-but any shortening of their term is likely to affect the younger children also; and second, most of the boys come from cities and not from rural districts, so that their school term is arranged without the slightest regard to crops and harvests, and any change in it will affect many children who are not working on farms and never will. With intelligent cooperation on the part of the schools, some adjustment can be made undoubtedly, but it is to be hoped that those concerned will remember that school should be shortened only "if necessity compels us," that high school and college boys need all the encouragement possible to continue their education nowadays, and that both the commissioner of education and the President have urged on the schools of the country that education be stimulated and in no way handicapped during the war. The national officers of the Reserve, in close touch with other national bureaus, fully realize the seriousuess of the situation; the question is whether local authorities will realize it as well.

Interesting educational features of the Reserve which should not be forgotten are its vocational unit and farm training camps, which aim to train the boys in the work they are to do. Again, the Reserve is encouraging agricultural training in the schools.

The Reserve supplies boy labor tor other than agricultural tasks, but its emphasis is decidedly on its farm labor supply. It is organized in three units: agricultural; industrial, in which a boy must serve sixty working days of eight hourstablefore he is entitled to the Reserve's bronze badge; and vocational, in which a boy must serve "until he has prepared himself to undertake and actually has undertaken, work in some "essential industry" userssary to winning the war against Germany." Boys have been supplied to manufacturers by the Reserve, but its interest is in the agricultural unit because the high wages offered by industry are likely to draw boys away from farmwork and the farmers have borne and will have to bear the brunt of every labor shortage.

The Reserve last week had a National Enrollment Week, which aimed at "no less than the mobilization of every high school boy, and of every boy of Reserve age in the upper grades of the grammar schools, in the United States." The effects of this enrollment and the results of the boys' work in the summer of 1918 will be watched with deep interest. The Reserve has its problems, and it has doubless made its mistakes. But there is no doubt that Mr. Hoover was quite right in congratulating the Reserve, as he did on December 7, 1917, on "the great service they have rendered their country during the first eight months of the war."

# New Faces for Old

### How a Boston Sculptor is Putting Life into Copper Features for Soldiers

### By Mary Ross

OME men are tossed aside by the war machine—cripples. You see them about Paris, hobbling on crutches or clumsily trying new wooden legs, or with an empty sleeve, acting as porters in hotels, or doing the jobs that can be done with one arm or one leg, returning when they can to the occupations of before-the-war. But the most tragic men are those you do not see at all—or see only behind a mask of clean white bandages—the men whose faces have been torn and burnt by shells or gas or shrapnel so that those who love them most, must shudder to look upon the hideous wreck of features.

These men are barred from restaurants and theaters; they find their former workshops closed to them; even their friends cannot help an involuntary shrinking; although often ablebodied, they are condemned to idleness and isolation. Where breadwinning is a necessity their situation becomes desperate, and suicide sometimes seems the only way out.

French surgery has done and is doing miracles for them,

but surgical treatment is a matter of months, often of years, and there are not enough trained surgeons to fill the need for this difficult and delicate work. For some men surgery can do nothing; others cannot afford to wait for treatment. To make it possible for them to go about inconspicuously and take up their former work the American Red Cross has obtained the services of Anna Coleman Ladd, a Boston sculptor whose matbles and bronzes are well known in France, Italy and America, to make facial masks according to the process originated in England by Captain Derwent Wood.

The masks are made of thinly rolled copper, silvered over, and painted in flesh colors. They are made to cover the mutilated parts of the face, and are held in place by spectacle bows over the ears. Modelled by an experienced sculptor from photographs of the "mutile's" pre-war face, they have the vivacing of life—unconsciously you look for changing shifts of expression and former acquaintances have no difficulty in recognizing the old friend. Nor do they obviate the chance of

SCULPTURE AND SURGERY COMBINED TO GIVE THIS WAR-HERO A NEW FACE

permanent surgical regeneration of the tissues which, when the surgeon is ready, can be carried on under bandages hidden by the mask.

The first mask went to an officer who came back to his wife and two little daughters with all the military medals but with a face so terribly mutilated that he could do nothing. His mask is finished, and he can meet his friends again and face them without shrinking. Other "mutilés" have heard of the work—Mrs. Ladd has as many applications for aid as she can fill. In her studio hangs a service flag with two stars: one, for her husband who is directing the work of the Red Cross for children in the war-torn villages of the Meuttheet-Moselle, behind the American army sectors; the other, for her pioneer work, the first of its kind in France.

# Labor Getting Behind Health Insurance

HAT organized labor in the year 1918 should come out for health insurance, and compulsory health insurance, at that, will doubtless come as a surprise to those who attended the meeting arranged last year by the National Civic Federation, when capital and labor took turns in declaring their abhorrence of the doctrine. "Not demanded or approved by labor" has been the most convincing argument of the opponents of state administered health insurance all along. In lists of reasons against the passage of health insurance bills this has usually been reason number one. And now labor has gone and spoiled it! In a series of three reports, the New York State Federation of Labor has come out unequivocally for state administered health insurance, and has drafted a bill which is now pending in the state legislature. By this action the New York body becomes the tenth state federation to endorse a program of health insurance and joins the company of the nine international unions and the Women's Trade Union League and the Southern Labor Congress, which have previously given the movement their approval.

To the New York Federation of Labor the trend toward state administered health insurance seems so unmistakable that the question is no longer one of approval or rejection, but what kind of bill is the legislature going to pass? "To us as trade unionists," they conclude, in their first report, "there are two courses open. Either we may hold back blindly until a bill is passed which is disadvantageous and burdensome, or we may have a bill so drafted as to protect and promote the interests of organized labor." The report was prepared by a special committee of the federation, of which James M. Lynch of the State Industrial Commission was chairman, and it gives at considerable length the reasons for the belief of the committee that provision for health insurance should be made by law. These reasons so commended themselves to the two hundred delegates assembled in a special conference in February to consider this one subject, that they adopted the report unanimously.

Like the New Jersey Commission on Old Age, Insurance and Pensions (see the SURVEY for March 2), the committee was stirred by the draft exemptions and by what it found out about the prevalence of sickness among wage-earners. Reasoning from the results of the health survey of Rochester in 1915 by the Metropolitan Life Insurance Company, it is estimated that "there are in the state at all times nearly 150,000 persons of all ages seriously sick, and that the wage-earners of the state are suffering a wage loss from sickness of at least \$40,000,000 a year." Such facts as these led the committee to say: "We and the people of New York state are not going to sit idly by much longer and see our citizens afflicted by poverty due to sickness. Nor are we content to learn from Major-General Crowder's official report that 30 per cent of our New York youth, called to serve their country in what should be the flower of their prime, were unable to meet the physical requirements because they had not had proper medical attention during the periods when they were sick, or because their parents or their progenitors had not proper medical attention and proper housing and, therefore, had brought into the world a considerable number of men unable to pass the requirements of the government in making up its armies for the defense of this nation and other nations that are now engaged in the cause for which this great world war is being waged."

In one of the clearest statements that has yet been made of the necessity for health insurance and the form it should take, the report favors the inclusion of all wage-earners under a compulsory law. This has been one of the toughest bones of contention since the agitation in this country began. Many labor men have been disposed to reject any plan that included the element of compulsion. But the committee came to the conclusion that "only by making the plan compulsory can we count on all employers paying their share." Another serious trade union objection is removed, however, by making the plan include all wage-earners. The original bill of the Association of Labor Legislation limited the operation of the law to wageearners receiving less than \$1,200 a year. This provision was seriously attacked by spokesmen for employers and employes alike as promoting "class legislation." A third controversial point was over the question of physical examinations. The plan approved by the federation provides that workmen may be admitted to health insurance without examination.

The bill proposed by the committee and accepted by the federation provides for a cash benefit of two-thirds of the weekly wage to run for twenty-six weeks, with a maximum of \$8 and a minimum of \$5 unless the wage is less than \$5, in which case the benefit is to be the same as the wage. Medical and surgical treatment, supplies and nursing service are to be supplied to the insured worker and to his family. Maternity benefits are provided in the form of medical and surgical treatment for an insured woman or for the wife of an insured worker. Dental treatment is to be furnished to insured workers. The report comments on the poor medical service now received by the workers and states that probably there are 50,000 people in the state all of the time, too sick to work but without medical care. A funeral benefit of \$100 is provided.

To meet the premium payments, it is provided that the worker and his employer shall each pay one half the cost except where the wage is below \$9. From that point to \$5 the employer is to pay 75 per cent and the worker 25 per cent. Where the wage is less than \$5 the employer is to pay the whole premium. Provision is made for a "penalty contribution" by an employer who does not maintain proper standards of health and sanitation. Administration is to be under the supervision of the State Industrial Commission.

In a strong appeal for recognition of the value of health insurance the committee says that "health insurance protection. as we propose it, will follow a man throughout the state wherever he works. Under this health insurance, all employers will be compelled to insure their men, and it will make no difference where a man works, or how long he has worked for one employer, he will always be insured while he is at work. Nor will he have to prove, as he does today in workmen's compensation, which employer is responsible for his disability. If a worker is sick, that will be sufficient to entitle him to benefits." Moreover, this will provide for the wageearner certain standards of work and of living conditions as a matter of right. Some trade unionists have held that the employer should pay the whole cost, but "your committee does not believe American workers want to be spoon fed by their employers. If the employers paid the entire cost, would they listen for an instant to the pleadings, however insistent, of the workers for a voice in the management? Not at all! They would hand it all over to the commercial insurance companies and be freed from further bother. The workers would be left to fight their claims with the insurance companies."

If left to work itself out, it will mean group insurance and that will mean a tendency to "tie a man to his job." It will mean that the unions will lose to the casualty companies "control of the wage scale in the state" and it will mean physical examination. All of these things the committee believes, orcanized labor wants to avoid.

In the following words the case is summed up: "Through the work of your committee, certain objectionable features of earlier bills have been removed. The worker will have at cost price liberal medical care both for himself and his family, a cash benefit, and a funeral benefit. The burden of sickness to the worker will be very greatly diminished because the employer will assume financial responsibility for that portion rightfully attributed to industry. This will give employers a new interest in sickness prevention. Today, throughout the state, as the result of workmen's compensation, employers are showing a most lively interest in safety devices, for safety devices cut down insurance premiums. But interest in matters promoting health has lagged behind. The introduction of adequate ventilating systems, of exhaust pipes, of adequate toilet and washing facilities, will be stimulated best when they mean a reduction in the insurance premium. One of the great benefits of a health insurance measure will be the extent to which it will arouse interest in the prevention of sickness "

The second report issued by the New York State Federation of Labor consists of a transcript of the discussion at the special convention held in February at which the report of the Com-

mittee on Health was adopted. The entire meeting was devoted to the answering the questions of delegates, principally by James M. Lynch, chairman of the committee.

In a third report, which is just off the press, the committee lays stress on the advantage of health insurance to industry. This report is a direct appeal to employers. Attention is called to the fact that the evils which were predicted for work-men's compensation have not developed, and the committee expresses the belief that health insurance will be even more beneficial than workmen's compensation both to the employe and to the industry. They predict that it will mean much in the way of prevention, and that men will not be absent from their jobs on account of sickness as much as they are now. This they affirm will mean a reduction in labor turnover and a consequent saving to the employer.

The committee calls attention to private employers who have established health insurance plans on their own account. One Massachusetts company is referred to where it was found that the "hours per year lost by employes who took advantage of its hospital facilities, amounted to only half as many at those who did not accept this care." The reasons for dividing the cost equally between employer and employe are set forth, together with the advantages of mutual amanagement.

In addition to all other advantages of health insurance, which the report sets forth, there is one other which attracted the attention of the committee; this is "the opportunity thus offered both to employers and employes to learn the advantages of working together."

"If the world war for democracy," continues the report, "for which workmen by the millions are pouring out their life blood and for which employers by the thousands are unselfishly spending their wealth, is to result in permanently improved conditions for those who must in their daily toil in work shops suffer the hazards of occupational disease and premature death, it must come, in this country especially, through a more democratic relationship between employers and employes in the day-by-day working life of our industries. We believe ardently in our trade union organizations, and we believe thoroughly in organizations of employers. We are convinced that the group selection of representatives to serve each interest in the local management of health insurance funds will create a much needed feeling of solidarity of interest on each side. We believe, furthermore, that most friction resulting in open hostility between workmen and their employers might be removed 'at the source' if there were more just such opportunities for workmen and their employers to consult together over such matters of common interest as the conservation of the health and efficiency of the workers."

#### A NEGRO TO AMERICA'

HOW would you like to have us, as we are?
Or sinking 'neath the load we bear?
Our eyes fixed forward on a star
Or gazing empty in despair?

Rising or falling? Men or things? With dragging pace or footsteps fleet? Strong, willing sinews in your wings? Or tightening chains about your feet?

### WHY EMPLOYES STRIKE IN WAR TIME

HAT the high cost of living has Caused more strikes than any other one thing, is the conclusion reached by the National Industrial Conference Board after a study of 1,156 strikes occurring in the first six months of America's participation in the war-from April 6 to October 6, 1917. Reports were received by the board of 2,986 strikes during this period. Inquiries sent to the firms involved supplied the board with detailed information of only 1,156, which caused 283,402 employes to lose 6,285,519 production days.

The most serious stoppages were in the metal trades, ship building, coal mining and copper mining. In these four industries 46 per cent of the strikes occurred, involving over 61 per cent of the workers made idle, and 66 per cent of the working days lost. These are, however, industries in which the greatest number of men are employed.

According to this report an increase in wages was the chief demand in over 38 per cent of the strikes. Twenty per cent of all of the strikes, the next largest group, are ascribed to a combined demand for higher wages and a closed shop, and 7 per cent involved wages and hours. Wages were a factor, therefore, in 65 per cent of all strikes occurring.

The effect of unionization upon industrial peace is also touched upon. Over 48 per cent of the strikes, involving 41 per cent of the workers striking. occurred in shops where the employes are well organized; that is, where 76 to 100 per cent of them are members of unions. "This is not conclusive," says the report, "but it is significant in view of statements often made that where labor unionists are employed in large numbers stable contracts are in effect for long periods, subject to change only at stated intervals, and then only after due notice of intended change has been given; thus allowing time for adjustment without result of strike or lockout. In other words, the claim is that the unionization of industry makes for industrial peace. The facts do not bear out this contention." 719

It is noteworthy that nothing in the report indicates whether the strikes came at the end of a contract period or were in violation of contracts. On the question, therefore, of whether union memhership was a cause of these stoppages of work, or whether union members are better able to protect themselves than are non-union men, when living costs go up, the report is not fully enlightening,

Perhaps the most significant thing is the classification of strikes according to means of settlement. The largest number, 45 per cent, were settled by private conferences, and these were settled more quickly than any others. average number of days lost for each worker in the strikes where there were negotiations between the two parties was 15.8-a marked difference from the number of days lost where the employer fought the strikes in the courts by securing injunctions. These strikes were prolonged far beyond those where any other method was employed, the average number of days lost being 401/2. Indeed, the severity of the strike seems in every case to have been directly proportional to the extent to which negotiation was employed instead of force. This is shown very clearly when the different methods of settlement are presented side by side. Strikes settled by federal or state mediation averaged 23.4 days in length. Where the method was merely one of "awaiting development" or "sparring for time," 30.9 days were lost; where strikebreakers were engaged, 32.4 days, and where the employer sought aid in the courts, 40.5 days,

#### WAR FINANCE AND STATE TAXATION

HERE has been much agitation THERE has been much lately over the war-time need for a national budget and for other reforms which would convince the heavily burdened taxpayer that every dollar contributed by him towards the conduct of the war and the government of the country generally was spent without waste from avoidable causes.

There are three reasons why at this time the case for improved methods of state finance also is receiving increased attention. In the first place, there is the always present reason that more than one-half of the states are in a sense insolvent, i. e., are not paying out of current revenue the total expenses for governmental costs, interest on indebtedness, and outlays for permanent improvement. Eleven states, when the last report was made by the Census Bureau, did not even meet expenses and interest.

Another reason is the withered value of the dollar; if there must be an increased tax rate on this account, then the citizens want to know at least that every precaution is taken against waste and unfairness in its collection.

The burden of national taxes, which will mount higher as the war continues. is a third and compelling reason for the utmost efficiency and economy in state taxation. Not only the higher taxes but also the necessary wage increases and other added expenditures brought about by the war fall with special severity upon the enterprise which does not profit from the war boom in industry.

One of the directions which modern tax reform is taking is the creation of state tax commissions or commissioners to have supervision over the local administration of taxes. This movement, which has made considerable headway in the states of the North and West, is just beginning to reach the southern

The opposition which scientific tax reform has to meet is exemplified in the bitter fight which has been waged against the recently created Mississippi Tax Commission ever since the passage of the law creating it. An attempt to have the enacting statute declared unconstitutional was defeated by the decision of the supreme court of the state a year ago. The next move was the attempt to secure the repeal of the law by the legislature of 1918. The bill providing for repeal was defeated late in January of this year.

It was a somewhat interesting coincidence that the committee upon a model tax system of the National Tax Association happened to be meeting in Mississippi at the time the repeal bill came before the legislature; the presence of the members of this committee and the prestige of the association were among the influences which led to the defeat of the bill.

While it is a cardinal tenet of the National Tax Association that it conduct no propaganda, it feels free to exercise its influence and prestige in favor of a few fundamental betterments which have substantially the unanimous support of its membership. Along these lines, the association has been a powerful factor in achieving positive reforms.

### STATUS OF CONSCIENTIOUS OBJECTORS

DRESIDENT WILSON'S regulations, issued last week, for the treatment of conscientious objectors to military service, substantially comply with the recommendations made by the different sects and organizations interested in safeguarding the bona fide objector. If the spirit of the President's order becomes the spirit of those who carry it out, it is predicted that this country will have solved the knotty problem of conscientious objection to war much more happily than some other countries, notably England.

The President's order puts upon the same footing persons who have been certified by their local boards to belong to recognized sects opposed to war, and persons who have not been so certified but do object to participation in war because of conscientious scruples. He defines the "non-combatant" service into which all such persons may be put. This includes: (a) Service in the medical corps, wherever performed; (b) Service in the quartermaster corps in the United States, and also certain specified activities in the rear of the zone of operations; (c) Any engineer service in the United States, and certain specified activities, mainly concerned with construction and repair, in the rear of operations. Insofar as is feasible, assignments of conscientious objectors are in the future to be to the medical corps, but each individual may request assignment to some other non-combatant branch.

It is made the duty of each division, camp or post commander, "through a tactful and considerate officer," to present to conscientious objectors the opportuFrom American Industry

DOING HIS BIT

nities upon to them. A certificate of assignment is then given to the objector. This certificate is thereafter to be respected as preventing the assignment of its holder from non-combatant to combatant service, though the holder may request assignment from one branch of non-combatant service to another,

Persons who still refuse to accept non-combatant service under military authority, because of conscientious scruples against war, are not finally disposed of by the order. On April 1, and monthly thereafter, the names of such individuals are to be reported to the secretary of war, who will "from time to time" give further directions as to their disposition. Pending such directions, they are to be segregated as far as practicable and placed under the command of "a specially qualified officer of tact and judgment." This officer is to be instructed to "impose no punitive hardship of any kind upon them;" neither is he to allow their objections to be made the basis of any favor or consideration beyond exemption from actual military service.

The order further stipulates that sentences imposed by courts-martial for willful disobedience of lawful commands shall prescribe conforment "in the United States disciplinary barracks or elsewhere," but not in a penitentiary. This does not apply to deserters. The secretary of war is, moreover, directed to revise the sentences or findings of courts-martial heretofore held and to bring them to the attention of the President, if any be found at variance with the provisions of the order.

It is thought possible that, with respect to persons who may refuse, on conscientious grounds, to accept non-combatant service under military authority, legislation now pending before Congress may be applied to them. One such bill authorizes the secretary of war to grant furloughs "for such periods as he may designate" for the purpose of permitting men "to engage in civil occupations and pursuits." This would open the way to letting objectors engage in agricultural work, Red Cross activities and such social service as that of the Friends' Reconstruction Unit.

Another matter left open by the order is the disposition of objectors who have complied with the law up to the point of entraining for camp. A number have done that, notifying their local boards that they could not conscientiously entrain, but saying that they could be found at home. Whether such men will be treated as deserters and court-martialed and imprisoned, is not finally determined. Neither is it known whether objectors who accept non-combatant service will be required to bear arms for defensive purposes. Such training is required in the medical and quartermaster corps.

The order seems to make it clear that men who deny the right of the government to force them to any service whatever, whether in the army or on furlough, will either be court-martialed and imprisoned, segregated, or discharged as in some cases already—as "mentally unift for service."

### SCOTT NEARING AND MRS. STOKES ARRESTED

I N its arrest of two nationally promi-nent persons last week, Scott Nearing and Rose Pastor Stokes, the government went "higher up" in its search for alleged obstructionists to its war program than it has gone since indictments were returned last November against Max Eastman and other members of the Masses staff. Mr. Nearing was indicted on two counts, both charging violation of the espionage act, The basis of the counts was the writing and circulation of a pamphlet entitled The Great Madness, In the first count Mr. Nearing is charged with having caused or attempted to cause "insubordination. disloyalty, mutiny and refusal of duty in the military and naval forces of the United States"; in the second with having attempted to obstruct recruiting.

Mr. Nearing was formerly instructor in economics at the University of Pennsylvania, and later dean of the college of arts and sciences in the University of Toledo. Both before and after the entrance of this country into the war he was active in the work of pacifist organizations, notably in that of the People's Council of America.

Mr. Nearing pleaded not guilty to the indictment against him, reserving leave to withdraw this plea in ten days and to demur instead. If convicted, his maximum penalty may be imprisonment for twenty years or a \$10,000 fine, or both. Immediately after the indictment, he said in part:

Daniella Google

 an American citizen, have been indicted for exercising my constitutionally guaranteed rights of free speech and free press.

I have made the record, and I am pre-

In all that I have spoken and written, I have iried carneally to state the truth as I see it. If this is a crime in the United States I am willing to pay the penalty of it, because I know that a jail sentence, imposed on such grounds, will do more to arouse an intelligent spirit of revolt in the American people than a thousand lectures and a library full of books.

The Great Madness is a forty-fourpage pamphlet, published by the Rand School of Social Science, of New York city. Twenty thousand copies are said to have been distributed to all parts of the United States. It reviews the entrance of this country into the war and attempts to establish the thesis that our entrance "was the greatest victory that the American plutocracy has won over the American democracy since the declaration of war with Spain in 1898."

Coupled with the indictment against Mr. Nearing was an indictment charging the American Socialist Society with mailing non-mailable matter in helping to circulate The Great Madness.

Mrs. Stokes was arrested at Willow Springs, Mo., while on a lecture tour. Verified details of the charge against her are not at hand as we go to press.

#### FURTHER HAPPENINGS IN MOONEY CASES

THE Supreme Court of California last week ordered that Israel Weinberg, one of the defendants in the San Francisco bomb case, be released under \$5,000 bail. This is being hailed as a victory by friends of the defense, who are inclined to believe that the court has been influenced by the criticism launched against it since it rendered its technically legal decision denying a new trial to Thomas J. Mooney, without considering any of the facts involved in the Oxman affair. Whether or not this is a correct viewpoint, the Weinberg matter is another revelation of the peculiar conditions that surround this world-famous prosecution.

The grand jury that was convened after the explosion on Preparedness Day, July 22, 1916, indicted each of the five suspects separately for each one of the eight deaths that had then occurred. (The two others who died later as a result of the explosion were still living at the time of the grand jury sessions.) These indictments were distributed among the three judges of the superior court as follows: Three in the court presided over by Judge Dunne; three in that of Judge Griffin, and two in that of Judge Cabaniss. District Attorney Fickert takes the position—and the courts have upheld him—that it is not placing the defendant "tweic in jopanque like in the courts have upheld him—that it is not placing the defendant "tweic in jopanque."

for the same offense" to try him on each of the eight indictments, if that may be necessary to secure conviction. This, despite the fact that the crime committed was a single crime and it is impossible to adduce any evidence to show responsibility for the death of one victim that would not apply with equal force to the death of all of the others. If a defendant is convicted on any one indictment, he cannot have a second trial unless there were obvious errors in the record. That is the situation in which Billings and Mooney find themselves. If, however, the verdict is "not guilty," the district attorney is free to try the matter out again with another jury and to continue to do so until he has exhausted all of the indictments. This is the position in which Mrs. Mooney and Weinberg are placed-both of them have been acquitted, but both of them until now have been held without bail pending a second trial.

The case reached one of its most interesting stages a short time ago when the date came around for the second trial of Weinberg, in Judge Griffin's court, The district attorney appeared and pleaded for an extension of time. He was not ready to go ahead with the trial of a man who has been in jail since July, 1916. Judge Griffin refused to entertain a motion for a postponement and insisted upon an immediate trial of the case, whereupon the district attorney moved for a dismissal of all of the indictments against Weinberg, then pending in Judge Griffin's court. Soon afterwards he made a motion for a similar dismissal of the two indictments outstanding before Judge Cabaniss. This leaves Weinberg with two indictments against him in the court of Judge Dunne, who has been bitterly and outspokenly hostile to the defense, and who has repeatedly and from the bench condemned the attorneys for the defense and attacked the defendants. It was Judge Dunne who, when he heard of the report of the President's mediation commission urging a new trial for Mooney, said that he did not expect anything different from "Bolsheviki Frankfurter"-meaning Prof. Felix Frankfurter of Harvard Law School, counsel to the commission.

In view of this action by the district attorney, the attorneys for the defense appeared before Judge Dunne and asked that Weinberg be admitted to bail. This was refused; whereupon an appeal was taken to the Supreme Court with the result stated above. The case of Mrs. Mooney is scheduled to come up this week for a second trial in Judge Griffin's court. It is expected that the same procedure will be gone through and that ultimately all of the indictments will be dismissed, excepting those pending in Judge Dunne's court. In the meantime, Governor Stephens of

California is being urged to grant a pardon to Mooney. If this is done, he will immediately be rearrested and placed on trial under one of the seven indictments still pending against him.

### NON-RESISTANT PREACHER GUILTY

WITH a group of his fellow-Pentacostals occupying front seats in the court room, the Rev, C. H. Waldron, a non-resistant minister of Windson, Vt., was sentenced to fifteen years in the federal penitentiary at Atlanta last week for violating the espionage act. He was specifically charged with causing disloyalty and opposition to the draft among the young men of his Bible

Mr. Waldron is a literalist in the interpretation of the Bible, He holds the Quaker views about war. At his first trial [see the SURVEY for February 16. 1918] members of his Bible class of draft age attributed remarks to him tending to establish his opposition to conscription and the prosecution of the war. Mr. Waldron's defense was, in part, that exaggerated inferences had been drawn from what he said, and further that he was in reality being tried for his conscientious beliefs-beliefs that were a part of his religion. Public opinion was aroused to a high pitch, most of it assuming Mr. Waldron guilty. The scales were turned when, in the course of the trial, his friends brought into the court room an unmistakable atmosphere of religious humility and honesty of faith. After twenty-four hours' deliberation, the jury, unable to agree. was dismissed without a verdict,

At his second trial, transferred from Brattleboro to Burlington, the prosecution succeeded in excluding the religious issue. In the opinion of Mr. Waldron's friends, however, it remained true that the real source of much of the opposition to him was the differences that had arisen between Baptist state officials (Mr. Waldron was formerly a Baptist) and himself on account of his Pentacostal views. These friends believe that the fundamental issue involved in his case is "whether or not a literal belief in the Bible and the preaching of that belief is a violation of the espion-age act." The case was not tried on that basis, however, and the League for Democratic Control, of Boston, which helped Mr. Waldron prepare his defense, had difficulty in finding lawyers who would rely on what the league regarded as this proper appeal to fundamental principles. The case "was lost," according to H. L. Rotzel, secretary of the Civil Liberties Committee of the league, "in a maze of charges and counter-charges" that concealed the real issue.

The judge's refusal of bail and the extreme sentence are expected to react

in favor of Mr. Waldron, so far as the people of Vermont are concerned. An appeal, it is announced, will be taken.

### CHILD WELFARE STUDIED IN OKLAHOMA

JUST now when agriculture is assumjing such importance in its relation to
national defense it is disheartening to
learn that of all the farms in one of
our large rural states over one-half are
worked by tenants. The renters of this
state "own nothing but what they can
put into a wagon and drive off with."
Much has been written about the poverty of people living in cities, but "little
is known of the poverty in many of these
rural tenant homes. The country has
been pictured as a beautiful place to live,
where all human wants are supplied—
a picture that never reveals the suffering and privation these tenants endure
in order to live the barrenest kind of
life."

These sentences, quoted from a report on child welfare in Oklahoma, published by the National Child Labor Committee, tell only part of the story contained in that report. The report seeks a basis for action in knowledge of the whole gamut of conditions surrounding child life. Up to the present four states have taken action to codify their child laws-Ohio, Minnesota, Missouri and New Hampshire. With the exception of Missouri the method in the four states was practically the same: first, to appoint a commission to study the laws, then, on the recommendations of that commission, to take legislative action. The result has not been all that it should be. In Ohio, there was no preliminary state-wide survey of conditions, and the social workers of the state did not awaken to the importance of the code until it had been submitted to the legislature. Consequently there was controversy among the different groups, resulting in many changes in the code and partial mutilation. A previous general study would have enabled social workers to get together on a program. In Missouri social organizations did attempt a joint effort for cooperation.

The social workers of Oklahoma felt that any effort to codify its laws would be futile unless such action were preceded by a state-wide survey of condi-tions. The advantage of this method is that after a broad view or picture is obtained it is possible to determine whether the picture requires action, and if so, in what direction. The authority of an official commission may then be sought to codify the laws and to bring them up to standards recognized as fitting. It was on this basis that the committee was asked to make a survey of the state for the University of Oklahoma, the investigation being conducted under the direction of Edward N. Clopper, of the committee's staff.

Although they were only "gleaners," following after the requires take force, the Boy Scouts of America secured subscriptions of more than \$23,000,000 to the first liberty lean and of \$100,000,000 to the second. For the third loan campaign, beginning Agril 6, the boys are ready to start a house-to-house canvast, fortified by their experience and by the end of the control of the control of the total property of the control o

Social workers and others who have worked for the protection of children have long appreciated that there should be some coordination of the different standards, functions and activities, not only in the interest of effective administration by state and local authorities. but of the children themselves. For example, in the field of poor relief, the problem of mothers' pensions hinges directly upon that of compulsory school attendance and the restriction of employment of children. But in some states, as in Oklahoma, the measure of relief afforded to mothers under the law is entirely inadequate, granting the observance of the school and child employment laws. Yet this is exactly the sort of thing that results when legislation proceeds along unrelated lines. Bring all the laws affecting children together

under one code, proceed from the point of view of the child's welfare, and you will produce effective instead of haphazard and piecemeal results.

The report covers the fields of public health, recreation, education, child labor, agriculture, juvenile courts and probation, the institutional care of children, together with home finding and poor relief. The closing chapter knits all these together and makes recommendations looking toward the coordination of the various functions and activities, In comparison with other proposed codes, a unique addition here is the setting forth of the questions relating to the parentage and property rights of the child, both the present laws and desirable changes. Perhaps the most striking finding is in the discussion of the land tenure problem. In the August, 1917. Child Labor Bulletin a report was made on the causes of absence from rural schools in Oklahoma; the present report goes into the basic conditions responsible for these causes. It shows that "farmwork," "illness," etc., while the immediate causes of non-attendance, are not the real causes; these are to be found in the economic system to which the tenants and small landowners are obliged to submit.

Discrepancies in the laws themselves are pointed out. For example, the juvenile court, having committed a delinquent child to an institution, may order the release of that child although the superintendent of the institution would not be willing even to grant him parole. The power on the part of the court to retain jurisdiction over the immates thus interferes with the very important parole work done in the institutions. The conflict is a direct result of the lack of standardization.

The report is evidence of the growing interest in the codification of child welfare laws, and the realization that a knowledge of conditions governing the care, education, recreation and work of young children must precede legislative action. In this respect the problems of Oklahoma are of national importange, for they are the problems that every state faces in greater or less degree.

### NEW WOMEN VOTERS MAKE A DENT

ARMED with knitting bags and brief cases, two hundred newly enfranchised women went to Albany on Tuesday, March 19, to seek support from the legislature for higher labor standards for women and girls. This was their first visit to the Capitol since their enfranchisement on November 6, and it took no detective to see the changed attitude of the legislator toward his new constituents. Heretofore legislators have been kindly in their attitude toward women lobbyists—even paternal. But they have not always taken them scriously. Now women are of age, and it was evident on every hand that the legislators know!

Practically every woman's organization in New York was represented, including the Woman's Trade Union League, National and New York City Consumers' League, State Federation of Labor, City and State Federation of Women's Clubs, Women's City Club, Women's Municipal League, Young Women's Christian Association, Council of Jewish Women and the Association of Neighborhood Workers.

Chief of interest were the hearings before the Labor and Industry Committee of the Senate on the Wagner minimum wage bill and the Lockwood eight-hour bill. Every seat in the Senate chamber was taken as trade-unionsits, representatives of social and civic ists, representatives of social and civic organizations and prominent suffragists spoke in behalf of these measures.

The New York City Consumers' League estimates that \$11.70 is the least upon which a woman can live decently and healthfully in New York city, and yet it was brought out before the committee that thousands of girls are trying to live in New York city on as little as \$5, \$6 and \$7 a week.

"Who pays the difference?" was the question. "It is paid for in decreased health and efficiency," replied one spokesman for the workers. "Our charitable societies," said another.

The Wagner minimum wage bill is modeled after the Oregon law, which was upheld as constitutional in April, 1917. It is an act creating a permanent wage commission composed of three members who would, in turn, appoint wage boards for each occupation. The board would consist of representatives

II.-The Reaper

III .- The Gleaners

After Millet, in the Chicago Sunday Herald

of employers, employes and the public. After an intensive study of the coat of living in various localities, it would fix wage rates for women and minors. The principles of wage determination would be such as to guarantee to the worker the minimum earnings sufficient to cover the necessaries of life and to maintain health and efficiency. There was no visible opposition to this measure.

The Lockwood eight-hour bill provides for an eight-hour day for women and minors in practically every industry in New York. It prohibits also the employment of women between 10 p.

M. and 6 A. M.

Opposing the Lockwood bill at the hearing were the Interborough Rapid Transit Company, New York Tele phone Company and the Brooklyn Rapid Transit Company. These companies claimed that if women were prohibited from night work they and similar public utilities would be forced to cease their operations during night hours.

"There are plenty of men available for night work," was the answer of the Woman's Trade Union League, figures of the private and public employment bureaus, showing that the man-power of the state is not nearly exhausted, being quoted. Trade union girls, who have an eight-hour day now through their trade organizations, made a strong plea for a shorter work day for the unorganized girl.

A plea was made for a shorter work day to enable working girls to have more time for recreation and wholesome living. Testimony from other states where the eight-hour day is now in force was read, showing that the shorter work day did not decrease output, but increased output through increased efficiency of the worker.

Both bills are still before the Labor and Industry Committee of the Senate.

### THE SETTLEMENT A SCHOOL OF INTERPRETATION

UNDER the caption, New Tasks for a New Time, H. A. Mess, secretary of Mansfield House University Settlement, in London, in a recent number of the house magazine outlines an unconventional program for settlement activity in war time. "Some of us." he says, "have been thinking hard about the policy which we ought to adopt in view of the great changes which the war is bringing."

He lays down the principle that now as always one of the fundamental purposes of settlement work is to bridge the gulf between the classes. He foresees the danger of an embittered social comfict owhen the international conflict comes to an end. "We want, as our special contribution to the needs of the time, to take in hand quite definitely the training of middle-class people in social knowledge, the interpretation of class

to class and the assuagement of class bitterness. We know that this is no easy matter. It is a big program, and we want to undertake it in a big way,'

Mansfield House has been one of the most effective agencies for doing this very thing for close on twenty-seven years, and the lines which its present residents propose to follow will not be without interest to American social workers, even though conditions here are somewhat different.

Item number one of the program caters to that large group of sympathetic people who cannot spare the time to live for a long while in an industrial district but who are willing to give up a few days if these days can be made profitable. For them, short "social study schools" have been arranged, lasting in each case three or four days. Such a school has been held, for instance, for theological students, and another one for medical students. For next April a school is planned for students of the London School of Economics.

From ten to twenty students on each of these occasions stay in Canning Town for four days, spent in informal talks with local workers of various typesdoctors, school teachers, members of the Boards of Guardians, trade unionists and the like. There are also set lectures on the main economic facts affecting the neighborhood. They are shown around and "get short, vivid impressions of conditions in the district, they feel its ugliness and the hugeness of it. they understand that much of their comfort is purchased at the cost of those who live down here." Ministers, deacons and business men are other classes to be lured to the East End by similar "schools."

Another measure taken is the arrangement of lectures before middle-class audiences by working men and women of the district, "not trade-union leaders or recognized speakers, but just rank and file, typical of many thousands who seldom get an opportunity of ex-pressing themselves," Some of these speakers, usually men and women attached to settlement clubs and societies of one kind or another, have made deep impressions.

Then again, the social workers themselves have started regular informal discussions separately with factory girls, laborers, mechanics, foremen and sometimes with employers ("but employers are shy birds") to get at the causes of the present antagonism between the classes. Some of the information obtained in this way has been embodied in an interesting compilation on some causes of class misunderstanding, entitled The Other War (Allen and Unwin, London, one shilling),

Lastly, it is proposed to spend money more freely on pamphleteering and on an increase of the clerical staff which

would enable the settlement workers to spend more of their time in meeting with outside groups of persons and extending the influence of the settlement if-and it seems to be a pretty big if-a fund for this purpose can be raised in these difficult times.

In spite of great difficulties, says Norman M. Hyde, the head worker of Mansfield House, the normal activities of the settlement must go on as usual, and every effort is made to attract more permanent residents. In addition to much club work and relief activity, this settlement is doing much to bring the beautiful, in music, drama, the fine arts and literature, before those who see too much which is ugly. And the religious motive runs through all the

### Book Reviews

THE NEW SPIRIT OF THE NEW ARMY

By Joseph H. Odell. 121 pages. Flem-ing H. Revell. Price \$.75; by mail of the SURVEY, \$.87.

If any mother, father, wife, sister, friend or best girl of a man in camp wants to find out what the important-that is, moral and spiritual-conditions in our training camps really are, they cannot do better than read Mr. Odell's book. For Mr. Odell not only tells the things one wants to know, but, what is equally important, the things he tells are really so.

Mr. Odell was himself for thirteen years chaplain of the thirteenth Ohio regiment of the National Guard, and he visited his old regiment at Camp Hancock and got next to the officers and men of the camp, from Gen-eral Price down. It is clear also, from the internal evidence of the book itself, that he really found out what was going on-and what was not.

The testimony of the book is very encour-

aging: the men show a splendid spirit, earnest, cheerful, greedy to learn; drunkenness reduced to an unbelievable minimum; the desire for liquor lost with its continued absence; far less vice than among the same class of men at home.

The writer says of Camp Hancock: "I would rather intrust the moral character of my boy to that camp than to any college or university I know. This does not cast any unusually dark shadow upon the educational institutions of the country, but they have never possessed the absolute power to control their environment that is now held by the War Department."

These results, Mr. Odell finds, are largely due to the special care exercised by the government through the Commission on Training Camp Activities, of which Raymond B. Fosdick is chairman. Partly they are brought about by the negative provisions: closing saloons, abolishing red-light districts, stimulating civil authorities to take effective measures against commercialized vice. But largely the commission's positive program is responsible.

Mr. Odell describes the wonderful work done by the Y. M. C. A.—its universal presence at the right time and place with the thing the soldier needs—and that of the Knights of Columbus and the Hebrew Association following in the same direction.

He speaks of the influence of the camp libraries, the theaters, the directors of singing and of athletics, and of the work of the Playground and Recreation Association of America which, under the direction of the commission, has charge of mobilizing the social and recreational resources of the com-

munities outside the camps.

munities outside the camps.

Very gratifying to a playground faoatic is
the demonstration here given, in a national
crisis and on a national seek. I also the
crisis and on a national seek, a property of the
theater, games, athletics, social centers,
verything that we have been preaching durting the last fifteen years. The whole gamut
of play activities is used, from inspirational
singing down to the most rollicking and informal games.

Beyond the definite military exercises, such as calishenies, boxing, and bayonet practice (the bayonet, Mr. Odell says, has been the greatest teacher of the psychology of ward), the general control of the psychology of ward), the general control of the psychology of the psychology

Best of all is the recognition of the paramount place of the team spirit. The author cites the testimony of a regular army officer that after thirty days the thetrogeneous elements thrown at him by the draft—exemplifying every variety this assonishing country of ours can produce, from the millionaire to the man in the produce of the produce of the testimon of the produce of the produce of the reprint de carety, corporate soul, the expressive French phrase for being a team

And back of all this, Mr. Odell has seen that it is the team spirit of America that is going to win this war, so far as we considered that the seed of the seed of

even from the purely military point or view this social work for our enlisted men has proved itself one of America's great contributions to the war—as important perhaps as the airplane, the machine gun or the submarine.

JOSEPH LEE.

A New Basis FOR SOCIAL PROGRESS By Wm. C. White and Louis J. Heath. Houghton, Mifflin Co. 229 pp. Price \$1.25; by mail of the SURVEY \$1.35.

In 1915, the trustees of the University of Pittsburgh instituted a survey for the purpose of discovering more effective methods of handling the local educational problem. As the handling the local educational problem, As the handling the local educational problem, As the handling the host ways the overanization of neighborhood units as the basis of democratic administration. They hold that such natural communities are disinguished by their precession of the handling that the handling the handling that the handl

The writers do not contend that education should be vocational in the narrow sense for limited training for special trades, but they believe that personal development must believe that personal development of the present development of the present of the presen

mass of students.

Those lines of study which are important should be organized into department extending from the lowest gradetto postgraduate divisions, and pupils should be graduated divisions, and pupils should be so far as their mental account will permit of a study of the curriculum permits and a study of the curriculum permits and interest and the curriculum and the study of the curriculum for the study of the curriculum permits and interesting and permits and the study of the curriculum permits and interesting and the study of the

In order to correlate this diverging system, it is suggested that a regional university include in its councils representatives of the resential lines taught throughout. Moreover, a municipal foundation for the study of local conditions and for the readjustment of the whools to meet the changing needs, would against wasseful duplication, and guard against wasseful duplication.

As trustees for this board, not only cultured clergymen and wealthy business men should be included, but representatives of the various important local interess should find a place. This same principle of democratic representation is advocated throughout the school system, in order that it may not be exploited by theorists, shop managers or politicians.

A supplement briefly indicates the industrial character and educational needs of Greater Pittsburgh. The local situation is made the basis for a plea that the university adopt the principles advocated to bring order.

and economy into the system there. The reader would obtain more valuable suggestions from the book if this local study had been presented in greater detail and hap receded the general statements as practical illustration of the method of community analysis. Howard B. Woulston.

THE PLAN OF MINNEAPOLIS

By Edward H. Bennett, edited and written by Andrew Wright Crawford. 227 pp. The Civic Commission of Minneapolis. Price \$10; by mail of the Survey, \$10.50.

A significant psychological phenomenon of our time is the inability of the average imagination to picture conditions such as they will be in times removed from ours by distances the property of the property of the property of the property of conditions as they have existed in times removed from ours by centuries. This is all the more curious since the material available for historical retrospection is exceedingly sketchy compared with that surrounding us on all sides for prospection.

Take, for compositions and of our carriers of the composition of the carriers of many of them in adjusting their physical development to the actual needs of the people, it is yet obvious that only very few attempt in their present plans to provide for the needs which must be expected to arise, say, thirty vers hence. And thirty years, in the life of a city, is an exceedingly small time unit.

The Civic Commission of Minneapolis had an unusually broad conception of the task of planning. In the foreword to the present report it warms the reader that to appreciate it he must "project his imagination into that future of fifty or more years hence and become a cliven of that day with an appreciate control of the c

It is a part of intelligent anticipation to evaluate not only general tendencies, but more particularly those that arise out of the city's individual character. This also technique the commission has had in mind; and it has charged the expert which it employed to preserve and increase rather than obliterate in the new plan the distinctive lines given to the old by the topography and by the origin of the settlement some sixty years ago.

And yet, the task as seen by the commission may have been a mistaken one—for the simple reason that, while conceiving the economic forces as dynamic, it remained recommit forces as dynamic, it remained and relationships. Thus they assume as a matter of course that the further growth of Minneapolis and its rivalry with other cities to commercial and industrial importance and in population not only is but will remain an and relationships. The state of the commercial and the commercial model of the commercial and and of the commercial commercial and the commercial and the commercial products the commercial and the comtained the commercial and the com

Mr. Crawford admits that something is to be said for limiting the size of cities; but it has not, apparently, occurred to him or to his clients that an answer to the question of declients that an answer to the question of dependent of the control of the control of the to scientific planning. Throughout the report, the concentration of populations in monstrous "metropolitan" areas is looked upon as something inevitable, whether it be

desired or not.

Taking the commission's instructions as given, no complete appreciation for all the finer points of Mr. Bennett's work is necessary to recognize that in its main features has plan will answer for at feat one gendral to the state of the sta

Alongether too little attention is given in the report to the main problems of reidential planning, though it contains much intereating information on such matters as suburban transportation and play space. The rapidly increasing demand of industrial workers for garden space near their homes (of larger size than the average back yard, yet not miles away in a big city park) does not seem to be sufficiently provided for.

The outstanding features of the plan are the completion of a diagonal street system, already existing in embryo, and the creasion of one of the intersections of a commanding civic center, related by broad avenues to subaidary centers of public activity, one of them the civis acropolis of art and learning, and the complete of the com

Mr. Crawford's text, full of admirable maxims and of appropriate information from the corners of the earth, beautifully illustrated. Iffix his volume out of the general run of city planning reports. One need only add that in the excellence of its reproductions and general appearance, it is as attractive as the famous Chicago report.

BRUNO LASKER.

THE PLAY MOVEMENT AND ITS SIGNIFICANCE By Henry S. Curtis. Macmillan Co. 345 pp. Price \$1.50; by mail of the Survey, \$1.62.

To learn what the playground and recreation movement has already achieved and what are some of its principal avenues for further advance, you should read The Jaw Movement and Its Significance, by Henry S. Curtis, who is one of the leading men of vision in recreational lines and the author, now, of five of the principal books on play,

The latest volume shows wisdom, insight, resourcefulness, a wide and patient study of American and European recreation, and a

genuine passion for making the life of all the people stronger and more beautiful. It is eminently a practical book from which people interested in schools, parks, municipal activities and social service will gain many

activities and social service will gain many helpful suggestions. One of Mr. Curtis's principal suggestions is that play for children of school age should be adequately developed by the public schools. His analysis of park and municipal playgrounds for these children leads him to conclude that they are necessarily inadequate. The splendid pioneer achievements as well as the limitations of municipal playgrounds are analyzed in the interesting chapter describing the South Park playgrounds of Chicago and the municipal systems of Philadelphia, Los Angeles and Oakland. This chapter includes a helpful discussion of field houses, social settlement features, the race problem and the need for play leaders.

Through a very appreciative study of The Camp-Fire Girls and The Boy Scouts, Mr. Curtis emphasizes his feeling that the natural instincts of child life and the present conditions of society should he so interpreted in our recreational activities that they will really fit people for the life of the day and enable them to live it in health, happiness

and social good-will.

This theme is resourcefully applied to feebleminded children and youths, to insane people and juvenile delinquents in hospitals, reformatories and other institutions. Curtis has been one of the first social engineers to urge the evident importance of giv-ing these shut-ins such appropriate activities as the recreation movement, better than any

other, can provide.

How to make a recreation survey; how equipment should be selected, purchased or constructed; convincing arguments as to the economy of playground developments and the increasing of property values which they ef-fect; helpful discussions of commercial recreation and of the activities which the public should take over in these lines; emphasis upon the use of play and recreation in farming communities and homes; these and other timely subjects, all vital to the and other timely sunjects, an vital to the development of efficient Americans, are dis-cussed in this practical, inspiring hook. Charles Frederick Weller.

THE PRISONER OF WAR IN GERMANY

By Daniel J. McCarthy. Moffat, Yard & Co. 344 pp. Price \$2; hy mail of the SURVEY \$2.15.

At the beginning of the war several of the warring countries requested the United States to care for their citizens in hostile The efficient work of the United States embassies in London, Petrograd, Berlin and other European capitals in inspecting prison camps has been known to but a limited number of Americans because of the diplomatic problems involved. The State Department has therefore done a service to the country in permitting the publication of Dr. McCarthy's book.

He describes actual conditions among the million six hundred thousand military prisoners and forty-five thousand interned civilians in Germany. The author confines himself to a great extent to the reports made by inctors or to camps which he has seen himself. The reader feels that he is being given the facts and that they have not been influ-

enced by personal bias.

Parts of the hook are not pleasant reading, especially at a time when the cables tell us that our own countrymen are heginning to appear among this great throng of unhappy occupants of German prison camps. Dr. McCarthy hrings out the fact that there is no typical German prison camp, but that each camp becomes what the commander of the camp desires.

# White Dress Cotton Fabrics for 1918 at McCutcheon's

The demand for White Fabrics indicates their popularity for the coming season. We have on hand every conceivable weave and weight for Blouses. Dresses, and Separate Skirts, as follows:

Imported Dimities, 28 and 30 in. wide, 25c to 75 yard. Imported Dotted Swiss, 30 and 40 in, wide, 75c to \$1.50 yard. Imported Batiste, 40 in. wide, \$1.25 to 2.00 yard. Imported Voiles, 40 to 45 in. wide, 50c to \$1.50 yard. Imported Piques, 36 in. wide, 50c to \$1.25 vard. Imported Madras, 32 in. wide, 35c to 75 yard. Imported Eponge, 54 in, wide, \$1.00 to 1.25 yard. Novelty Skirtings, 36 in. wide, 75c, 85, \$1.00 to 1.75 yard. Novelty Voiles and Crepes, 36 to 45 in. wide, 50c to \$2.50 vard. Poplin and Repp. 36 in. wide, 50c, 75 to \$1.00 yard. Japanese Crepes, 30 in, wide, 40c to 75 yard.

Also French Lawns, Batiste, Transparent Organdies, French Nainsook, Ecru Batiste, India and Persian Lawns. Sylva Lawns, English Nainsook, Long Cloths, French Percales, Handkerchief Linens, Linen Cambrics, and the heavier Linens in all the various weaves, widths. and qualities to meet all requirements.

Samples of any of the above materials, not bordered materials, will be sent on request. Please state name and price of material desired and purpose for which intended.

### James McCutcheon & Co. Fifth Avenue, 34th & 33d Streets, New York

A sympathetic German officer, such as the one at Friedsrichsfield, handicapped though he may be with poor equipment, may succeed in developing intense interest in the welfare of the prisoners on the part of everyone con-nected with the camp. On the other hand, at Minden and Wittenberg overcrowding, brutal treatment on the part of the guards, lack of wholesome food, and the herding together of prisoners with no regard to racial prejudices, adds to the depression and discouragement which has overcome men accustomed to look forward to death but not to capture. Dr. McCarthy devotes some space to the horrors of the typhus camps of 1914-15, hor-

rors which have been given publicity in this country. One finds it impossible to picture

men trained as doctors deserting thousands

of fellow human beings and leaving them in indescribable filth without medicine, overcrowded, the sick carried out on the dining tables for which no method of disinfection was provided before using them again for

Inspectors of prison camps, the author feels, should he trained physicians with a working knowledge of large social service problems, hygiene and hospital or camp inspection, with some knowledge of military form and procedure and with sufficient assurance and tact to stand firmly for their rights in the inspection and correction of evils wherever they exist—an ideal our government must try to attain if a similar problem should arise in the future.

IN ECONOMIC CAUSES OF WAR

By Achille Loria. 188 pp. Chas. H. Kerr & Co. Price \$1; by mail of the Survey \$1,10.

The author deals with the causes of war im both an economic and legal standpoint. traces the rise of international law from early beginnings and shows that trade st arose, not between individuals, but beeen tribes, and necessitated rules regarding rights of foreigners. Another set of ed to break down international comity and

oduce war. What the author calls the "decline of the enue" and the "decline of profits" leads an effort to shut out foreign competition d to recoup the declining "revenue" at the sense of foreigners. The author asserts the iners from protection and from war are : capitalist class, although he elsewhere states that the big financiers are interested in keeping the peace.

The book contends that all wars are purely results of economic causes and that the Spanish war was merely the result of a decline in the profits of the American sugar manufacturers. He emphasizes the point that the common people gain nothing by war and believes that if all nations had a republican form of government, controlled by the labor-

ing classes, war would cease. This book was written before the outbreak of the present war, and the author thinks that the Hague convention and similar agreements, together with the increased expense

and destructiveness of war, will result in diminishing and ultimately abolishing it. In Chapter II he says that the "revenue is a concominant of the forced association of labor and develops in its progress a series of checks to the expansion of the productive forces." Here one expects to encounter a treatment of the law of diminishing ceturns, but the author nowhere succeeds in develop-

ing the idea clearly.

The author is doubtlessly right in saying that "at no period of history have states hesitated to tear up any international treaty that hampered their movements." Still, in the last chapter he puts great faith in the

It is not clear by what process democracy is to prevent the operation of the economic checks which the author says lead to lower productivity of labor. It is not certain that so-called working-men's associations are opposed to war. Karl Marx inveighed against wars between nations, but he was a most

vigorous preacher of the class war. Altogether, the book, though not entirely convincing, is very suggestive. It is really

stronger on the legal side than on the ROCER W BARRON

THE AMERICAN YEAR BOOK

economic

Edited by Francis G. Wickware. D. Appleton & Co. 822 pp. Price \$3; by mail of the SURVEY \$3.25.

Practically every field of human endeavor is explored by this volume. It is a complete digest of national activities. Considerable Considerable space is given to the war; and foreign affairs and international relations are treated comprehensively. The many activities which have grown out of the war, from the Red Cross organization to the wage disputes, are described.

The editor has managed on the whole to keep clear of cranks, and, although there are many propagandists among the con-tributors, the limitations of a year book have fairly well kept them down to the solid earth

ENGLISH FOLK SONGS FROM THE SOUTHERN APPALACHTANS

Collected by Olive Dame Campbell and Cecil J. Sharp. 341 pp. G. P. Putnam's Price \$3.50; by mail of the SURVEY

Somebody once asked William Sharp (Fiona Macleod), "How many poets are there now living in the British Isles?" The answer came swift and sure, "Between three and four thousand." The questioner gasped in amazement, "Three or four thousand people upon whom the divine afflatus has even once descended?" "Yes," replied the Celtic poet with a smile, "for that is the population of the Hebrides, where every islander is a poet."

That is the kind of unexpected answer the collectors of this book of folk songs would give us if we were to ask them to name the musical center of America. Disregarding the great millionaire cities,—New York with all its music schools and concerts, Boston with its academies and orchestra, Chicago with its opera-Mrs. Campbell and Mr. Sharp are clearly convinced that the musical capital of the United States is somewhere in the southern Appalachians, and they offer this book of over one hundred songs and ballads collected from the folk of that region as abundant evidence that they are right.

In his introductory pages Mr. Sharp tella land and its unknown people. There are, he says, between three and four million of these mountain folk scattered through a territory as large as France and possessing few roads-most of them little better than mounhardly touched these people. Time has for-gotten them. Very few can read or write but they are good talkers speaking an old-fashioned English without an American accent, and possessing, as Mr. Sharp well says, "that elemental wisdom, abundant knowledge and insuitive understanding which only those who live in constant touch with watere and face to face with reality seem to be able to acquire."

Economically these mountaineers are independent, each family extracting from its holding just what is needed to support life and no more. They have very little money, barter being the customary form of exchange. "They are immune," says Mr. Sharp, "from that continuous grinding mental pressure due to the attempt to 'make a living' from which nearly all of us in the modern world suffer. Here no one is 'on the make.' Commercial competition and social rivalries are unknown," And all this exists in the fourth year of the great war, and within a hundred miles of the White House in Washington!

As to the beauty and interest of the songs and ballads here published for the first time there can be no two opinions. To quote Mr. Sharp again, and no one speaks with greater authority on this subject than he: "It is my sober belief that if a young composer were to master the contents of this book, study and assimilate each tune with its variants, he would acquire just the education that he needs, and one far better suited to his re-quirements than he would obtain from the

ordinary conservatoire or college of music. That Mr. Sharp, who has done so much for the preservation of the fulk songs and folk dances of England, should now be carrying on his life's work in this country, is a face of first importance which future generations living in a kinder age than this will not fail to appreciate at its true value. The time will come, if there's a God in heaven, when our children will turn from the shameful history of these times to read with gratitude and delight of the saving of these beautiful songs—these faint, aweet echoes of old, for-gotten, far-off things. And in those happier days our children will hear around them—. in the streets and parks and fields, as well as in the concert halls and in their homesthe rich, new harmonies that will flow from these Appalachian wells of music undefiled. WALTER G. FULLER.

PRINCIPLES GOVERNING THE RETIREMENT OF PUBLIC EMPLOYEES

By Lewis Meriant. Published for the Institute for Government Research, 461 pp. Price \$2.75; by mail of the SURVEY, \$2.87. Most of us are familiar with the occasional American revolution which places in charge of a great social, public agency that rare citizen-a liberal who is an administra-His appointment means, so we think, a

progressive administrative program. A few months pass-let us assume, in the Department of Prisons-under the new dispensation, with little achieved beyond the reeducation of the American public, due largely to inefficient personnel, not only in the lower subordinate places, but particularly in the higher administrative offices. the spoils system has flourished or an inef-fective civil service law makes it easy for persons to enter the service through privilege, i. e., the back door to the house of the government, the personnel invariably repre-sents mediocrity, if not corruption, due to several causes, but especially to the immediate evil of superannuation.

Incapacitated prison guards hobble through their duties, "the old-time principal keeper furnishes the course of action and code of conduct in the treatment of the problems of this particular penitentiary.

In the absence of a scientific retirement system our "liberal" demonstrates that he is not free to act. He loses his detached "Ile-Man" attitude and maintains the personnel of the prison unchanged.

That is why every person interested in social service work or the competent exercise of such functions by governmental agencies should be grateful to the Institute of Government Research and Lewis Meriam for the present volume.

### APPROACHES

# TO THE GREAT SETTLEMENT

By EMILY GREENE BALCH

WITH AN IMPORTANT INTRODUCTION BY

NORMAN ANGELL

AND A BIBLIOGRAPHY OF BOOKS AND DOCUMENTS BEARING ON THE PROBLEMS INVOLVED IN APPROACHING A SETTLEMENT OF THE WAR

"For the first time the average American has an opportunity to read a complete statement about many peace activities that have been hitherto beclouded by bitter controversy. . . . It is a rich feast. . . . Indispensable not only to every student of international affairs, but to every citizen interested in securing a final settlement that will make for an enduring peace."

A.—Brown Bill.—Seante Introductory No. 118.—70 RELAX LABOR LAW
This bill gives the Industrial Commission power to suspend at its discretion any or all provisions
of the labor law relating to men, somen and children. The bill is identical with the bill which passed
the legislature last year, but was vetord by Governor Wilson.

It left to maintain industrial industri

### ACT IMMEDIATELY

Write to your Senator and Assemblyman regarding these bills. Ask your club and friends to write. If you do not know the names of your representatives, call up your Consumers' League. \_\_\_\_

As the result of an exhaustive study of the literature of the subject, the author points out the danger to the government, to the employe and to the public, of retirement systems not based upon investigation of social and actuarial problems of paramount importance. The book does more than this. It discusses and summarizes the important arguments for and against alternative lines of legislative action. Mr. Meriam is a fair and judicial reporter of the facts in the laboratory of pension experience with the additional quality that his pen gives life to an important but technical subject. One gets the impression that actuarial

science has been accepted as an exact science, and that there is no longer excuse for the government to vote pensions which provide pay given to a state hireling for treason to its country." The principles underlying the existing pension systems are delightfully described as "a perfect illustration of the legis-

### COST OF LIVING AND THE WAR

THE NEW YORK SCHOOL OF PHILANTHROPY 105 E. 22 St. Bulletin ready April 1

lative sins of the father visited upon the children unto the third and fourth genera-

In conclusion, the author declares in favor of the application of a retirement principle which will provide a system financially sound, will meet the needs of the service, and he just to the employes and to the public. Mr. Meriam believes, with considerable evidence to support his belief, that a scientific pension fund must be operated on a true actuarial reserve basis in preference to a cash disbursement plan.

Even those who disagree with his opinion on the form of contributions to the fund cannot but admire his candor when he states:

"Wish some misgivings and many reserva-tions, the writer is inclined to conclude that the partially contributory system is to be preferred to the wholly contributory."

As a text book on the subject this work will be of real value to members of constitutional conventions, state and city legislative bodies and that increasingly larger group of students who will find a full history and record of the development of the retirement problem. GEORGE T. KEYES.

THE FIGHT FOR THE REPUBLIC IN CHINA

By B. L. Putnam Weale. Dodd, Mead & Co. 485 pp. Price \$3.50; by mail of the SURVEY \$3.75.

This work is of a very different character from the other books that have made Putnam Weale so much respected as an authority on far eastern affairs. They professed merely to give the writer's own impressions, and they were marked by a refreshing freedom of utterance; this work is described as semi-official and is of the nature of special pleading, seeking to prove that, though Yuan Shih-kai was a scoundrel, the republic of China since his death has been a very marked success with brilliant prospects for the future. Likewise that Japan has been and still is pursuing a course of action not wholly dissimilar from that which has earned for Germany the emphatic reprobation of mankind. At the same time Mr. Weale is by no means intemperate in his criticisms of his own country's far eastern ally.

Mr. Weale's former works profess merely to assist in helping us to understand the problems of eastern Asia—and to that end they make a splendid contribution—but in is very first sentence we learn that "This volume tells everything that the student or the casual reader needs to know about the Chinese question," In spite of this rather unfortunate claim it is certain that the present work has a very special value; it is interestingly written; it presents us with many documents of real importance, several

of them never printed before. The book must have a permanent place on shelves devoted to the Far East.

The case against Japan which the work sets forth is based chiefly on certain mysterious documents alleged to contain the pro-gram of the Black Dragon Society of Japan, which some kind friend who preferred to remain anonymous mailed to the author. any conclusions based upon them can hardly any conclusions based upon them can harraly claim infallibility, though the papers in question do bear certain internal marks of genuineness, particularly in the light of the now famous Twenty-one Demands.

As to the Chinese republic and its bility, it cannot be pretended that Mr. Weale is particularly convincing. The chief facts that stand out on a perusal of his careful and, it must be added, very candid description of present-day conditions are: (1) That the republic has not up to the present changed anything very much except names, so far as the actual administration of the country is concerned; (2) That the corruption and inefficiency of the empire have not been eliminated or seriously reduced, but rather made worse than before; (3) That whereas the ancient constitution vested all authority in civil rulers, the republic has given all real power to soldiers.

The attacks on Dr. Goodnow, who before being called to the presidency of the Johns Hopkins University was legal adviser to the republic of China, are particularly unfortunate. Of course it does not very much matter what the government of China is called. The really important thing is that in setting her house in order to meet the conditions of this hour she should take every pos-sible advantage of that magnificent old theory of the state that lasted for four or five millenniums, that gave culture and peace and ordered rule to every land from burning Siam to the frozen Amnr, from the bare rocks of far Central Asia to the beautiful islands of Japan.

IAN C. HANNAH.

# French and Belgian Protestant Organizations

# Unite in Appeal to Christian America

N all the devastated regions of France there are Protestant Communities. Their sufferings are great. Their churches are destroyed. Their pastors are in the army or held as hostages. They have undergone bombardment and pillage and lived in caves of the earth. Their houses are destroyed, their gardens ravaged and their trees cut down.

At the breaking out of the war, there were over a thousand places of worship. Some of the losses sustained are shown in such figures as the following: Ministers and divinity students killed to Sept. 1, 1917, 58; ministers' sons killed, 102; damage to church buildings, one million dollars.

There is another entente than that of military forces. We are bound to France and Belgium by spiritual tics. Their sacrifices have been in our behalf, and are our beritage. Should not their sufferings become the burdens of our hearts?

The Huguenot churches have been in a large measure the soul of France, Christianity throughout the world owes them a debt which it can never repay, and which has been accumulating interest for centuries. But French Protestantism has a present and a future as well as a noble past. It weighs more than it counts. A message from over there tells us

that the work undertaken for sustaining these churches, building temporary places of worship, taking care of missionaries and deaconesses. looking after thousands of Protestant refugees, housing and feeding them, calls at once for \$2,000,000. This amount should be followed by another two million, in order that they may proceed effectively with their ultimate work of rehabilitation and reconstruction.

If our churches and Christian people want to do something effective, looking toward the reconstruction of Europe, they need not wait. They can do it now by maintaining these spiritual forces in France and in her dependent sister, Belgium, during this time of their awful

Protestant Union in France and Belgium Cooperates with United American Religious Agencies working in France through United Committee on Christian Service for Relief in France and Belgium constituted by

DIVISION eyes the civilian relief work in France done by Anne Morgan under the American Fund for French Wounded has led to a split in the organization. The work done for French soldiers will be continued under the old name. A new organization, the American Committee on Devastated France, into which Colonel Roosevelt and other prominent members have followed Miss Morgan, will work among civilian families in the army some.

GO TO BED an hour earlier on March 30 or you will miss an hour's sleep. Congress has passed the House version of the daylightsaving bill under which the clock will be put forward by one hour at 2 A. M. on the last Sunday of March and stay so until the last Sunday in October. All time-tables and appointments stand as they are written; only the clocks are moved.

BEST sellers must look to their laurels. This Side the Trenches, a booklet on the Home Service of the Red Cross, starts off with 800,000 copies on its first edition and is already reprinting. It is given away, to be sure, but each copy will go to an interested person-a member of one of the innumerable young people's societies of the Protestant churches, which are using it in their study classes. The author is Karl de Schweinitz, who has here made the motive and a bit of the technique of family case-worker understandable to beginners; and is printed in the very best-style of Douglas McMurtrie, whose typographical miniatures, such as this, are of the sort to invite the most indifferent render

THE New York State Association of Magistrates, at its recent annual meeting, adopted resolutions urging the following: Passage by the legislature of an amendment to the constitution providing for full equity juris-diction in children's courts and courts of domestic relations; an amendment allowing persons who plead guilty to waive indict-ment and have an immediate trial in the higher court; legislation allowing inferior criminal courts to commit persons alleged to be feebleminded to institutions where they can be observed, and granting the institutions power to apply to the higher courts for final commitment; a state-wide system of examining clinics for the feebleminded; adequate appropriations for enlarging institutions for juvenile delinquents and the techleminded, both male and female.

RURAL child and city child are about equally well off in the matter of health, according to the February Child Labor Bulletin, published by the National Child Labor Committee. In an article on The Draft as a Test of the Nation's Physical Stamina, Edward N. Clopper shows that the per cent of men rejected for physical reasons was exactly the same (26.6) for rural and urban districts. Recent studies of rural school-children have tended to prove that the coun-try child is not as healthy and robust as the city child, due largely to the fact that more measures have been taken by the cities for the preservation of children's health. The draft figures indicate, says Mr. Clopper, that the country boy is still holding his own but that he has no margin and that unless the rural districts follow the example of the cities in taking care of their children the cities will soon out-distance them.

THE death of Celia Parker Woolley re-THE death of Celia Parker Woolley re-moves a distinctive figure from Chicago's elder generation of social workers. After years of service as Julitarian smisster and as a writer, Mrs. Woolley late in life un-dertook the formidable task of establishing the Frederick Douglass Center at the heart of Chicago's "black belt" of population, of Chicago's "black belt" of population, traidence and presonally conduct his ter-teridence and presonally conduct and the termone, work with the concession of the tlement work, with the cooperation of the more progressive Negro people of the city. Almost single-handed and alone, however, Woolley assumed the responsibilities for the support and supervision of desperately needed ministries. She won the hom-It is widely hoped that her life work will be carried on by others, perhaps by the Chicago League on Urban Conditions Among Negroes, which has offices at the Frederick Douglass Center,

CHICAGO has been solicitous to secure a worthy successor to Joel DuBois Hunter as chief probation officer of her Juvenile Court. Prior to his coming, the attempt to make the appointment a partisan perquisite was foiled. Although the state Supreme Court had decided that it was under the jurisdiction of the judges of the Circuit Court and not within the classified list of the civil service law, the circuit bench immediately estabown. Its first result was the appointment of gible list from which his successor was to be appointed attracted the applications of several capable persons. At the head of the list was Wilfred S. Reynolds, superintendent of the Illinois Children's Home and Aid Society. He declined the appointment because the conditions of his acceptance, which were supported by Juvenile Court Judge Arnold, were not met by the Board of County Commissioners. Joseph L. Moss, the associate and assistant of Mr. Hunter, stood second on the list and has accepted the promotion. His successful administration of the details of that office for five years and his good relationships with the staff and the probation officers give him a thorough ex-perience for his higher function. He is a graduate of Northwestern University and of the Chicago School of Civics and Phil-anthropy, and has had long and close con-nection with the neighborhood work of the Gads Hill social settlement. It is hoped that the issue between the Juvenile Court and the county commissioners raised by Mr. Reynolds' declination will eventually lead to the increased appropriations and the better adjustment demanded by the extraordinary exactions and increasing volume of the court's work.

### THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

ASSOCIATES

#### KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corre-sponding officer, etc. [They are ar-ranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject clas-sifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphless supplied free or at nominal charges. Membership is not required charges. Membership is not required of those seeking information, but of-fers an opportunity for you to share spiritedly and seriously in your com-munity or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall en-deavor to get your inquiry into the right hands.

#### WARTIME SERVICE

"HOW the Survey can serve"

How she inbject of an informal conference held early in April, in our library, to which we asked the executives of perhaps twenty national social service organizations. The con-ference was a unit in feeling that as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the Survey was at the threshold of an opportunity for service such as has seldom come to an educational enterprise.

The development of this directory is The development of this arrectory is one of several steps in carrying out this commission. The executives of these organizations will answer questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands.

Listings \$3 a month for card of five lines (in-eluding one listing in SUBJECT INDEX by full aame and three by initials), fifty cents a month for each additional line. No contracts for less than three months. Additional charge of \$1 for each change of copy during three month period.

Information regarding women's work, vocational opportunities, social weighter legislation Mass; practical Iraining in lesitivional management through industrial departments. Reading jitus on women's vocationa.

# A Square Deal for the Crippled Soldier

When the crippled soldier returns from the front, the government will provide for him, in addition to medical acare, special training for self-support.

But whether this will really put him back on his feet depends

on what the public does to help or hinder.

In the past, the attitude of the public has been a greater handicap to the cripple than his physical disability. People have assumed him to be helpless. Too often, they have persuaded him to become so.

For the disabled soldier there has been "hero-worship;" for the civilian cripple there has been a futile kind of sympathy.

Both do the cripple more harm than good.

All the cripple needs is the kind of job he is fitted for, and perhaps a little training in preparation for it. There are hundreds of seriously crippled men now holding down jobs of importance. Other cripples can do likewise, if given the chance.

Idleness is the calamity too hard to be borne. Your service to the crippled man, therefore, is to find for him a good busy

job, and encourage him to tackle it.

Demand of the cripple that he get back in the work of the world, and you will find him only too ready to do so.

For the cripple who is occupied is, in truth, no longer

handicapped.

Can the crippled soldier—or the industrial cripple as well—count on you as a true and sensible friend?

RED CROSS INSTITUTE FOR CRIPPLED AND DISABLED MEN 311 Fourth Avenue New York City

To those interested in the tuture of our crippled soldiers the Institute will gladly send, upon request, booklets describing what is being done in the rehabilitation of disabled men. The cost of this advertisement is met by a special gift.
